[fol. 392] *Past Record*—A look at the records may be interesting in consideration of what may be the future trend of the vanadium business. Sales of V contained in ferro, with the V_2O_5 equivalent, for the first seven months of this year have been as follows:

Month	Contained V — Lbs.	Equivalent V_2O_5 Lbs.
January	13,503	25,660
February	14,930	28,380
March	64,792	123,130
April	44,895	85,320
May	10,968	20,840
June	4,519	8,590
July	10,566	20,080
Total	164,173	312,000

Sales of V contained in ferro, with the V_2O_5 equivalent, for the eight years we have owned the U.S. Vanadium Corporation, have been as under:

Year	Contained V Lbs	Equivalent V_2O_5 Lbs.
1927	163,870	311,350
1928	492,500	935,750
1929	345,220	655,920
1930	148,400	281,960
1931	158,710	301,550
1932	70,300	133,570
1933	286,410	54[illegible]180
1934 (est.)	229,200	435,400
Total	1,894,610	3,599,680

Sales of ferro-vanadium for the last five months of 1934 are estimated at 65,000 lbs. contained V or an equivalent of 123,400 lbs. V_2O_5. In addition to the total equivalent of 3,600,000 lbs. V_2O_5 sold in ferro 1,250,000 lbs. has been sold or is reserved for the Vanadium Corporation of America in fused vanadium oxide and 120,000 lbs. in odd lots of fused vanadium oxide, red cake and ammonium metavanadate were sold to the trade.

Total V_2O_5 sold in FeV	3,600,000 lbs.
Sold or reserved for VCA	1,250,000 "
Red Cake and Metavanadate	120,000 "
Total V_2O_5 sold	4,970,000 "

—3—

[fol. 393] At the risk of becoming tiresome, one more tabulation will complete the statistical picture. The tabulation below shows the pounds of V contained in all ferro-vanadium shipments made in the United States, by years, from 1927 to 1933 inclusive. The shipments of the U. S. Vanadium Corporation for each year and the proportion these shipments bear to the whole, are also given:

Year	Total lbs. V in FeV	U.S.V. Lbs. V in FeV	U.S.V.%
1927	1,236,570	163,870	13
1928	1,590,550	492,500	31
1929	1,494,290	345,220	23
1930	713,480	148,400	21
1931	515,220	158,710	31
1932	235,120	70,300	30
1933	747,630	286,410	38
	6,532,860	1,665,410	25

The proportional increase for 1933 is, probably, due to having obtained most of the U. S. Steel Corporation's business for that year. Half of this business was placed with the Vanadium Corporation of America during 1934. For estimating purposes it may be assumed that we will continue to get about 30% of the vanadium business.

Future Sales:

Mr. Priestley states, in his letter to Mr. Gormely, dated July 23, 1934, that no great increase in the use of vanadium can be expected over the next two or three years, but that the use may be expected to decrease. He, also, states that a very slight increased use of vanadium in castings is indicated.

It may safely be assumed that the total vanadium sales for 1934 will equal the 1933 total, or approximately 750,000 lbs. V in FeV, assuming our proportion of these sales as being 30%, then our 1934 sales will equal 225,000 lbs. which is, approximately, as we have estimated on Page 2. Assuming further, that improved business conditions, stimulating the steel industry, may offset the apparent decrease in the use of vanadium alloys, our vanadium sales may be estimated at approximately 225,000 lbs. V in FeV each year for the next two or three years. At least, we should be prepared to furnish this amount, and the situation will be watched closely for evidence of any change toward the upward side.

According to the above assumptions, the Vanadium Corporation of America will require about 1,000,000 lbs. V_2O_5 each year to carry their business. Our future sales to the VCA will, probably, be a question of price and we will, probably, be asked to continue furnishing them with V_2O_5

—4—

[fol. 394] as in the past year. The Peruvian Government reduced the export tax on vanadium products the latter part of June at the request of the VCA. The reduction re-established the old export rate in effect prior to 1930. The VCA are preparing to ship the 400 to 500 tons vanadium concentrates now in Grace & Company's warehouse at Callao. The contents of these concentrates is estimated at about 200,000 lbs. V_2O_5.

The present sales' contract with VCA expires April 1, 1935, and the V_2O_5 reserved for VCA in the estimate on page 1, takes credit for the full amount unfilled of the total order of 1,250,000 lbs. With the imports from Peru, the VCA requirements for 1935 will, probably, be 500,000 lbs. V_2O_5 additional only. For 1936 they should require 1,000,000 lbs.

Effect Upon Stocks:

It is estimated on page 1 that we will have an equivalent of 2,634,000 lbs. V_2O_5 on hand January 1, 1935. Of this amount approximately, 634,000 lbs. may be assumed as already worked up into FeV. The Columbiana operations to maintain stock against sales, will probably be 500,000 lbs. with an additional 500,000 lbs. possibly sold to VCA, the V_2O_5 stock will appear about as under on January 1, 1936.—

V_2O_5 On Hand 1/1/35		2,634,000 lbs.
" In FeV		634,000 "
Available V_2O_5 in Fused Oxide 1/1/35		2,000,000 "
1935 Sales FeV	500,000 lbs.	
VCA 1935	500,000 "	1,000,000 "
On Hand 1/1/36		1,000,000 "

It may be seen from the above that although sales might decrease somewhat, our entire stock of V_2O_5 in fused oxide will be exhausted in 1936 if we continue to supply VCA with their requirements.

Paradox Ore Reserves:

We own most of the known vanadium resources in the Paradox Valley. There is, measured and mined out on dumps on our property, a total of 148,170 tons of ore containing 5,300,000 lbs. of recoverable V_2O_5. In addition, we have partially developed by underground workings and core drilling, 225,000 tons containing 8,100,000 lbs. recoverable V_2O_5—

Developed and On Dumps, V_2O_5		5,300,000 lbs.
Partially Developed	"	8,100,000 "
Total		13,400,000 "

—5—

[fol. 395] There is, also, a prospective ore tonnage which is more or less problematical, but which can be reasonably estimated at, approximately, 10,000,000 lbs. recoverable V_2O_5.

There are a number of other properties in the Paradox Valley or vicinity which are, more or less in the prospective state. Two or three of these groups of claims are attractive from a production standpoint. No single group, however, at present has sufficient ore reserves to warrant the installation of a reduction plant. They are somewhat scattered, two groups being in the McIntyre District, and one group in Gypsum Valley.

Paradox Plant Plans:

Several conversations were had with the Vanadium Corporation of America last Spring in reference to making some kind of an arrangement for future production in the Paradox Valley. It was thought desirable to purchase the Naturita Plant of the VCA or make some other production arrangement with that company. From these conversations it was evident that VCA did not feel disposed to make

any kind of an arrangement which would not leave them pretty much in control of the situation. It was, also, evident that any purchase price for the Naturita Plant would, eventually equal the full amount of their investment. Our opinion was that the Naturita Plant was almost a total loss and that VCA would not have sufficient ore reserves to be in a position to dictate.

During the past Summer we have made a complete survey of the Paradox Valley situation, both as regards plant construction, salt and coal supplies, and VCA ore resources. During our conversations VCA has always maintained that they had readily available 3,000,000 pounds recoverable V_2O_5. Our survey of the situation discloses that they actually have, approximately, 220,000 lbs. recoverable V_2O_5 in developed and possible ore supply on property which they now own.

Preparation for production operations in the Paradox Valley will consist of provision for the mill, salt works, coal mine, mines and roads, and housing.

A survey of the VCA Naturita Plant discloses the fact that with the exception of the roaster installation the plant must be almost entirely rebuilt to put it in an efficient and satisfactory operating condition with regard to recovery and costs. The present plant was not a metallurgical success and the fused oxide produced therein was at a cost in excess of 75¢ per pound of V_2O_5.

Comparative estimates on reguilding the VCA Plant, and constructing a new plant on our own mill site, shows that the difference in cost will amount to about $65,000 as follows:

—6—

[fol. 396]

	VCA Naturita	USV Standard
Mill	$211,255.	$261,673.
Salt Works	14,091.	14,091.
Coal Mine	10,380.	16,687.
Mines & Roads	32,642.	39,739.
Housing	34,000.	34,000.
Total =	$302,368.	$366,192.

The estimate further shows that other equipment and supplies at the VCA Naturita Plant will amount to an additional $28,000 in favor of the Naturita installation.

The operation at the Standard mill site will be cheaper than at the Naturita site, the principal item in this estimate being the difference in ore haul. About 90% of our ore reserves are adjacent to the Standard mill site. Using the Naturita site this ore must be hauled an additional fifteen (15) miles. It is estimated that the saving in haul alone, at the Standard Mill site, will amount to approximately $125,000 for the known ore reserves; this figure will be about doubled when the prospective reserves are taken into account, since most of these are adjacent to the Standard site.

The Standard mill site location has been named "URAVAN" being a combination of the abbreviations for "uranium" and "vanadium". If a plant is constructed at that site it will, probably, be known as the Uravan Plant which will be the name of the Postoffice.

In regard to this plant site it might be added that the transportation facilities with the outside, will be greatly facilitated within the next year. The State and County are building a road down the Dolores River direct to Grand Junction which will greatly aid communications with the outside. The use of this direct road to Grand Junction will eliminate freight transfers to the narrow gauge railroad from Montrose to Placerville. This road will, also, make the distance 15 miles closer to Grand Junction than the VCA Naturita plant.

The logical location for a plant in the Paradox Valley, from a production standpoint, is this old Standard site on the San Miguel River, 15 miles below Naturita. It has the advantage, also, of 200 hydro electric horse-power already installed. Regardless of the plant location, however, this power will be utilized in the mining operations.

Although it may not be necessary to begin plant construction in the Paradox this Fall, there is certain preliminary work which can be done now to the best advan-

tage. This consists of re-installing the ditch and flume for the hydro electric power at the mine, the installation of salt works and, possibly, the opening up of a new coal mine.

The salt works and the power will be needed whether an arrangement is made with VCA or not. The water in the Dolores and San Miguel Rivers, this Fall, is lower than ever before known which would, probably, make the power

—7—

[fol. 397] and salt installation cheaper. It is estimated the salt works will cost, approximately, $14,000 and the power work is estimated at, approximately, $6,000.

There is not much work needed at the coal mine in order to get that in shape for equipment. This work would, probably, amount to about $2,000. We have an option on this coal property, expiring September 1st; and the price on this is $1,200. for the property. It contains an abundance of coal for our purposes and can be cheaply mined.

If an arrangement is made to use the VCA Naturita plant we would not need this coal mine, but one of the strong talking points of VCA last Spring, was the location of the coal at their plant. They do not intend to sell their coal mine with the plant, but figured that we would pay for their coal at approximately, $3.00 per ton. Owning the above-mentioned, attractive coal property would eliminate any such argument. We, also, think the price of $1,200 on this coal land is very much less than can be secured later on, if we build the plant at the Standard mill site. It is recommended that this coal property be purchased.

I have discussed with you the other work which I think best to do this Fall, and you have given your permission to proceed with it. The work of cleaning out the power ditch is now under way and the salt ponds will be constructed as soon as we have the right under our Government lease.

Although our present stocks of fused vanadium oxide are sufficient to satisfy demands until 1936, it would seem desirable to economically continue the construction of the Paradox Plant and have it in operation in 1935. By so

doing we can start production with a single unit plant and very slowly accumulate stock above our own needs, which will enable us to be on top of the vanadium situation as regards sales to the VCA, without making any immediate provision for a larger capacity plant.

It can be recommended that 15 or 20 men be employed at the Standard mill site continuously, doing the excavating and building the necessary roads, etc. which will have to be done before actual construction of the plant is begun. This working crew could have the power canal cleaned out, install one of the compressors from Rifle, prepare all foundations and put in the water supply, and be all ready for actual plant construction in the Spring of 1935. Under this plan expenditures would amount to from $3,500 to $5,000 per month.

Very truly yours,

EW/J.R.Van Fleet
IC

[fol. 398]

U. S. Vanadium Corporation, New York City.

August 10, 1934.

Mr. F. H. Haggerson,
Room 1715, Building.

VANADIUM SITUATION.

Dear Mr. Haggerson:

On January 1, 1934 we had in stock 3,461,000 pounds of V_2O_5 as fused vanadium oxide, and an equivalent of 642,000 pounds V_2O_5 in ferro-vanadium at the various plants—Rifle, Niagara, Columbiana and Welland—making a total inventory of 4,103,000 pounds V_2O_5 available

Fused V_2O_5	—	3,461,000 lbs.
V_2O_5 in FeV	—	642,000 "
Total V_2O_5 on 1/1/34	—	4,103,000 "

The above total available V_2O_5 is greater by 53,000 lbs. than the total given in my letter of January 30, 1934 due to a correction in the Niagara inventory figures used.

Up to August 1st for this year, sales have amounted to an equivalent of 795,200 lbs. V_2O_5 of which 483,200 lbs. were sold as fused oxide to the Vanadium Corporation of America, and 312,000 lbs. were contained in ferro-vanadium. There is yet to be delivered 550,400 lbs. V_2O_5 on the Vanadium Corporation order, and FeV sales for the last five months of this year may be estimated as containing an equivalent of 123,400 lbs. V_2O_5.

1934 Sales — Equivalent V_2O_5—		
Fused V_2O_5 to Aug. 1st		483,200 lbs.
V_2O_5 in FeV	—	312,000 "
Balance VCA order	—	550,400 "
V_2O_5 in FeV estimated 5 months	—	123,400 "
Total 1934 — — —		1,469,000 "

According to the above, on January 1, 1935, we should have available an equivalent of approximately 2,634,000 lbs. V_2O_5.

V_2O_5 on hand 1/1/34	4,103,000 lbs.
V_2O_5 Sales 1934	1,469,000 "
Jan. 1, 1935 Available	2,634,000 "

—2—

[fol. 399] *Past Record*—A look at the records may be interesting in consideration of what may be the future trend of the vanadium business. Sales of V contained in ferro, with the V_2O_5 equivalent, for the first seven months of this year have been as follows:

Month	Contained V — Lbs.	Equivalent V_2O_5 Lbs.
January	13,503	25,660
February	14,930	28,380
March	64,792	123,130
April	44,895	85,320
May	10,968	20,840
June	4,519	8,590
July	10,566	20,080
Total	164,173	312,000
Total	164,173	312,000

Sales of V contained in ferro, with the V_2O_5 equivalent, for the eight years we have owned the U.S. Vanadium Corporation, have been as under:

Year	Contained V Lbs	Equivalent V_2O_5 Lbs.
1927	163,870	311,350
1928	492,500	935,750
1929	345,220	655,920
1930	148,400	281,960
1931	158,710	301,550
1932	70,300	133,570
1933	286,440	544,180
1934 (est.)	229,200	435,400
Total	1,894,610	3,599,680

Sales of ferro-vanadium for the last five months of 1934 are estimated at 65,000 lbs. contained V or an equivalent of 123,400 lbs. V_2O_5. In addition to the total equivalent of 3,600,000 lbs. V_2O_5 sold in ferro 1,250,000 lbs. has been sold or is reserved for the Vanadium Corporation of America in fused vanadium oxide and 120,000 lbs. in odd lots of fused vanadium oxide, red cake and ammonium metavanadate were sold to the trade.

Total V_2O_5 sold in FeV	3,600,000 lbs.
Sold or reserved for VCA	1,250,000 "
Red Cake and Metavanadate	120,000 "
Total V_2O_5 sold	4,970,000 "

—3—

[fol. 400] At the risk of becoming tiresome, one more tabulation will complete the statistical picture. The tabulation below shows the pounds of V contained in all ferro-vanadium shipments made in the United States, by years, from 1927 to 1933 inclusive. The shipments of the U. S. Vanadium Corporation for each year and the proportion these shipments bear to the whole, are also given:

Year	Total lbs. V in FeV	U.S.V. Lbs. V in FeV	U.S.V.%
1927	1,236,570	163,870	13
1928	1,590,550	492,500	31
1929	1,494,290	345,220	23
1930	713,480	148,400	21
1931	515,220	158,710	31
1932	235,120	70,300	30
1933	747,630	286,410	38
	6,532,860	1,665,410	25

The proportional increase for 1933 is, probably, due to having obtained most of the U. S. Steel Corporation's business for that year. Half of this business was placed with the Vanadium Corporation of America during 1934. For estimating purposes it may be assumed that we will continue to get about 30% of the vanadium business.

Future Sales:

Mr. Priestley states, in his letter to Mr. Gormely, dated July 23, 1934, that no great increase in the use of vanadium can be expected over the next two or three years, but that the use may be expected to decrease. He, also, states that a very slight increased use of vanadium in castings is indicated.

It may safely be assumed that the total vanadium sales for 1934 will equal the 1933 total, or approximately 750,000 lbs. V in FeV. assuming our proportion of these sales as being 30%, then our 1934 sales will equal 225,000 lbs. which is, approximately, as we have estimated on Page 2. Assuming further, that improved business conditions, stimu-

lating the steel industry, may offset the apparent decrease in the use of vanadium alloys, our vanadium sales may be estimated at approximately 225,000 lbs. V in FeV each year for the next two or three years. At least, we should be prepared to furnish this amount, and the situation will be watched closely for evidence of any change toward the upward side.

According to the above assumptions, the Vanadium Corporation of America will require about 1,000,000 lbs. V_2O_5 each year to carry their business. Our future sales to the VCA will, probably, be a question of price and we will, probably, be asked to continue furnishing them with V_2O_5

—4—

[fol. 401] as in the past year. The Peruvian Government reduced the export tax on vanadium products the latter part of June at the request of the VCA. The reduction reestablished the old export rate in effect prior to 1930. The VCA are preparing to ship the 400 to 500 tons vanadium concentrates now in Grace & Company's warehouse at Callao. The contents of these concentrates is estimated at about 200,000 lbs. V_2O_5.

The present sales' contract with VCA expires April 1, 1935, and the V_2O_5 reserved for VCA in the estimate on page 1, takes credit for the full amount unfilled of the total order of 1,250,000 lbs. With the imports from Peru, the VCA requirements for 1935 will, probably, be 500,000 lbs. V_2O_5 additional only. For 1936 they should require 1,000,000 lbs.

Effect Upon Stocks:

It is estimated on page 1 that we will have an equivalent of 2,634,000 lbs. V_2O_5 on hand January 1, 1935. Of this amount approximately, 634,000 lbs. may be assumed as already worked up into FeV. The Columbiana operations to maintain stock against sales, will probably be 500,000 lbs. with an additional 500,000 lbs. possibly sold to VCA, the V_2O_5 stock will appear about as under on January 1, 1936.—

V_2O_5 On Hand 1/1/35		2,634,000 lbs.
" In FeV		634,000 "
Available V_2O_5 in Fused Oxide 1/1/35		2,000,000 "
1935 Sales FeV	500,000 lbs.	
VCA 1935	500,000 "	1,000,000 "
On Hand 1/1/36		1,000,000 "

It may be seen from the above that although sales might decrease somewhat, our entire stock of V_2O_5 in fused oxide will be exhausted in 1936 if we continue to supply VCA with their requirements.

Paradox Ore Reserves:

We own most of the known vanadium resources in the Paradox Valley. There is, measured and mined out on dumps on our property, a total of 148,170 tons of ore containing 5,300,000 lbs. of recoverable V_2O_5. In addition, we have partially developed by underground workings and core drilling, 225,000 tons containing 8,100,000 lbs. recoverable V_2O_5—

Developed and On Dumps, V_2O_5	5,300,000 lbs.
Partially Developed "	8,100,000 "
Total	13,400,000 "

—5—

[fol. 402] There is, also, a prospective ore tonnage which is more or less problematical, but which can be reasonably estimated at, approximately, 10,000,000 lbs. recoverable V_2O_5.

There are a number of other properties in the Paradox Valley or vicinity which are, more or less in the prospective state. Two or three of these groups of claims are attractive from a production standpoint. No single group, however, at present has sufficient ore reserves to warrant the installation of a reduction plant. They are somewhat scattered, two groups being in the McIntyre District, and one group in Gypsum Valley.

Paradox Plant Plans:

Several conversations were had with the Vanadium Corporation of America last Spring in reference to making some kind of an arrangement for future production in the Paradox Valley. It was thought desirable to purchase the Naturita Plant of the VCA or make some other production arrangement with that company. From these conversations it was evident that VCA did not feel disposed to make any kind of an arrangement which would not leave them pretty much in control of the situation. It was, also, evident that any purchase price for the Naturita Plant would, eventually equal the full amount of their investment. Our opinion was that the Naturita Plant was almost a total loss and that VCA would not have sufficient ore reserves to be in a position to dictate.

During the past Summer we have made a complete survey of the Paradox Valley situation, both as regards plant construction, salt and coal supplies, and VCA ore resources. During our conversations VCA has always maintained that they had readily available 3,000,000 pounds recoverable V_2O_5. Our survey of the situation discloses that they actually have, approximately, 220,000 lbs. recoverable V_2O_5 in developed and possible ore supply on property which they now own.

Preparation for production operations in the Paradox Valley will consist of provision for the mill, salt works, coal mine, mines and roads, and housing.

A survey of the VCA Naturita Plant discloses the fact that with the exception of the roaster installation the plant must be almost entirely rebuilt to put it in an efficient and satisfactory operating condition with regard to recovery and costs. The present plant was not a metallurgical success and the fused oxide produced therein was at a cost in excess of 75¢ per pound of V_2O_5.

Comparative estimates on reguilding the VCA Plant, and constructing a new plant on our own mill site, shows that the difference in cost will amount to about $65,000 as follows:

—6—

[fol. 403]

	VCA Naturita	USV Standard
Mill	$211.255.	$261,673.
Salt Works	14,091.	14,091.
Coal Mine	10,380.	16,687.
Mines & Roads	32,642.	39,739.
Housing	34,000.	34,000.
Total =	$302,368.	$366,192.

The estimate further shows that other equipment and supplies at the VCA Naturita Plant will amount to an additional $28,000 in favor of the Naturita installation.

The operation at the Standard mill site will be cheaper than at the Naturita site, the principal item in this estimate being the difference in ore haul. About 90% of our ore reserves are adjacent to the Standard mill site. Using the Naturita site this ore must be hauled an additional fifteen (15) miles. It is estimated that the saving in haul alone, at the Standard Mill site, will amount to approximately $125,000 for the known ore reserves; this figure will be about doubled when the prospective reserves are taken into account, since most of these are adjacent to the Standard site.

The Standard mill site location has been named "URAVAN"-being a combination of the abbreviations for "uranium" and "vanadium". If a plant is constructed at that site it will, probably, be known as the Uravan Plant which will be the name of the Postoffice.

In regard to this plant site it might be added that the transportation facilities with the outside, will be greatly faciiitated within the next year. The State and County are building a road down the Dolores River direct to Grand Junction which will greatly aid communications with the outside. The use of this direct road to Grand Junction will eliminate freight transfers to the narrow gauge railroad from Montrose to Placerville. This road will, also, make the distance 15 miles closer to Grand Junction than the VCA Naturita plant.

The logical location for a plant in the Paradox Valley, from a production standpoint, is this old Standard site on the San Miguel River, 15 miles below Naturita. It has the advantage, also, of 200 hydro electric horse-power already installed. Regardless of the plant location, however, this power will be utilized in the mining operations.

Although it may not be necessary to begin plant construction in the Paradox this Fall, there is certain preliminary work which can be done now to the best advantage. This consists of re-installing the ditch and flume for the hydro electric power at the mine, the installation of salt works and, possibly, the opening up of a new coal mine.

The salt works and the power will be needed whether an arrangement is made with VCA or not. The water in the Dolores and San Miguel Rivers, this Fall, is lower than ever before known which would, probably, make the power

—7—

[fol. 404] and salt installation cheaper. It is estimated the salt works will cost, approximately, $14,000 and the power work is estimated at, approximately, $6,000.

There is not much work needed at the coal mine in order to get that in shape for equipment. This work would, probably, amount to about $2,000. We have an option on this coal property, expiring September 1st; and the price on this is $1,200. for the property. It contains an abundance of coal for our purposes and can be cheaply mined.

If an arrangement is made to use the VCA Naturita plant we would not need this coal mine, but one of the strong talking points of VCA last Spring, was the location of the coal at their plant. They do not intend to sell their coal mine with the plant, but figured that we would pay for their coal at approximately, $3.00 per ton. Owning the above-mentioned, attractive coal property would eliminate any such argument. We, also, think the price of $1,200 on this coal land is very much less than can be secured later on, if we build the plant at the Standard mill site. It is recommended that this coal property be purchased.

I have discussed with you the other work which I think best to do this Fall, and you have given your permission to proceed with it. The work of cleaning out the power ditch is now under way and the salt ponds will be constructed as soon as we have the right under our Government lease.

Although our present stocks of fused vanadium oxide are sufficient to satisfy demands until 1936, it would seem desirable to economically continue the construction of the Paradox Plant and have it in operation in 1935. By so doing we can start production with a single unit plant and very slowly accumulate stock above our own needs, which will enable us to be on top of the vanadium situation as regards sales to the VCA, without making any immediate provision for a larger capacity plant.

It can be recommended that 15 or 20 men be employed at the Standard mill site continuously, doing the excavating and building the necessary roads, etc. which will have to be done before actual construction of the plant is begun. This working crew could have the power canal cleaned out, install one of the compressors from Rifle, prepare all foundations and put in the water supply, and be all ready for actual plant construction in the Spring of 1935. Under this plan expenditures would amount to from $3,500 to $5,000 per month.

Very truly yours,

EW/J.R.Van Fleet
IC

[fol. 405]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 67-F FOR IDENTIFICATION

General Mining Department. New York City.

Mr. F. P. Gormely, April 5, 1934.
Room 1715, Building.

VANADIUM SITUATION, and
VANADIUM CORPORATION OF AMERICA.

Dear Mr. Gormely:

On January 30, 1934, I sent you a memorandum covering the vanadium situation. The vanadium sales since January 1st have been about as estimated in this memo; ferro-vanadium sales to April 1st have been, approximately, 94,000 pounds contained V, and the sales estimate for this period was 85,010 pounds contained V in ferro.

The Vanadium Corporation of America has taken delivery of 457,223 pounds of V_2O_5, with an additional car to go forward on April 6th, making a total of approximately, 520,000 pounds of V_2O_5 against their option on fused oxide of up to 1,250,000 pounds V_2O_5 content.

The vanadium sales will be carefully watched for an indication of altering the policy for renewed production in the Paradox Valley. Any immediate change in this policy will depend upon whether the Vanadium Corporation of America will purchase fused vanadium oxide from us in 1935.

According to the schedule on Page 3 of my memo of January 30th it may be noted that we will have a stock of a little over 1,000,000 pounds of V_2O_5 at the end of 1935 if the vanadium sales for 1934 and 1935 are up to estimates. It is, therefore, certain that a plant should be in operation in the Paradox Valley before the end of 1935, under any circumstances. If the Vanadium Corporation of America

continues to purchase vanadic acid during 1935, the plant in the Paradox Valley should be producing by the middle of the Summer of 1935.

In many respects it would be desirable to erect a single roaster plant in the Paradox Valley this Summer, and be ready to increase this capacity when consumption warranted. This procedure would enable us to have worked out all of the treatment changes necessary for the Paradox ores, and put us in the position of knowing just what to do under any circumstances, and of being able to do so speedily.

[fol. 406] Negotiations have been carried on with the Vanadium Corporation of America for procuring their Rare Metals plant at Naturita in the Paradox Valley. In some respects it would be very desirable to get the Vanadium Corporation of America out of that field as their ownership of that plant will always be a menace and an invitation for production of ores from independently owned properties. The Vanadium Corporation of America do not own enough ore in the Paradox Valley to enable them to operate their plant successfully, but by encouraging the production of ore from outlying properties a considerable production of vanadic acid could be made.

As yet, the Vanadium Corporation of America has not signified their intention to continue purchasing oxide from us, nor have they placed a valuation on their plant. They have indicated that they do not wish to be "out of the picture" in the Paradox Valley. So far, I have offered two proposals for discussion, and the Vanadium Corporation has offered one. The proposals I have made depend entirely upon whether the Vanadium Corporation will continue to purchase oxide. The amount has been variously discussed at from 3,000,000 to 5,000,000 pounds over a period not to exceed five (5) years. The tentative price offered was ninety cents (90¢) per pound V_2O_5.

Proposal No. 1:

I proposed that the Vanadium Corporation purchase from us from 3,000,000 to 5,000,000 pounds of oxide over

a period of not to exceed five (5) years. The Vanadium Corporation would deliver their Paradox plant to us with the coal mine. We would purchase all ore from the Vanadium Corporation delivered to us at the plant, having a V_2O_5 of 2% or over.

We would pay them for the ore the difference between the cost of manufacturing the acid and the sales' price. For instance, if it cost 45¢ per pound V_2O_5 to process the ore then we would pay them the difference between the sales' price of 90¢ and the cost, or 45¢ per pound V_2O_5 contained in the ore. On a 2% ore with a recovery of 32 pounds V_2O_5 per ton, the amount paid for the ore would be $14.40 per ton. The estimated cost of delivering this ore to the plant is $6.00 per ton. The profit per ton to the Vanadium Corporation on their ore would, therefore, be $8.40 per ton. On higher grade ore the profit would be correspondingly greater.

The Vanadium Corporation has maintained that their properties contain an equivalent of 100,000 tons of 2% ore. At that rate they would net a total of $840,000. for their property, on their investment in the Paradox Valley of approximately $425,000.

This proposal has been discussed in detail and I think they are very much in favor of it, if they were sure they had the ore to deliver. I do not think the Vanadium Corporation really think they have 100,000 tons of ore of a commercial grade, and realize that they would not come out very well with only a small tonnage on this kind of a proposition.

[fol. 407]
Proposal No. 2:

As an alternative I submitted that the Vanadium Corporation would purchase from 3,000,000 to 5,000,000 pounds of oxide as in Proposal No. 1 above, and they would place a valuation on their plant which would be acceptable to us. We would then apply thirty cents (30¢) per pound of

V_2O_5 delivered, against the purchase price of the plant until the purchase price of the property had been satisfied.

They have not, as yet, discussed a valuation for their plant and property but would, probably, want to put it in at the amount of their investment. This would not be acceptable to us as a straight property value, but there may be other advantages in paying a high price for the property if it would result in their retirement from the field.

Proposal No. 3:

The Vanadium Corporation will desire to retain some interest in the Paradox Valley, if possible. They have proposed that we have a joint operation, using their plant. Under this plan they propose to sell us a half interest in the plant, retaining the coal mine.

They realize that we will have more ore to process than they will, and they propose that the Vanadium Corporation will sell coal to the joint operation and after all of their ore has been processed we will continue to process ore from our properties and purchase coal from them at an agreed upon price. The price suggested was $3.00 per ton. They would always retain a half interest in the plant and be able to process ores produced from other properties, which they might purchase.

It is estimated that requirements of coal for power and processing would equal about one (1) ton of coal for each ton of ore processed. With a price of $3.00 per ton on the coal the Vanadium Corporation would be making about $2.00 per ton which we would pay as a royalty for processing our ore in the plant in which we would own a half interest. This proposition, although discussed, of course we cannot seriously consider.

I have stated to the Vanadium Corporation that, in my opinion, the only basis that we can get together on is with the provision that the Vanadium Corporation will continue to purchase oxide from us, and that in case some such

arrangement cannot be made it would more to our advantage to erect our own plant on our own property.

I have stated that the difference in the cost of moving our plant from Rifle and altering the Naturita plant will have no bearing on the cost of producing acid in the Paradox. I called attention to the fact that a plant erected on our own site would be closer to our largest tonnage, and that there would be a corresponding saving in truck haul. The Vanadium Corporation understand that I am going West shortly and will look over the situation with these proposals in mind.

[fol. 408] If we are to erect our own plant in the Paradox Valley and have it in operation by the middle of next year, we should begin construction thereof this late Summer or early Fall. I think it would be wise when I return from the West to definitely state to the Vanadium Corporation that we are going to begin construction of a plant in the Paradox Valley. By that time the Vanadium Corporation will, probably, know whether they will want to continue to purchase oxide or not, and will probably, want to dispose of their Naturita plant.

Very truly yours,

EW/J. R. Van Fleet

PLAINTIFFS' EXHIBIT NO. 80 FOR IDENTIFICATION

January 19, 1943

Mr. G. B. Walker
Electro Metallurgical Co.
30 East 42 Street
New York City

Dear Sir:

Re: Vanadium for Canada

You undoubtedly know that the new allocation system in Canada resulted in our being eliminated from the Canadian market during the month of January. (Our customer, Atlas Steels Ltd., requested 4000 lbs. for shipment from us during January which you dropped from the list and replaced by ferro vanadium from your and Vanadium Corporation's production.)

Atlas Steels Ltd. has now applied for 5000 pounds of vanadium to be received during February and they insist that they want to receive our material.

Our attorney in Ottawa, Mr. Redmond Code, contacted Mr. Bateman today in order to find out whether these 5000 pounds from Continental Ore Company are included in your list for February.

Mr. Bateman was unable to give him this information and suggested to Mr. Code that we get in touch with you regarding this matter since your Welland firm is handling this matter under your direction.

We wish to say that we have these 5000 pounds of V *ready for immediate shipment* and expect you to let us ship this material to Canada as requested by our customer.

We will telephone you tomorrow morning in order to learn your reply.

Thank you for your cooperation.

Very truly yours

CONTINENTAL ORE COMPANY

Henry J. Leir

PLAINTIFFS' EXHIBIT NO. 81 FOR IDENTIFICATION

January 29, 1943

Mr. M. D. Arrouet
Electro Metallurgical Company
30 East 42nd Street
New York, N.Y.

Re: Vanadium for Canada

Dear Mr. Arrouet:

We wish to thank you for your telephone call of yesterday in regard to the above matter.

You requested us to contact the Electro Metallurgical Company in Welland and submit our offer to them.

You will admit that even if the new set-up in Canada covering the distribution of ferro vanadium has been temporarily sanctioned by the Canadian Metals Controller, such policy still is absolutely contrary to that of Washington.

Your firm and ours are competitors and there can be no question of our eliminating ourselves from the market.

Competitors can and should cooperate in emergency periods such as these, but this should not lead to collusion or coercion in a field which has already attracted the attention of the U. S. Department of Justice because of its monopolistic character.

We believe that our letter of January 19 addressed to Mr. G. B. Walker of your organization was a very fair one. We believe also that our suggestion to the WPB Vanadium Section that we ship the material we had prepared for our customer in Canada, thereafter withdrawing *voluntarily* from the Canadian market, was a very fair one.

Apparently Union Carbide considers itself so influential at the present time that it is trying to eliminate even the infinitesimal participation of an outsider in the vanadium market. However, we feel satisfied that such an attitude will not have the desired effect.

We want to thank you for the personal interest you have taken in this matter, and assure you that we will not forget it.

Very truly yours

CONTINENTAL ORE COMPANY

Re: Vanadium for Atlas Steels Ltd.

We received your letter of February 10 and wish to inform you that we have ready for shipment a quantity of 13,444 lbs. V which we intended to ship to Atlas Steels Ltd.

Our price is $2.40 per lb. of metallic V contained, FOB border.

The material is of the same quality as we have been supplying to Atlas in the past and we would suggest that we ship 5,000 lbs. of V this month, 5,000 lbs. of V in March and the remainder of 3,444 lbs. in April.

We would appreciate hearing from you.

Thank you for your kind cooperation.

Attention: Mr. H.J. Leir

Gentlemen:

With reference to recent correspondence regarding Vanadium Oxide for Atlas Steels Limited, Welland, your original letters indicate that you have prepared 5000 pounds of contained V for shipment on this account, and we are prepared to take in this quantity to apply on Atlas Steel's March quota.

We understand your price is $2.40 per pound of contained V, U.S. funds, f.o.b. Welland, Ontario in bond and that the material will conform to the following approximate analysis:

V_2O_5	—	78/82%
Fe_2O_3	—	14%
Al_2O_3	—	1%
TiO_2	—	2%
SiO_2	—	1%

and that the material is packed in containers containing approximately 15 pounds of V.

If you are prepared to accept on order the above quantity at the price and specifications afore mentioned, please

wire us so that we may arrange for release against the March quota.

Very truly yours,

Your Order No. EW-62287

We just received the freight bill for the above shipment (our invoice no. 5646) and learned that inadvertently this shipment was made to Atlas Steels Ltd., Welland, Ontario, Canada instead of to Electro Metallurgical Company of Canada, Welland, Ontario.

The mistake is due to the fact that our shipping department is accustomed to shipping all our vanadium for Canada to Atlas Steels, Welland and therefore failed to observe the change in instructions. A second contributing

factor to the error is that this material has been ready for shipment for more than two months and the boxes had already been stamped with the address of Atlas Steels.

We are extremely sorry that this oversight occurred but trust that this error will not inconvenience you.

Office of the Metals Controller
Department of Munitions and Supply
Ottawa, Ontario
Canada

Attention: Mr. C. B. Dawson

Gentlemen:

Re: Vanadium

We take pleasure in referring to a letter written to us by the Dominion Foundries and Steel under date of April 24 and of which you received a copy.

We understand that the Electro Metallurgical Sales Co. of Canada acts as your agent regarding the importation of vanadium products into Canada. We further understand, however, that this arrangement is not intended to create a monopoly with regard to the Canadian market and that

Electromet is required to follow the wishes of the Canadian steel mills as far as quality and supplier are concerned.

In other words, it is our understanding that if a steel mill requests, from your office, an allocation for a certain quantity of ferro vanadium and specifies the producer they wish to receive it from, Electromet is to follow these instructions.

As you can see from the copy of our letter to Dominion Foundries and Steel, dated April 21, our ferro vanadium is of a much higher grade than that produced by other manufacturers in this country and has, the same as our vanadium silicide, definite advantages, particularly with regard to its high purity.

These products are being manufactured in the Langeloth, Pa. plant of the Climax Molybdenum Co.

We informed a number of our customers among the Canadian steel mills that in order to obtain our high grade products they should request certain definite quantities of our material in their next allocations and we trust that we will be notified through the Electro Metallurgical Co. to ship these quantities so requested.

We would very much appreciate your confirming that the situation as described above with regard to the Canadian market is correct and that the procedure suggested by us is the one to be followed.

Very truly yours

Re: Vanadium for Canada

Gentlemen:

We refer to our previous correspondence and the order for 5000 lbs. of V contained in Van-Ex which we received from you at the beginning of March. We understand that Atlas Steels has requested various amounts of our material since that time but we have not received a new order from you.

We still have 6800 lbs. of vanadium contained in Van-Ex ready for shipment and would appreciate it if you could see your way clear to giving us an order so that we can ship this material to Canada. You will remember that we originally had about 12000 lbs. of V and this is the balance. We do not contemplate making any additional quantities.

We have prepared this material especially for Atlas Steels and it is certainly a pity to allow it to remain in a warehouse when it can be put to good use.

In any case, it would be better to ship this material to Welland now so that it will be ready for immediate consumption. If the quantity is too much for one month, we suggest that we bill it for June and July but it should certainly not stay here any longer.

May we hear from you?

Very truly yours

for Atlas Steels Limited

We refer to our letter of May 17, subsequent correspondence, and our telephone conversation with Mr. Bravin on June 11.

Since it was too late to do anything with regard to the 2,000 lbs. of V contained in our high grade ferro vanadium for delivery in June, we would appreciate your ordering this quantity from us for delivery in July, including this amount in your request to be filed with the WPB, Washington.

May we hear from you.

Very truly yours,

CONTINENTAL ORE COMPANY

Manager

500 Fifth Avenue,
New York, N.Y.

Attention: Mr. M. Wolf

Gentlemen:

I have your letter of June 29th with reference to Ferrovanadium. The situation at the present time is that we have a fairly good inventory of vanadium at Welland and this together with stocks in customer's plants does not justify our opening up any additional sources for this alloy.

We are amply protected for the future and therefore, regret that we are unable to place an order with you at this time.

Very truly yours,

ELECTRO METALLURGICAL COMPANY
OF CANADA, LIMITED,

/s/ C. S. BRAVIN
Vice-President.

Attention: Mr. C. S. Bravin, Vice-President

Gentlemen:

Re: Van-Ex for Atlas Steels Limited

Atlas Steels Limited have informed us that they have approached you regarding a quantity of 1,800 pounds of V contained in Van-Ex which we are desirous of shipping to them.

This quantity is the balance of the material especially prepared for Atlas Steels Limited and therefore we are forced to ship this material to this customer.

You will agree with us that this is not the time to leave any critical material idle and since Atlas is especially used to our Van-Ex, we asked them to accept it as a last shipment.

In other words, we are perfectly willing not to ship any more material, i.e. Van-Ex or high grade ferro vanadium, to them. You will, of course, realize that in making this proposal, we count on you to accede to Atlas' request, thereby cooperating with us to dispose of this balance.

Very truly yours,

CONTINENTAL ORE COMPANY

Gentlemen:

We have your letter of July 30 with reference to a quantity of 1800 pounds of vanadium contained in Van-Ex which you wish to dispose of to the Atlas Steels Limited, Welland.

The stock of contained V on hand at the present time is sufficient to take care of our customer's requirement for some time and it is not expected that we will be importing any additional quantities until present stocks are reduced.

Yours very truly,

ELECTRO METALLURGICAL COMPANY
OF CANADA, LIMITED

Re: 1800 lbs. Vanadium contained in Van-Ex

We refer to our previous correspondence and would very much like to know whether you are now prepared to take over this small quantity.

We would like to dispose of this balance at the earliest possible moment and would be willing to wait until November 30 for payment.

May we hear from you?

Very truly yours

Attention: Mr. H.J. Leir

Gentlemen:

With reference to your letter of September 23rd regarding 1800 pounds of vanadium contained in Vanex which you wish to dispose to the Atlas Steels Limited.

We will be very glad to take up this matter with you when vanadium is required for Canadian requirements in the future. However, as explained to you in my letter of August 2nd, the consumption of vanadium in Canada has decreased to some extent and therefore we do not anticipate making further importations until our inventories are worked down to a reasonable basis. This may be as late as December of this year or January of next year. However, we can assure you that we will not forget this quantity of vanadium which you desire to move when we make the next purchase.

Very truly yours,

ELECTRO METALLURGICAL COMPANY
OF CANADA, LIMITED,

October 5, 1943

Electro Metallurgical Company of Canada, Limited
Welland, Ontario
Canada

Attention: Mr. C. S. Bravin, Vice-President

Gentlemen:

Re: Van-Ex

Thank you for your letter of October 4.

We understand perfectly the reasons given for keeping this matter in suspense. However, we believe that we have shown our spirit of co-operation regarding the Canadian market and it would be most helpful to us if we could clear out this small lot at an earlier date. (Incidentally, the quantity is only 1600 lbs. of V contained, not 1800 lbs. as mentioned before).

May we suggest that you allow us to ship this material now, with the provision that we invoice it as of December for payment January 31, or, if it would be convenient for your Accounting Department, we could invoice it as of January 1.

This would allow us to liquidate our stock now and avoid the accumulation of further expenses.

Thank you for your kind cooperation.

Very truly yours,

CONTINENTAL ORE COMPANY

Gentlemen:

Re: Vanadium

We understand that although the allocation system for Ferro Vanadium in this country has been abolished, the set-up as concerns Canada, whereby you are buying vanadium for the entire Canadian Steel Industry, still continues.

We refer in this connection to our previous correspondence. We still have available material which we accumulated for export to Canada, and wonder whether you can release this material now.

May we hear from you?

Very truly yours,

[fol. 438]

IN UNITED STATES DISTRICT COURT

PLAINTIFFS' EXHIBIT NO. 109 FOR IDENTIFICATION

June 11, 1943

Electro Metallurgical, Welland

Called Mr. Bravin, Electro Metallurgical, Welland, Canada, with respect to the 2000 lbs. of V contained in ferro vanadium for Atlas. He said that it was too late to do anything for June and when I protested that this business should not depend on his being in Welland or not, he said that they had made their plans a long time ago and it would not have fit into the picture for June anyway.

He will see what he can do for July.

Pressed as to what his attitude would be, he took refuge behind Mr. Bateman saying that he depends entirely upon his decisions. I told him that we knew that whatever Electromet proposes will be acceptable to Mr. Bateman and that there is no reason why we should be cut off from a customer which we served for a number of years.

He said that the Canadian Govt. has spent quite a bit of money for this set-up and it seems that Mr. Bateman had made his plans without considering us.

I told him that, in other words, this would mean that Electromet monopolized the Canadian market. He thereupon that he in Canada does not make a single cent out of this set-up and that furthermore they are not alone in it since Vanadium Corp. is shipped to Canada too. Thereupon I told him that this is just what I understand under the term of monopoly.

I saw Arrouet in this connection. He conceded that Bravin is giving us the run around and furthermore agrees that it was not dignified or clever to do it this way. He emphasized that Bravin had been out of town but still this does not justify his methods.

Arrouet was very monopolistic this time too and expressed his astonishment that we were successful in getting so much vanadium anyway. He also mentioned that Climax would better stay out of this business because they could enter the molybdenum field too if they wanted and make trouble for Climax. They already have quite some quantities of molybdenum from their tungsten operation in Calif. which they are partly shipping as MoS_2 and partly roasting for making ferro.

I countered that in other words his picture of the world looked like this—God told Climax to make Molybdenum, he told Electromet to make vanadium, tungsten, ferro manganese etc. and Vanadium Corp. to make ferro vanadium and that nobody would be allowed to transgress the field.

He conceded that the tendency here in this country was approximately like that but that it could not be helped. As to the European market, it appears that Ugine had a contract with Vanadium Corp. for Peruvian vanadium ashes and also some vanadic acid but that Electromet too had a contract with Ugine since Vanadium Corp. could not supply all of Ugine's needs.

Incidentally, Arrouet remarked that we had promised not to go into the Canadian market again and now we had offered ferro vanadium. We said that if Bateman had taken over our 13,000 lbs. of V contained in Van-Ex which was the condition we imposed, we would have refrained from offering ferro vanadium.

February 28, 1950

Continental Ore Company
500 Fifth Avenue
New York, N. Y.

We have made an examination of your books, records and accounts for the year ended December 31, 1949.

We have verified the balances at the bank by direct correspondence with your depository. Cash on hand was counted and found to be in agreement with the ledger balance. Securities owned were not available for our inspection, but were verified by direct communication with the custodian.

Accounts Receivable were reviewed in detail for collectibility, but were not confirmed by direct correspondence with your customers. As at February 8, 1950, 99.4% of these accounts had been collected.

Merchandise Inventory, priced at cost, is carried herein at an amount submitted by the Company. We have satisfied ourselves as to the arithmetical accuracy and correctness of prices used.

Fixed Assets are stated herein at Cost. It is our opinion that the depreciation for the period under review is adequate.

No outside verification was made of liabilities.

In our opinion, the accompanying statements, subject to the aforementioned comments, present fairly the position of the Company at December 31, 1949 and the results of its operations for the year ended on that date.

David B. Jacobs & Co

Certified Public Accountants.

This contract is authorized by the following laws: Statutory Authority **** Title II of the First War Powers Act, 1941, Act of December 18, 1941 (Public Law 354–77th Cong.), and Executive Order No. 9001, dated December 27, 1941.

[fol. 518]

CONTRACT FOR SUPPLIES

THIS CONTRACT, entered into this 1st day of September, 1943, effective as of the 1st day of June, 1943, by the UNITED STATES OF AMERICA (hereinafter called the "Government"), represented by the Contracting Officer executing this contract, and UNITED STATES VANADIUM CORPORATION, a corporation organized and existing under the laws of the State of Delaware of the City of New York in the State of New York, (hereinafter called the "Contractor"), witnesseth that the parties hereto do mutually agree as follows:

ARTICLE I—SCOPE OF THIS CONTRACT

(a) The Contractor shall, with the utmost secrecy and dispatch, furnish and deliver to the Government, f.o.b. Contractor's plant at Uravan, Colorado, for a period of two years and such additional period or periods as the Government and the Contractor may agree upon except as provided under Article 8 hereof, sufficient B containing therein approximately C units of D and E units of F per month.

(b) The Government shall pay to the Contractor the sum of One Dollar and Ten Cents ($1.10) per G unit for the D contained in the B and thirty cents (30¢) per G unit for the F contained in the B.

(c) The Contractor shall at the expense of the Government, do all things necessary to ship the B to such location or locations as the Contracting Officer may direct.

(d) The meaning of code symbols B, C, D, E, F and G shall be as contained in Secret Letter dated June 1, 1943.

The contents of said secret letter are hereby made a part of this contract in the same manner as though fully set forth herein.

ARTICLE 2—SAMPLING AND ASSAY

(a) Specifications for the B are to be not less than ten percent (10%) D and the ratio of D to F shall be a ratio approximately five parts of D to not more than one part of F.

(b) The B will be sampled at the plant to which it is sent for processing. One sample shall be taken and this sample shall be divided into four parts, of which one part will be given to the Contractor, one part will be given to the processing plant and two parts retained by the Government. One part retained by the Government will be forwarded to the National Bureau of Standards for D and F assays. The result of this assay shall be considered final unless either party objects, in which event the reserve part retained by the Government shall be submitted to a mutually acceptable third party. The assay result so obtained will be final and binding on all parties.

Dated:

WAR DEPARTMENT

Contractor & Address	UNITED STATES VANADIUM CORPORATION 30 East 42nd Street New York, New York
Contract for:	Materials F and D
Amount:	Approximately $250,000.00
Location:	"E"
Payment: To be made by:	Finance Officer, U. S. Army, Knoxville, Tennessee.

The supplies and services to be obtained by this instrument are authorized by, are for the purposes set forth in, and are chargeable to the following procurement authorities, the available balances of which are sufficient to cover the cost of the same:

8-25562 P110-08

This contract negotiated and executed under the First War Powers Act, 1941, and Executive Order No. 9001.

Jul 15 1944

[fol. 522] THIS CONTRACT entered into this 26 day of June, 1944, effective as of the 10th day of July 1943, by and between THE UNITED STATES OF AMERICA (hereinafter called the "Government"), represented by the Contracting Officer executing this contract, and UNITED STATES VANADIUM CORPORATION, a corporation organized and existing under the laws of the State of Delaware, of the City of New York, in the State of New York, (hereinafter called the "Contractor"),

WITNESSETH THAT the parties hereto do mutually agree as follows:

ARTICLE I—SCOPE OF THIS CONTRACT

1. The Contractor agrees to sell to the Government and the Government agrees to purchase from the Contractor upon the terms and conditions hereinafter set forth, sufficient S-2 from the Contractor's stockpiles at Location E, consisting of approximately 150,000 L Units of S-2 with such quantities added to the stockpiles as may result from accumulations of S-3, during the term of this contract, to fulfill the requirements of the Government GU plant at Location E during the period July 10, 1943 to July 1, 1944, with prior right to the Contractor to withdraw any quantities of S-2 required to fulfill other commitments with the Manhattan District. The Contractor further agrees to

sell to the Government from and after July 1, 1944, the S-2 remaining in such stockpiles with such quantities added to the stockpiles as may result from accumulations of S-3 during the period until termination or completion of Contract No. W-7405 eng-32, upon the same terms and conditions as hereinafter set forth, subject to the right of the Contractor to withdraw from said stockpiles any S-2 that may be required by it to fulfill other commitments it may have with the Manhattan District, Corps of Engineers, requiring the use of said S-2. The Government reserves the right to reject any portion or quantity of S-2 which the Contractor may offer.

2. The Government shall take deliveries of such S-2 at the site of said stockpiles at the Contractor's plant at Location E, commencing on the date on which the operation of the Government GU plant at Location E shall start and continuing thereafter at the average rate of approximately 150 L units per day until July 1, 1944, and thereafter at such rate as the Contracting Officer deems necessary for the operation of the Government GU plant and the Contractor's GP plant, both at Location E, in accordance with the terms of Contract No. W-7405 eng-32.

3. The S-2 purchased under Section 1. above shall be processed in accordance with the provisions of Contract No. W-7405 eng-32, as amended, either in the Government GU plant or in the Contractor's GP plant, both on Location E. The residues that may result from such processing shall become the property of the Government. The resultant GU and GP shall be shipped in accordance with directions of the Contracting Officer at the Government's risk and expense to the Government's BJ plant at Location T. Records of weight of all GU and GP shipped from Location E shall be available both to the Government and to the Contractor. This material so shipped shall be processed to BJ and W in the Government's BJ plant at Location T. Payment for the S-2 purchased under Section 1. above shall be made on or before the 25th day of the second month following the receipt of the GU and GP at the BJ plant at Location T on the basis of Sixty Cents ($.60) per N Unit of D recovered in the form of BJ and

Sixty-Two Cents ($.62) per N Unit of F recovered in the form of W in accordance with the provisions of Article III below.

January 26, 1944

Imperial Paper and Color Corporation
Pigment Color Division
Glens Falls, N. Y.

Attention: Mr. A. F. Brown, General Manager

Gentlemen:

Lead Vanadate

My trip to Washington last week was delayed since I could not make all the appointments I wanted to; and therefore I had to postpone it until yesterday.

I saw the competent gentlemen in Metals Reserve and WPB and they confirmed that the sample of 25 pounds of the South African lead vanadate has been ordered shipped and is most probably in transit.

I further learned that about 900 tons of this material will arrive early in February, and in this connection we would very much like to discuss an idea with you which we believe would be of great importance.

We wonder whether you intend to be in New York one of these days, or early in February so that we may discuss this matter in detail.

Flue Dust

Mr. Johnson was in our office yesterday and offered us a lot of 8 to 9 tons of flue dust of 13.11% V_2O_5 content.

This would correspond to about 2200 lbs. of V_2O_5 contained, and it is our opinion that we should buy this lot for you at the price of 45¢ per pound of V_2O_5 so that you can start your tests on an industrial scale without further delay.

We will shortly send you a description of the process for treating lead vanadate and you will find that the kiln you have and which Mr. Leir saw when you showed him your equipment, can most likely be used for the treatment of lead vanadate and flue dust, interchangeably. This, of course, would make things very simple for you.

We will call you tomorrow in order to discuss this matter and if you agree, we will buy these 8 or 9 tons of flue dust for immediate shipment to you.

Very truly yours,

CONTINENTAL ORE COMPANY

Manager

Dear Mr. Wolf:—

You will remember about ten days ago we told you that we had on hand some Vanadium Oxide that analyzed about 15% metallic iron and 75.7% V_2O_5. You asked us to send you a sample representing this material, and we are forwarding to you today about one pound of this fused Vanadium Oxide X-521, representing approximately 2600 pounds,

which is batch U-15074. It is our understanding that you will submit this to one of your clients, and if you can obtain an order on it, we will invoice it to you at $1.10 per pound, it being our understanding that you will offer it to your customer at the present market of $1.20 per pound.

Awaiting your report, and trusting that we may receive an order for it, we are

Re: Fused Vanadium Oxide

Dear Mr. Brown:

We have your letter of December 29th.

Our customers are not too keen on the change-over from Ferro-vanadium to fused Vanadium Oxide although they had used the oxide during the war.

They have not definitely declined either but during this holiday period we cannot do very much useful pushing and we feel that if you have any other leads, we suggest you go ahead.

If our customer should decide eventually to use this material, we will just have to take our chances on its availability.

Kind personal regards for a very Happy New Year to you and your family.

Yours very truly,

Martin Wolf, Manager

New York 18, N. Y.

Dear Mr. Wolf:—

Replying to your letter of April 6th regarding a ton of V in the form of Fused Vanadium Oxide, we are sorry to tell you that we do not have any of this material on hand at the present time. We have been producing small quantities, but we made a shipment to Allegheny Ludlum a few days ago, and it will be six to eight weeks before we have any more available, because our labor situation is so tight, that processing of anything which we can defer is being handled on that basis at the present time, as we are shorter of men now than we have been at any time since the war started.

Regretting that this is the condition, we are

January 29, 1944

Imperial Paper and Color Corp.
Pigment Color Division
Glens Falls, N. Y.

Attention: Mr. A. F. Brown, General Manager

Gentlemen:

Re: Lead Vanadium from South Africa

We have your letter of January 21 and wish to say that the figures on Page 635 of the Minerals Yearbook, 1940, Revision of 1939, refer to metric tons of metallic vanadium (V) contained.

Therefore, total shipments from Southwest Africa, listed as being 514 metric tons V contained, correspond to 1,132,856 pounds of V contained, which is roughly 95,000 pounds of metallic V per month.

The Otavi material alone at the present rate of production amounts to:

200 tons per month of 9% V_2O_5 average,
equaling 36,000 lbs. V_2O_5 or 20,000 lbs. of V per month.

There are other sources in South Africa, as well in Northern Rhodesia, so that this origin alone should be a safe basis for operations.

This does not take into account any flue dust to be obtained locally here, nor any other vanadium-bearing materials from South America, particularly Peru and from Central America, particularly Mexico.

Very truly yours,

CONTINENTAL ORE COMPANY

Manager

CONFIDENTIAL

Re: Metals Reserve's Stock
of Lead Vanadate

Dear Mr. Brown:

A friend of ours at Metals Reserve suggested that since we cannot make further purchases of the Otavi lead vanadate at the present time, we should write something to them in order to keep this matter open in their files. You know that we are urging them not to sell it to any other parties, but to keep it until you are ready to proceed.

Such a letter, therefore, should point out that your process for recovering vanadium pentoxide has been perfected and that you are eager to go ahead. However, things have been held up because of the present manpower shortage, and as soon as there is a change in the present labor situation, you intend to proceed with the vanadium production on a substantial scale.

Of course, this letter should not mention anything about Metals Reserve, but should just be a spontaneous letter to us.

May we hear from you?

Very truly yours,

CONTINENTAL ORE COMPANY

Manager

WILLIAM B. BAEHR, SEC'Y-TREASURER

May 11th, 1943

Mr. Henry J. Leir
Continental Ore Company
500 Fifth Ave.
New York, N. Y.

Dear Mr. Leir:

We have for acknowledgment and thanks your letter of May 5th, together with copies of letter to you from Wade, Curran and Company, Farmington, New Mexico and your reply to them regarding carnotite concentrates which they offer for sale. We are quite familiar with this situation as we have every reason to believe that some of this ore came from claims on which we believe we hold title. This, however, was disputed by the gentleman whom they mention as recently having died, and the matter is now in the hands of the attorneys.

In the writer's phone conversation with Mr. Wolff on April 12th, he told you that owing to labor shortage that the operations of our mill had stopped. We first lost our chemist and then 5 of the key men and we have not since been able to replace any of these men. We are sorry to have to tell you that the mill has not been operated since then and at the present we cannot hazard any guess as to when operations will be resumed.

We have retained all of the men and are using them in mining and development work and we are continuing to mine ore which is being sold as raw ore to the Metal Reserves Corporation.

We shall advise you as soon as we see any change in the present situation.

Very truly yours,

/s/ W. P. Hendricks

[fol. 534]

In United States District Court

Defendant Union Carbide's Exhibit No. U-3-T

December 8, 1943

North Continent Mines
Metals Reserve—Vanadium

Called Mr. Hendricks, who apologized for not having answered our letter of November 20 because he was out of town.

At present there is no change contemplated with regard to their operations of North Continent Mines.

They are selling their vanadium ore to Metals Reserve via Vanadium Corporation of America. They realize more for the ore than they would if they made vanadic acid. Incidentally, they have no men to operate the mill even if they wanted.

He asked us if we are still in the market for vanadic acid and I told him that we are. I told him further that the price is $1.10, unchanged, and he remarked that he is much better off if he sells the ore.

He does not know how much longer his contract with Metals Reserve runs.

He promised to let us know whenever conditions change particularly with regard to a possible reorganization of the entire concern in case it would affect North Continent Mines proper.

Gentlemen:

Re: 10,000 lbs. of V contained
in Vanadium Concentrates

We refer to our telephone conversation of this afternoon and duly noted that the above quantity which was allocated to us by the WPB will be ready for shipment within a few days.

Please ship this material to:

Continental Ore Company
c/o Climax Molybdenum Co.
Langeloth, Pa.

Since this material originates in Columbiana, Ohio, we kindly ask you to ship by truck which insures the speediest delivery.

Our insurance policy requires that for truck shipments the value is to be declared as being minimum $50 per shipping package (bag or drum) and we would appreciate your mentioning this in the bill of lading.

Thank you for your kind attention.

Very truly yours

April 29, 1943

Electromet
Climax
Metals Reserve V

Spoke to Mr. O'Heir of Electromet. He believes that they are shipping today 5,700 lbs. of V contained by truck from Columbiana to Langeloth. The balance should also go out today from their plant at Alloy (? W. Va. ?).

They had some trouble and could not get out the entire quantity as they had intended earlier this month.

I then spoke to Mr. Donald R. Harrison, Works Manager.

He believes that the material is about ¼" in size. They have grinding facilities but these are taxed to capacity at the present time. However, he would look into this matter and see whether they could grind our material in the future to 10 mesh.

mw/sk

[fol. 540] April 29, 1943

Mr. Donald R. Harrison, Works Manager
Electro Metallurgical Sales Co.
30 East 42 Street
New York, N. Y.

Dear Mr. Harrison:

Re: Vanadium Pentoxide

We refer to our telephone conversation of this morning and wonder whether, for future shipments to us, you would be in a position to grind the vanadium concentrates to about 10 mesh size with not too many fines (below 80 mesh).

We would very much appreciate your looking into this matter and letting us have your news at your earliest convenience.

Thank you for your cooperation.

Very truly yours

Gentlemen:

Re: Invoice No. 24892
April 30, 1943.

This replies to your letter of May 11th on the subject of the above invoice covering a shipment of vanadium oxide.

The price of $1.15 per pound of contained vanadium oxide is our regular price to any one for spot purchases of vanadium pentoxide in quantities of 500 pounds or more.

We trust that this will answer your question concerning the price included in the above mentioned invoice and that it will be passed for payment as rendered.

Very truly yours,

ELECTRO METALLURGICAL SALES CORPORATION

Attention: Mr. W. E. Remmers

Gentlemen:

Re: Invoice No. 24892/April 30, 1943

We received your letter of May 18 and wish to say that the WPB, Washington, made out the allocation for 10,000 lbs. of V contained in vanadium pentoxide in your name only because there was no material available at the Durango plant of the Metals Reserve from where we had received material previously.

All our material from Metals Reserve was invoiced at $1.10 per lb. of V205 contained, delivered our plant, and we had no reason to expect that we would be charged any other price.

Furthermore, these allocations will be continued either from Durango or from you and we believe that under these circumstances you will charge us the same price that we had agreed to pay to Metals Reserve since this was our definite understanding with them.

May we hear from you?

Very truly yours

Attention: Mr. M. Wolf

Gentlemen:

This refers to your letter of May 19th on the subject of invoice #24892 dated April 30, 1943.

The price of $1.15 specified on the invoice is that which applies to all spot sales of vanadium oxide in quantities of 500 pounds or more made to any one. This price has been established for a number of years and we do not believe that we would be justified in making any special concession in the nature of a price reduction for such material.

We trust that with this explanation you will authorize payment of the invoice as rendered.

Very truly yours,

ELECTRO METALLURGICAL SALES CORPORATION

Attention: Mr. Walter E. Remmers

Gentlemen: Re: Invoice #24892 April 30, 1943

We received your letter of May 20 and can only repeat what we told you in ours of May 19 regarding the price which we expected to pay in view of our previous dealings with Metals Reserve.

We never did receive a contract from you and therefore had no reason to assume that your price would be any different from that which we paid for the previous material shipped through you from Metal Reserve's stocks.

However, we believe that we can overcome this difficulty in price resulting from the difference between spot and contract sales. We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present, these requirements are estimated to amount to about 10 000 lbs. of V contained in pentoxide per month. This contract, at the usual price of $1.10 per lb. of V contained delivered, could then be considered as applying to the lot shipped in April.

We hope that you can cooperate with us along these lines and look forward to hearing from you.

Very truly yours

Attention: Mr. W. E. Remmers

Gentlemen:

Re: Fused Vanadium Oxide

We refer to our previous correspondence regarding the price of the lot you shipped to us against WPB's April allocation.

If it is difficult for you to apply the price of $1.10 because no contract has been signed by either party, we feel that the only thing to do is to put at your disposal a like amount of fused vanadium oxide so that the entire transaction can be written off. In other words, we would replace the material shipped to us. This can be done by putting at your disposal a like amount out of the production of Nisley & Wilson for which we hold a contract with Metals Reserve at $1.10 and which has been allocated to us.

May we hear from you?

Very truly yours

[Letterhead of Electro Metallurgical Sales Corporation, New York, N. Y.]

June 1, 1943.

Continental Ore Company
500 Fifth Avenue
New York, N. Y.

Attention: Mr. M. Wolf

Gentlemen:

We have your letter of May 27th as well as one written on May 26th by Mr. Henry J. Leir.

Although you propose to make a replacing shipment of fused vanadium oxide, Mr. Leir has advised us by way of our Long Island City Accounting Office that you are remitting on the basis of $1.10 per pound contained. In order to close the file on this subject, we are accepting your check representing payment for 17,898.6 pounds of vanadium oxide at $1.10 per pound as payment in full.

We wish to point out, however, that this adjustment in price is for the purpose of closing our present discussion and in no way establishes any precedent so far as future business is concerned. As we have indicated in our earlier correspondence, the established price on spot sales in the quantities under discussion is $1.15 per pound.

We are issuing a credit memorandum to adjust the original invoice from $1.15 to $1.10 per pound.

Very truly yours,

ELECTRO METALLURGICAL SALES CORPORATION

Re: Vanadium

Gentlemen:

This is to refer to our last conversation, at which time you informed us that you did not anticipate re-opening your mill.

As we have not heard from you since, we assume that you are still shipping crude ore.

The pleasant relationship which we always maintained with you prompts us to submit the following:

We would not like to see your mines and mill pass into other hands, which might perhaps be competitors of ours in the vanadium field.

Some conversations which we had with some friends of ours lead us to think that there is a possibility of concluding a deal with you regarding your property whenever

you want to dispose of it. Substantial down payments would be no obstacle, and should you wish to maintain a share in the business rather than sell outright, this too, would be acceptable.

Will you be good enough to tell us whether you expect to reopen the mill in the not too distant future, or whether you would like to make some sort of a deal, in which case we would appreciate it if you would let us know your terms.

We look forward to hearing from you.

Very truly yours,

Gentlemen: RE: FERRO DEPARTMENT

It appears that the main reason for your wanting to get rid of the Ferro business is your need of space for another essential war production. However, it seems that you are completely overlooking the fact that Ferro Vanadium is another very essential war item, and that your position in this field has been fully recognized, as you can see from the letter of Mr. Edwin K. Jenckes, Assistant Chief Vanadium Branch, War Production Board, Washington, D. C., dated February 11th.

This letter to you, and a similar letter to us under the same date (Reference 40-EKJ-1540-R), are the direct result of our intervention with Mr. Donald M. Nelson, who referred the matter to Mr. Jenckes for proper attention.

When Mr. Wolf visited you on January 28th, you mentioned that your relations with Mr. Jenckes' office were not at all satisfactory, which also appeared from his remark over the phone that you should hire someone who knows the vanadium business.

All this is now different, and we daresay that this intervention through Mr. Nelson has obviously changed Mr. Jenckes' attitude. Our demarche ended with a major success for Apex Smelting and therefore for us too.

This changed attitude will facilitate our obtaining part of the new output from the new big vanadium plant in Monticello, Utah, and we even foresee that Mr. Jenckes will automatically make such allocations to you.

Whereas there are about 28 or 30 large remelters of aluminum in the country, you will find only:

3 producers of Ferro Vanadium
2 " " Manganese Metal
4 " " Ferro Tungsten

including Apex.

Also, Chicago has a much better strategic position than any other plant making the above materials, in either the Pittsburgh district or Niagara Falls.

You mentioned that you have labor trouble. The fact exists, however, that two other firms are producing the same material. You know yourself that the fumes during the smelting can easily be taken off by a proper fan, and the construction of the long promised baghouse will also help in this respect. The dust from the grinding and mixing operation can be eliminated by performing this operation in a closed apparatus; this should be done not only for health reasons, but also to reduce losses of material. Besides, it is very easy to arrange to have Risley & Wilson and Blanding ship you only ground material, as Shattuck does.

Defendant Vanadium Corporation of America's Exhibit No. V-2-A

603

[fol. 573] As for the deficit in the Ferro department, I really thought that you would not bring up this point again, because I considered it completely settled in our last discussion in Chicago on November 1st and 2nd.

The points which disprove this argument are the following:

A. The Ferro department which (according to the contract) should allow the production *of a complete line* of thermit process metals, has never had the necessary equipment. As late as February 28, 1941, when I was in Chicago, you showed me the grinding equipment for the aluminum, which, however, was not completed even at that time.

B. A good part of the losses resulted from the use of the aluminum-tin foil scrap.

C. Must we remind you that your own attitude seriously handicapped the development of the Ferro department? There was a time when you did not let us buy vanadic acid for fear of not selling the Ferro Vanadium; and you did not want to let us sell the Ferro Vanadium for fear of not acquiring the necessary raw material.

D. We told you that we are on the best of terms with Latrobe Electric Steel, and we recommended in March, 1941, that we increase the price of the contract for Ferro Vanadium. However, (see your letter of March 17th), you did not approve. Result: lower earnings.

You have promised us a "new" plant for quite some time. You showed us plans (flow sheets) and mentioned that the new plant would definitely result in a lower production cost. We spoke about this new plant in Chicago on:

February 28, 1941
March 27 and 29, 1941
May 26/27, 1941
August 23/24, 1941
September 24/25, 1941

In consideration of such a new investment, we arrived at an agreement as to a change in the old arrangements, and you expressed your complete satisfaction with our attitude.

Finally, you wanted to make things simpler for yourself, and suggested a new arrangement with the Continental Ore Corporation, replacing the old one with Fredet Kuhlmann with a new one by which the Continental Ore Corporation would have to satisfy all demands of the French partner.

It was also understood that the new investment would entitle you to a quicker amortization. In other words, I really endeavored to be a good sport. I want to remind you, at this point, that on a previous occasion I gave up an arrangement between you and Luxemburg regarding the production of metal powder, and that I also brought about your cooperation with Mr. Leute at a moment when he was on the point of signing up with the U.S. Reduction Company.

I am disregarding the fact here that upon the outbreak of the war in Europe (September, 1939), you had not moved at all according to the contract concluded in July, 1938. I must remind you that if the Ferro department had been ready at that moment we would have been the beneficiaries of export prices of $3.50 and more per pound Vanadium.

[fol. 574] In our last conversation in Chicago on November 1st and 2nd, you urged us to increase the price of Ferro Vanadium to $2.80, and we promised you not to sell any more below that price. On December 19, 1941, we informed you of the conclusion of the contract with Latrobe, and you acknowledged receipt of our letter by yours of December 22nd (this is in answer to your letter of February 10th, in which you mention that you have not authorized or accepted any contract from the Latrobe Electric Steel Company).

The cessation of the Ferro production would be a slap in the face to Latrobe, for instance, and we must remind you that Mr. Zenk of Latrobe made several interventions with Mr. Jenckes' office, and particularly praised the quality of your material. Latrope is one of the biggest users of Vanadium in the country. They are excellent customers, not only now, but in peace time as well, and they will not

hesitate a moment to introduce us to other steel mills the moment we have sufficient material available.

You know yourself that wherever your Vanadium 70-80% has been shipped, we received new orders. Of course it is important to maintain contacts with the customers just now, during the emergency, if we expect them to give us orders in normal times.

Now, during the biggest battle of production which the U.S. has ever passed through, is the proper moment to build up new business, and every shipment today means preparation for peace time business. Even if we had no contract at all with your firm, you could not let us down just now, thereby wasting all the honest and successful efforts we have made over a period of more than 3 years. It is not our fault that you treated the Ferro department as a stepchild from the very beginning. If your set-up for the Ferro department were as modern as it is for the aluminum department, we could have already been in the production of Manganese Metal, for instance. You know that we suggested trials to you in the beginning of last year, when we also suggested the production of Ferro Columbium.

The moment you have organized an adequate Ferro department, we will have enough business on hand, even without a pound of vanadic acid, viz. tungsten, manganese metal, which can be produced in quantities of 100,000 pounds a month and even more.

However, everything is now much easier for you because of the intervention of Mr. Nelson in favor of the maintenance of the Apex Smelting Company as producers of Ferro Vanadium, whereby he clearly showed that he does not want to have a vanadium monopoly exercised by the two big producers.

This was one of our arguments in contacting Mr. Nelson, and as you see, he agreed completely.

If your other intended production does not leave any space at all for the Ferro department, then you should be able to find such space outside of your present plant.

[fol. 575] We daresay that the maintenance (and the ultimate growth of your Ferro department) will be a substantial contribution to your standing in Washington, particularly as you are the only aluminum remelter among so many others who had sufficient vision to go into the production of Ferro Alloys by the alumino-thermic process, thereby adding to the production of most essential war products.

The Thermit department in the Apex Smelting Company, if properly conducted, will help you come to good terms with firms like:

Electromet
Vanadium Corporation
Climax Molybdenum
Molybdenum Corporation

all consumers of granulated aluminum. You know that we do not exaggerate. We are convinced that you can get all their orders for aluminum powder one day, when you are again interested in it, over competition from the National Smelting Company, which today has practically a monopoly in this grade.

You mentioned to Mr. Wolf that a new properly equipped Ferro department would mean an expenditure of about $60,000.

In order to show you our spirit of cooperation, we should like to suggest that the present arrangements be changed to the effect that you retain 75% of the profit, therefore assigning only 25% to the French partner and ourselves. (The exclusive sales rights on the basis of a commission of 2½% would be reserved to us as heretofore).

However, if you don't accept even this gesture, and you think you must separate yourself from us just at this moment, thus wasting all the work we have done for years, we are ready to discuss this with you. In other words, we are ready to discuss the terms and conditions under which the present arrangements may be cancelled, but we can do so only if the conditions are reasonable enough to be ac-

cepted by our French partner also, which means first of all that no sudden shut-down can be allowed, and that you must promise us to continue the department in good faith for at least another six months, and abstain from any steps which would be detrimental to our French partner and ourselves.

Very truly yours,

CONTINENTAL ORE CORPORATION

April 8, 1942

Continental Ore Corporation
500 Fifth Avenue
New York City, N. Y.

Att: Mr. Henry J. Leir

Gentlemen:

We have your letter of April 7th and we would like to hold this equipment to one side for you; but unfortunately, space is what we really need at the moment. And in addition to this the present market is a very attractive market to dispose of the equipment.

Jaw Crushers and flat cars particularly take up a lot of room, and you can understand that it would be best to dispose of this material rather than putting it somewhere where it would rust away; and therefore, unless you can see the possibilities of using this, we will make attempts to dispose of it.

Very truly yours,

APEX SMELTING CO.

Re: Jaw Crusher

Gentlemen:

We thank you very much for your wire regarding the jaw crusher and have offered it by airmail to our friends in New Mexico.

We urged them to let us have their decision by Friday but there might be a delay until Saturday if the men are away at the mine.

In any case, we will endeavor to give you a reply by Saturday noon and hope you can keep this matter open for us until then.

Thanking you again, we are

Very truly yours,

CONTINENTAL ORE CORPORATION

[Stamp—Received—Apex Smelting Co.—Apr. 8, 1942—8:30 A.M.]

DATE 4/7/42

TO: Apex Smelting Company

SUBJECT Ferro Department

Attention: Mr. L. Lippa

We thank you for your letter of April 6th.

Right at the moment, we are unable to tell you whether we will have use for this equipment. We are negotiating with a party that may be interested in going into this business, but our talks are progressing rather slowly.

We think that for the time being, the best thing would be for you to keep this property in storage in a corner of your plant.

The moment Ferro Vanadium can be exported again, the equipment will become more valuable, because it will be very interesting to produce Ferro Vanadium even on a smaller scale, because of the margin of $1.00 between the domestic and export price, which margin is in favor of the producer.

Please let us know what you are going to do with this equipment.

1. Direct evidence was introduced at the trial that respondents had as their purpose and intent the exclusion of all independent and potential sources of supply for petitioners	18
2. There was direct evidence introduced at the trial that respondents intended to exclude respondents' only competitor in ferrovanadium, petitioners, and their manufacturing associates, from the vanadium industry	23
3. There was direct evidence introduced at the trial or offers of proof which were erroneously excluded by the trial Court that respondents directly interfered with petitioners' manufacturing associates	24
(a) Petitioners proved that VCA interfered with petitioners' relationship with Apex Smelting Co. in order to keep petitioner out of the vanadium business	24

Page

(b) Evidence that Union Carbide threatened reprisals against Climax Molybdenum Co. if Climax maintained its association with petitioners was erroneously excluded 25

(c) Respondents uniformly and jointly refused to supply petitioners with vanadium oxide in November, 1943, so as to interfere with petitioners' manufacturing association with Imperial 26

(d) Respondents acquired government mills not needed by them to prevent independent operators from acquiring them 28

4. During the period 1938 to 1946, respondents refused to deal with the petitioners, and thereby deprived petitioners access to over 90% of the industry's supply of vanadium oxide 29

5. There was direct and circumstantial evidence introduced at the trial that respondents directly thwarted petitioners' independent supplies of vanadium oxide 30

(a) The Nisley & Wilson Mill 30

(b) The Blanding mines production 31

(c) Shattuck or North Continent Mill 31

6. Respondents prevented petitioners from shipping vanadium products into Canada by utilizing the power granted by the Canadian Government to Electromet of Canada, a wholly owned Carbide subsidiary, to allocate vanadium supplies during the war period 32

7. Petitioners proved loss of profits and elimination from the vanadium industry from their books and records 33

Reasons for granting the writ 36

I

Page

The decision of the Court below is in conflict with the decisions of this Court which have held: (1) that violators of the antitrust laws are liable for injuries to competitors they intentionally pursue; (2) that violators of the antitrust laws must assume the burden of proof when the effect of an intended or foreseeable act occurs 36

A. The decision of the Court below is in direct conflict with Story Parchment Co. v. Paterson Parchment Paper Co., 282 U.S. 555 (1931); Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946); Eastman Kodak Co. v. Southern Photo Materials Co., 273 U.S. 359 (1927), all landmark decisions of this court 36

B. The decision of the Court below is in direct conflict with decisions of this Court and decisions of other Circuit Courts 43

1. In a monopolized market a party asserting a bona fide right to compete need not necessarily show a refusal to deal and certainly is not required to show both refusals to deal and obstruction of his other sources of supply 43

2. Even assuming the correctness of the legal conclusions of the Court below, the opinion conflicts with a just and reasonable interpretation of the record as required by this Court in Story Parchment Co. v. Paterson Parchment Paper Co., supra 49

(a) Contrary to the statements in the lower Court's opinion, during the year prior to the Apex cancellation, petitioners requested supplies from the respondents 49

(b) Contrary to the statements in the lower Court's opinion, the record does contain evidence of the pending negotiations between petitioners and the Climax Molybdenum Co. 52

(c) Petitioners specifically attempted to obtain vanadium supplies from respondents for the Imperial Paper & Color Co. relationship 55

Page

(d) The Nisley and Wilson Mill was out of production from October, 1942, to April, 1943, as a result of the acts of the respondents .. 55

(e) Petitioners' failure to acquire 300,000 pounds of oxide in January, 1944, related not to "oxide", as the Court below concluded, but to raw ore in stockpile owned by MRC and concerned a time period after Nisley & Wilson had already closed their mill as a result of respondents' activities 56

(f) Petitioners' failure to buy flakes from Nisley and Wilson in October, 1943, related to a plan in the future since Nisley and Wilson were under the control of USV, agent for MRC from April, 1943, to January 1, 1944 57

II

The decision of the Court below is in direct conflict with the decisions of the First, Fourth and Seventh Circuits on the reasonableness of petitioners' efforts to seek entry into the market place and the necessity of demands of oxide from respondents 59

A. The reasonableness of petitioners' conduct in seeking entry into the market place 59

B. In holding that a demand for oxide from respondents was indispensable in a case which showed a conspiracy to monopolize an industry resulting in 100% control and a purpose and intention to eliminate independent competitors the Court below is in conflict with the Seventh Circuit 60

III

The Court below erroneously applied this Court's decision in Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc. (1961), 365 U.S. 127, 81 S.Ct. 523, which only held that the Sherman Act does not apply to joint action to lobby or to influence the passage of legislation 61

A. Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc., supra, does not apply to the exclusion of com-

Page

petition accomplished under and pursuant to the terms of a conspiracy to monopolize an industry by predatory business tactics, part of which conspiracy included the use of one of the co-conspirator's subsidiaries which had been given the power to allocate vanadium by the Canadian Government to exclude petitioners as competitors and arrange market division 61

B. Respondents' unlawful use of the subsidiary's Canadian agency agreement for the purpose of violating the anti-trust laws did not immunize respondents from liability 63

V

The decision below is in conflict with the Seventh Amendment of the Constitution and the decisions of this Court which prevent the reexamination of facts tried by a jury 67

A. An Appellate Court does not have the inherent power to review judgments based on facts submitted to a jury without having the issue of sufficiency of the evidence properly raised by appeal from a prior determination by the trial Court 67

B. The opinion of the Court below conflicts with established standards imposed by this Court on appellate and trial Courts in determining motions to dismiss and for directed verdict in order to insure the right to trial by jury 70

peals for the Ninth Circuit entered in the above-entitled case on March 22, 1961.

CITATIONS TO OPINIONS BELOW

The opinion of the United States Court of Appeals for the Ninth Circuit is reported in 289 F.2d 86 (1961). A copy of the opinion is attached hereto as Appendix A. No opinions were issued by the District Court.

JURISDICTION

The judgment of the United States Court of Appeals for the Ninth Circuit was entered on March 22, 1961. (Tr. 2583, Appendix B.) Petitioners filed a Petition for Rehearing on April 21, 1961, which was denied on May 15, 1961. (Tr. 2584, Appendix C.) The jurisdiction of this Court is invoked under 28 U.S.C., Section 1254(1).

QUESTIONS PRESENTED

1. Whether the Court of Appeals for the Ninth Circuit, having been reversed successively on *Radovich v. National Football League*, 352 U.S. 445 (1957); *Klor's, Inc. v. Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1959); and *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959), can nullify those decisions of this Court in as obvious a manner as has been done here?

2. Whether an Appellate Court can take away from a jury the question of causal effect concerning an injury by

a 100% two-company monopoly (admittedly achieved pursuant to an intent to monopolize) when the question of violation is confessed and the issue of measurement of damages is more than sufficiently supported by relevant economic data and where the destruction of the plaintiff company (petitioners herein) was admitted to be, by a chief executive officer of a defendant, an important goal of the monopolists?

3. Whether this Court can tolerate a decision to stand involving an admitted refusal of the trial Court to follow this Court's opinion in *Bigelow v. RKO Radio Pictures*, 327 U.S. 251 (1946) on the ground that "somebody has to start reversing the Supreme Court." (This statement was actually and seriously made by the trial Court.) The Court of Appeals side-stepped this issue, but went on to give an interpretation of the *Bigelow* case about which it acknowledged it was "not sure", thus compounding the trial Court's admitted refusal to apply *Bigelow* with its own misconstruction.

4. Whether this Court's decision in *Bigelow v. RKO Radio Pictures*, 327 U.S. 251 (1946) is applicable only to cases wherein the complaint is of a "general loss inflicted by the defection of countless, individual customers" or whether it is also applicable to a case, such as the instant case, wherein plaintiffs proved an inability to succeed in a monopoly market and a resultant loss of specific business arrangements and all necessary sources of supply and customers? The Ninth Circuit stated it was "not sure". (Opinion, Appendix A, page 11.)

5. Whether petitioners, an American company, can claim damages under the anti-trust laws for injury caused

by their elimination from the Canadian market when it is shown that two other American companies had entered into a conspiracy to eliminate all competition and to monopolize the industry and when it is shown that as part of this conspiracy one of the American companies utilized its domination and control over a wholly owned Canadian subsidiary, which had been given a discretionary power by the Canadian government to allocate the importation of vanadium into Canada during the war, to exclude the exports of petitioners (competitors) from entering Canada for sale to petitioners' Canadian customers and when it is shown that the refusal of the Canadian subsidiary to allocate vanadium to petitioners' Canadian customers was directed by its American parent company pursuant to the overall conspiracy to eliminate all competition and specifically to eliminate petitioners. This issue was erroneously decided against petitioners on the Court of Appeals' manifest misapplication of this Court's recent opinion in *Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc.* (1961) 365 U.S. 127, 81 S.Ct. 523.

6. Whether petitioners, against whom a directed verdict was ordered by the Appellate Court, were deprived of a trial by jury by the Appellate Court below which weighed the evidence, made factual rulings on the sufficiency of evidence of causation, did not view the evidence as a whole, did not allow petitioners the benefit of all their evidence, did not allow petitioners the benefit of all inferences and presumptions to be drawn from the evidence and did not resolve all conflicts in the evidence in favor of petitioners in direct conflict with this Court's opinion in *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959).

7. Whether the Seventh Amendment to the United States Constitution prevents a Federal Appellate Court from reviewing the facts determinable by a jury when the trial Court permitted the case to be submitted to the jury and the factual question of the sufficiency of the evidence on the question of causation was not raised by appeal or by a cross-appeal and when there has been no compliance with Rule 50(b) of the Federal Rules of Civil Procedure by the party seeking to have the Appellate Court review the sufficiency of the evidence to support a finding?

STATUTES INVOLVED

The statutes involved are Sections 1 and 2 of the Sherman Act, 15 U.S.C. 1, 2; Section 4 of the Clayton Act, 15 U.S.C. 15, and 28 U.S.C., section 2072, Fed. Rules of Civ. Proc. 50(b). The constitutional provision involved is the Seventh Amendment of the Constitution of the United States. These are printed and attached to this Petition as Appendix D.

STATEMENT OF THE CASE

A. Summary Statement

This was an action filed by petitioners to recover treble damages under the Sherman Act. Petitioners were distributors and agents in the alloy metals business. The complaint alleges that respondents conspired to monopolize and did monopolize the vanadium industry and that, as a result of these violations of the anti-trust laws, petitioners were eliminated from the vanadium industry. Peti-

tioners claimed they could not continue to operate profitably because of the dominant position respondents had acquired in the industry as a result of their monopolization of raw materials, their joint refusal to sell supplies to petitioners for processing in their own plants or to manufacturing associates with whom petitioners had made manufacturing arrangements, their intentional elimination of petitioners from the Canadian market pursuant to the conspiracy between respondents, and their threats of commercial reprisals to manufacturing associates of petitioners for persisting in the industry. (Complaint, Par. 39, Tr. 21.)

The complaint was filed on July 15, 1949. (Tr. 3-25.) The trial by jury commenced on June 2, 1958. On June 24, 1958 the jury returned a verdict in favor of respondents. (Tr. 104.) Judgment was entered on the verdict. (Tr. 104-105.)

After entry of judgment, neither of the parties moved for any type of ruling under the provisions of Rule 50(b) of the Federal Rules of Civil Procedure.

Petitioners duly appealed to the United States Court of Appeals for the Ninth Circuit. Petitioners' Statement of Points on Appeal appears at page 2058 of the transcript. Neither party designated the complete record. (Tr. 2064-2068.) For example, respondents' motions for dismissal at the close of petitioners' case are not printed (Tr. 1271, 1989) but the motions for a directed verdict are reported (Tr. 1989).

In their specifications of error, petitioners complained to the Court of Appeals that, during the trial, petitioners sustained prejudicial hostility to their lawsuit and to the

Sherman Act in general and that the trial Court made repeated rulings on the law and the evidence manifestly erroneous and prejudicial to them.[1]

Respondents did not cross-appeal.

In its opinion, the Court of Appeals for the Ninth Circuit held as a *matter of law* that even assuming that petitioners had proved a conspiracy to monopolize the vanadium industry resulting in a 100% control of the manufacture of ferrovanadium and a 90% to 95% control of the manufacture of vanadium oxide by respondents, and had proved their [petitioners'] inability to successfully maintain themselves in the vanadium industry, the trial Court erred in submitting the case to the jury because petitioners had not proved causation. The Court below based this holding on its conclusion that petitioners had not proved that respondents eliminated all petitioners' sources of supply and had not proved an absolute and unqualified inability to obtain vanadium oxide from respondents. (Opinion, Appendix A.) The Court below made this ruling in the face of confessions by top executive officers of respondents that respondents had as their goal the elimination of all competition in general (Tr. 208-209), and the elimination of petitioners in particular (Tr. 546-547, 222-226, 611).[2]

---

[1]The errors raised on appeal by petitioners are set forth at Appendix F to this Petition.

[2]In this respect, it is to be noted that actions were brought by independent miners and millers in the District Court of the State of Utah, based on the same conspiracy involved herein. In those cases, a jury found against respondents and assessed damages on behalf of plaintiffs. There the trial Court admitted the evidence as to conspiracy rejected by the trial Court in the instant case. These cases are presently before the United States Court of Appeals for the Tenth Circuit.

In so ruling, we respectfully submit that the Court below deprived petitioners of their rights under Section 4 of the Clayton Act and the Seventh Amendment to the United States Constitution.

In order to state the facts necessary to show the more than abundant evidence which precluded the result reached by the Court below and the serious errors which the Court below refused to face, it will be necessary to state the facts in some detail.

B. Rulings of the Trial Court

The complaint filed herein alleged a conspiracy by respondents to monopolize the vanadium industry, monopolization of the vanadium industry and the elimination of petitioners from the vanadium industry. (Tr. 16.) The complaint alleged that this conspiracy was formed in 1933, continued up to the date of the filing of the complaint and was the cause of the petitioners' elimination from the vanadium industry. (Tr. 13, 16-24.) The complaint specifically alleged that respondents intended to eliminate all independent producers and distributors of ferrovanadium and vanadium oxide from the vanadium industry and that petitioners were one of the companies eliminated as a result of this conspiracy and monopolization. (Par. 30, Tr. 16; Par. 45, Tr. 23-24.)

During the trial, the trial Court did the following:

(a) Rejected as inadmissible all evidence and testimony offered by the petitioners to show the terms, origin, nature, purpose and scope of the conspiracy and combination of the respondents from 1933, the year in which petitioners alleged the conspiracy was formed, to 1938

on the grounds that petitioners entered this country in 1938. (Tr. 112-113, 118-119; Offer of Proof, Tr. 308-327; 422-434; 151-152, 194; 256-268; 601-603; 1985-1986.)

(b) Rejected all evidence pertaining to the suppression of petitioners' Canadian business by respondents as part of the conspiracy and the exclusion of petitioners from Canadian Markets (Tr. 801-808; 831-838; Offer of Proof, Tr. 801-840);

(c) Rejected as inadmissible evidence that respondent Union Carbide informed petitioners that they had no business in the vanadium industry, threatened petitioners to stay away from Climax Molybdenum Co., a manufacturing associate of petitioner which produced petitioners' product, or reprisals would be taken against Climax (Tr. 813-818; 826-834; 845-851; 1008-1012);

(d) Excluded evidence offered by petitioners as to their overall business success and their ability to succeed in other allied fields of ores, minerals and alloys (Pls.' Ex. 121 for Id., Tr. 1083-1088; Pls.' Ex. 123 for Id., Tr. 1096-1097; Pls.' Ex. 124 for Id., Tr. 1097-1103; Pls.' Ex. 125 for Id., Tr. 1103-1106; Pls. 126 for Id., Tr. 1106-1107; Pls.' Exs. 139-141 for Id., Tr. 1261-1266);

(e) Persistently told the jury that activities in prima facie violation of the antitrust laws were "good business judgment", a "good proposition", and not "improper". (Tr. 209, 245, 246, 558, 561, 586.) In effect, these statements amounted to an instruction to the jury that good business judgment was an absolute defense to Sherman Act violations. (Tr. 1909-1910; 245, 246, 255, 256, 561, 563, 586, 611, 869, 1647, 1709, 1833.) This error was magnified in the instructions when the Court instructed the jury that

". . . You cannot find that the defendants entered into an unlawful agreement or conspiracy because you disagree with their business judgment." (Tr. 2029.) The trial Court failed to qualify its instructions on individual business judgment (Tr. 2028-2029);

(f) Instructed the jury on the public injury doctrine specifically rejected by this Court in *Klor's Inc. v. Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1959); *Radiant Burners, Inc. v. Peoples Gas Light and Coke Co.*, 364 U.S. 656, 81 S. Ct. 365 (1961). (Tr. 2035-2036.) In fact, the "public injury" instruction offered by respondents and given by the trial court specifically cited the Ninth Circuit *Klor's* decision which this Court unanimously overruled;

(g) Erroneously instructed the jury that any acts of the respondents as agents of the Government, American or Canadian, could not be considered by the jury as part of the illegal agreement, plan or monopolization herein involved (Tr. 2033);

(h) Required petitioners to prove damages to a reasonable certainty and to prove that, but for the conspiracy, petitioners would have had vanadium products to sell and would have sold them at a profit. (Tr. 2032.) In so doing the trial Court in complete seriousness stated "But somebody has to start reversing the Supreme Court." (Tr. 2011.)[3]

[3]Mr. Alioto. I would suggest this, if your Honor please; it has been done in other cases, and we have done it pretty usually in our proposed instructions: Just take that instruction from the *Bigelow* case and give it directly and verbatim. No one can object to the language of Justice Stone . . . . The Court: Yes. But somebody has to start reversing the Supreme Court. (Tr. 2011.)

(i) Refused to instruct the jury that a conspiracy to refuse to deal was per se illegal (Tr. 2031);

(j) Repeatedly questioned the materiality and import of petitioners' evidence (Tr. 221, 249, 325, 599, 751, 753, 1323, 1324, 1581, 1603, 1621, 1644, 1646, 1656, 1801, 1909-1911, 1924, 1979, 1984), and, to petitioners' prejudice, continuously minimized and questioned the weight and credibility of petitioners' evidence and witnesses. (Tr. 560, 561, 1413-1414, 1422, 1581, 1804, 1904, 1910, 1962-1963.) By its unwarranted interference in these respects, the trial Court prevented petitioners from making a full, orderly and fair presentation of their case, and gave the jury an impression that their decision should be for respondents.

(k) Permitted counsel for respondent VCA to inform the jury in his opening statement that these same respondents had been acquitted in a prior government suit based on these same facts. (Tr. 111.)

On two separate occasions during the trial, respondents moved for a dismissal and a directed verdict on the grounds of insufficiency of the evidence. (Tr. 1989.) The first of these motions was made after petitioners had presented their case. The motions were renewed after respondents rested. The motions for dismissal and directed verdict were not printed in the record; however, reference is made to them at page 1989 of the Transcript. The trial Court reserved its rulings on these motions on both occasions and, without ruling on them at any time, submitted the case to the jury, which returned a verdict in favor of respondents.

C. Evidence on the Issue of Causation

1. Monopoly Control of the Vanadium Industry

The business of milling, manufacturing and selling vanadium products[4] was completely controlled and dominated by respondents, the Union Carbide and Carbon Corporation, (herein called Union Carbide), its divisions or subsidiaries, and the Vanadium Corporation of America (herein called VCA). The Union Carbide divisions or subsidiaries involved in this case were the United States Vanadium Corporation, (herein called USV); Electro Metallurgical Company, (herein called Electromet); Electro Metallurgical Sales Corporation, (herein called Electromet Sales); Electro Metallurgical Company of Canada, Ltd., (herein called Electromet of Canada). All

---

[4]Vanadium is a rare metallic element found in the United States on the Colorado Plateau, a geographical unit formed by the western part of Colorado, the eastern part of Utah and the northern parts of New Mexico and Arizona. The vanadium-bearing ore is first mined, then converted into vanadium oxide at mill sites located near the ore deposits. These mills crush, roast and leach the ore to produce a substance known as "red cake". This red cake is then fused into a black oxide, which is interchangeably called vanadium oxide, vanadic acid, vanadium pentoxide or V_2O_5. (Tr. 166-169.) This oxide is then converted into ferrovanadium, a ferro-alloy, through the application of great heat either by means of an electric furnace or by an alumino-thermic process. Respondents utilized the electric furnace process of conversion. (Tr. 170-171, 1827-1828.) Petitioners utilized the alumino-thermic process, a process which is much cheaper and does not require large and expensive investments in electric furnaces. (Id., Tr. 841-842.)

The vanadium oxide produced at the mill sites on the Colorado Plateau is shipped to electric furnace plants, located in the East, for conversion to ferrovanadium. (Pls.' Ex. 6, Tr. 2069-2072.)

The major customers for vanadium products are the steel companies, which use the ferrovanadium in the steel bath to add toughness and tensile and torsional strength to the steel. (Tr. 1523-1529.) Vanadium steels are used in the manufacture of high speed tools, machine and automobile parts, and in armor plate. (Id.)

the above mentioned companies except VCA are either divisions or wholly owned subsidiaries of Union Carbide. VCA is an independent corporation.

Except for the competition offered by petitioners during their existence, at all times mentioned herein, VCA and Union Carbide maintained a 100% control of the manufacture and sale of ferrovanadium (Pls.' Ex. 138, Tr. 1938-1947; 1402-1403; 1843-1844), and more than a 90% control of the manufacture and sale of vanadium oxide (Pls.' Exs. 136-137, Tr. 1938-1945; 1844-1845). USV alone produced and sold more than 77.2% of the vanadium oxide manufactured and sold in the United States. (Id.) VCA produced 64.7% of the total production of ferrovanadium. (Pls.' Ex. 138, Tr. 1938-1947.)

By 1940, USV alone held more than a 90% control of all easily accessible ore bodies on the Colorado Plateau. (Tr. 506.)

2. The Parties

(a) Union Carbide

Union Carbide is a New York corporation which holds ownership of corporations engaged in the manufacture, distribution and sale of ferro-alloys. (Tr. 153, 164-166.)[5] USV is the wholly owned Union Carbide subsidiary which was engaged in the business of mining and milling vanadium ores on the Colorado Plateau. (Tr. 27, Pls.' Ex. 6, Tr. 2071.)

In Canada, Union Carbide wholly owned the Electro Metallurgical Company of Canada, Ltd., a corporation

[5]The Union Carbide divisions or subsidiaries involved herein are set forth in Section C1 of this Petition at pages 12 and 13.

organized and existing under the laws of Canada. (Tr. 27-28, 819-820.) Union Carbide sold vanadium products in Canada through this Canadian subsidiary.

Union Carbide or its subsidiaries were the only major domestic producers of vanadium oxide on the Colorado Plateau until about 1940. (Pls.' Ex. 18, Tr. 124-127.) In 1927, Union Carbide had acquired the properties of the United States Vanadium Corporation, located at Rifle Colorado and entered the vanadium business. (Pls.' Ex. 6, Tr. 2070.) In 1936, it erected a mill at Uravan, Colorado. (Id.) From 1942 to January, 1944, it operated the vanadium mill at Durango, Colorado, as agent for the Metals Reserve Company, a governmental agency which appointed USV its agent for the war time procurement of vanadium. (Df. U's Ex. B, Tr. 2358; Tr. 368-381.) USV acquired the Durango mill from the United States Government in July 31, 1944, and operated it until June 2, 1948. (Pls.' Ex. 6, Tr. 2071.) In 1942, USV also erected another mill at Rifle, Colorado. (Tr. 2070.)

(b) Vanadium Corporation of America

From 1927 to 1940, VCA's principal source of vanadium bearing ores was a Peruvian mine where it also operated a mill. (Tr. 2072.) In 1932, VCA acquired the assets of the Rare Metals Corporation for $428,000. (Tr. 2069-2070.) These assets included a vanadium mill located at Naturita, Colorado. (Tr. 2069-2070.) Although it acquired the Naturita mill in 1932, the mill was not rehabilitated until 1939 and was not put into active operation until the middle of 1940. (Tr. 1827, 2070.) From 1932 to 1940 VCA relied on USV for its domestic source of vana-

dium oxide. (Pls.' Ex. 8, Tr. 2074, Pls.' Exs. 43, 44, 45, Tr. 2122-2126.)

From September, 1942, until February 29, 1944, VCA operated a mill located at Monticello, Utah, for the Defense Plant Corporation. This Monticello plant was erected and planned by VCA officials at government expense. (Tr. 1836.) VCA leased the plant during 1945 and the spring of 1946. (Tr. 2072.) In 1948, VCA acquired the Durango Mill. (Tr. 1827, 2072.)

During the periods in question, respondents milled millions of pounds of vanadium oxide, which constituted more than 90% of the total domestic production. From this oxide respondents produced millions of pounds of ferrovanadium per year. Except for petitioners' challenge to this monopoly, this production constituted 100% of the total domestic production of ferrovanadium. (Pls.' Exs. 1, 2, 3, 18, Tr. 113, 114, 127.)

(c) Petitioners

Petitioners were a family partnership and successors to the Continental Ore Corporation, hereinafter called Continental. Mr. Henry J. Leir was "the guiding light" in Continental in 1938. He came to this country from Europe in 1938 and brought with him an extensive and practical knowledge, background and experience in ores, metals, and alloys. (Tr. 1034-1047.) Mr. Leir had an extensive background in Europe in the vanadium industry, having successfully developed the inexpensive alumino-thermic process of converting oxide to ferrovanadium. (Tr. 1043, 1063.)

After his arrival in this country, Mr. Leir challenged respondents' monopoly position by attempting to enter the vanadium industry. He contacted the Apex Smelting Company of Chicago, Illinois, a maker of aluminum, hereinafter referred to as "Apex" and entered into an agreement with Apex whereby Apex would produce ferrovanadium for petitioners and petitioners would be the agents for Apex, procure the supplies of vanadium oxide necessary to permit Apex to manufacture ferrovanadium and then sell the finished Apex ferrovanadium production. (Tr. 1059; Pls.' Ex. 117, Tr. 2187-2189.)

Apex commenced producing ferrovanadium in August or September, 1940, and continued to produce ferrovanadium until October, 1941. (Tr. 1062.) A fire suspended operations for a time (Tr. 1154), but in January 27, 1942, Apex notified Mr. Leir that Apex was terminating its contract with petitioners (Df. V's Exs. I-Y, Tr. 1173-1175). Apex terminated production in July, 1942. (Pls.' Ex. 122, Tr. 2218-2220.)

Thereafter, petitioners installed a grinder and mixer in a warehouse located on Long Island, New York, and from 1942 to 1944 they attempted to distribute their product Van-Ex, a product which they had developed at lower cost and which could be used in place of ferrovanadium. (Tr. 840-845, 860; see Pls.' Ex. 119, Tr. 2212; Tr. 989.)

On February 10, 1943, petitioners and the Climax Molybdenum Corporation of Langeloth, Pennsylvania, hereinafter referred to as "Climax", entered into a contract for the conversion of 20,000 pounds of vanadium oxide into ferrovanadium. (Pls.' Ex. 111, Tr. 1016-1018;

and see Tr. 942-961.) Climax terminated the arrangement when it was threatened with commercial reprisals if it persisted in the industry by respondent Union Carbide. (Tr. 829.)

In the Spring of 1944, petitioners and the Imperial Paper and Color Corporation, hereinafter referred to as "Imperial", entered into a contract whereby Imperial agreed to process ferrovanadium and vanadium oxide for petitioners and petitioners undertook to secure the necessary raw materials for Imperial and to act as its sales agent for Imperial's entire output. (Pls.' Ex. 110, Tr. 2175-2178.) Imperial was compelled to abandon this arrangement because of its inability to secure adequate vanadium supplies. (Pls.' Exs. 114, 115, Tr. 1022-1024, 2179-2182.)

As part of their vanadium business, petitioners had developed an extensive foreign business with a large Canadian steel mill, the Atlas Steels Limited. In 1942, petitioners shipped Van-Ex to them from their Long Island plant. (Tr. 802.) At the trial petitioners offered to prove that in 1943 they were prevented from shipping to their Canadian customers and the Canadian market by Electromet of Canada, Union Carbide's wholly owned Canadian subsidiary, pursuant to the basic conspiracy to eliminate petitioners and all other competitors but VCA from the vanadium industry. (Pls.' Exs. for Id. 80-108, Tr. 801-840; Testimony of Mr. Wolf, Tr. 813-817; 832-834; 845-851; 1008-1012.) This evidence was excluded by the trial Court. (Tr. 801-851.)

By the end of 1945, petitioners were no longer in the vanadium industry. Petitioners' billings and sales are

shown in Pls.' Exs. 119, 120. (Tr. 2212-2213.) In 1941 and 1942 alone, petitioners sold over $200,000 in vanadium products. (Tr. 2212.)

Mr. Leir was exceptionally successful in all the other fields of ores, alloys and minerals. (Pls.' Exs. 123-126 for Id., Tr. 1097-1114.) The only field of endeavor in which he was not able to become established and to succeed was the vanadium business. (Tr. 971-980, 1097-1114, 2212.) From this business he was totally excluded. Only extensive and exhaustive efforts on the part of petitioners allowed them to remain in the vanadium industry from 1938 to 1945. (Id.) However, by 1945, respondents' conspiracy to monopolize the vanadium industry and eliminate all competition had succeeded in eliminating petitioners from the market place.

D. Proved Violations of the Sherman Act

1. Direct Evidence Was Introduced at the Trial That Respondents Had as Their Purpose and Intent the Exclusion of All Independent and Potential Sources of Supply for Petitioners

There was uncontradicted direct evidence introduced at the trial that respondents conspired to monopolize the production of vanadium products and specifically intended to eliminate petitioners from the vanadium industry. Mr. Blair Burwell, a Vice President of USV and a member of its Board of Directors (Tr. 135-138) gave direct testimony that he was specifically instructed by his superiors to acquire all properties on the Colorado Plateau that could possibly produce vanadium in competition with USV in order to keep them off the American market. (Tr. 209.) Seldom, if ever, has there been a confession of such

flagrant antitrust violations by an executive of an offending company. Mr. Burwell gave the following testimony:

"Q. State whether or not there was, in September of 1938, a communication from any superior of yours in the United States Vanadium Corporation or Union Carbide with respect to a policy on competitive activities on the Colorado Plateau.

A. Yes, there was.

Q. Was this an oral or a written communication to you?

A. Oral.

Q. And who gave you that oral communication?

A. Mr. Van Fleet.

Q. What was the policy as communicated to you?

A. Well, I was—my instructions were to acquire all the properties on the Colorado Plateau that would possibly produce vanadium in competition with the United States Vanadium Corporation.

Q. To acquire them for what reason?

A. To keep them off the market as producers of vanadium.

Q. What market?

A. The American market."

(Burwell, Tr. 208-209.)

Burwell gave detailed direct testimony as to USV's acquisition or elimination of all independent sources of vanadium oxide to which petitioners could look or depend upon for their raw materials. The independent sources of supply which were specifically eliminated by respondents to keep them out of the American market were:

(a) *Anaconda Copper Company:* USV purchased its production of approximately 100,000 pounds of V_2O_5 per year. (Tr. 206-207.) Burwell testified USV did not need

this oxide at this time (September, 1938), but that USV purchased the Anaconda production only to "keep it off the market", "the American market". (Tr. 207.)

(b) *Gateway Alloys:* These mines were unnecessarily and brutally stripped of easily accessible ore by USV because "we wanted to keep another vanadium operation from getting started". (Tr. 292-293.)

(c) *Mesa Vanadium Mill:* The entire mill was acquired by USV "to keep it out of production". (Tr. 303.) USV did not need a mill at this time. (Tr. 303.)

(d) *Loma Mill:* Prior to the time this independent mill was opened, USV was not purchasing ore in the area of the Loma Mill. After the mill was opened as an independent mill, USV started an ore buying station near the mill to keep the ore "away from this mill". (Tr. 303-306.) The mill closed for lack of ore. (Tr. 306.) This ore was hauled a distance of 150 miles to keep it away from independents. (Tr. 306.)

(e) *The Durango Mill:* This mill was acquired by USV in 1944 because "we wanted to keep control of the production of vanadium" (Tr. 246-247) and because some independents were trying to buy it (Tr. 242). USV feared these independent producers would use this mill to start an independent production of oxide in competition with USV. (Pls.' Ex. 38, Tr. 244, 2119.)

(f) *Nisley & Wilson Mill:* Mr. Nisley, one of the owners of the mill, testified that Burwell actually took miners off his scales and offered them premium prices to haul their ore a great distance to USV's mill at Uravan. (Tr. 655-656.) The mill closed. (Tr. 658-663.) After Nisley was caused to close his mill he sought MRC aid and was

referred to Burwell, USV agent for MRC, who told him that the only condition under which Nisley would be supplied ore purchased by MRC for the government account was that the oxide produced from the ore be returned to USV. (Tr. 660-663.) USV, as agent for MRC, subsequently terminated its contract with Nisley sooner than it terminated its contract with VCA. (Tr. 666.)

Mr. Burwell also testified that there was an agreement between Union Carbide and VCA which required Electromet to follow VCA prices against the business judgment of officers of USV. (Tr. 145-157, 193-194, 229-241.)

Respondents' letters and correspondence showed the most intimate collaboration between respondents. For example in November, 1938, Electromet Sales sold VCA 130,000 pounds of vanadium oxide at 80¢ a pound, which was 30¢ below respondents' identical contract prices of $1.10. (Pls. Exs. 4, 10, Tr. 114, 119-120.) And as a result of the so-called "Maggie C." Agreement entered into between Union Carbide and VCA, USV mined ore from claims owned by VCA, milled these ores into vanadium oxide at its own mills at the price of 65¢ per pound in 1939 and 75¢ per pound during 1940 for delivery to VCA. (Pls.' Ex. 8, Tr. 2074; Pls.' Exs. 43, 44, 45, Tr. 279-280, 2122-2126.) Under this arrangement, during 1939 and 1940, 717,848 pounds of vanadium oxide were delivered by USV to its "competitor" VCA. (Pls.' Ex. 149, Tr. 1573, 2305.)

On September 26, 1941, respondents entered the "Dry Valley Agreement". (Pls.' Ex. 46, Tr. 2128-2133.) Under this agreement, USV deeded valuable Dry Valley claims to its "competitor" VCA. (Id.)

Burwell also testified that he and Mr. Bransome, President of VCA, fixed ore prices (Tr. 211-218, 496-500) and that Union Carbide and VCA had customer division arrangements whereby customers were allocated between USV and VCA (Tr. 248-256).

Mr. Burwell's testimony on the policy of excluding all existing and potential competition to Union Carbide and VCA was corroborated by the contemporaneous documents. (Pls.' Ex. 33, Tr. 174-177; Pls.' Ex. 34, Tr. 199-206; Pls.' Ex. 35, Tr. 219, 2114; Pls.' Ex. 36, Tr. 228; Pls.' Ex. 37, Tr. 243; Pls.' Ex. 64, Tr. 2147.)

The trial Court excluded *all* correspondence and inter-office memoranda between the respondents, dated 1933 to 1938, which would have established conclusively the terms, origin, nature and purpose of the conspiracy agreement between respondents for the joint control of the vanadium industry. (Offer of Proof, Tr. 422-433; Pls.' Ex. for Id. 25, Tr. 118-119, 134; Pls.' Ex. 47, Tr. 308-316; Pls.' Exs. 48-54,[6] Tr. 318-323; Pls.' Ex. 67 A to F, Tr. 601-603, 626-627.) Petitioners claimed that the conspiracy involved in this law suit was formed in 1933 and continued until after 1938. Thus petitioners were prevented by the Court's ruling on the so-called "pre-1938" documents from introducing any evidence which would establish the terms of the agreement between respondents and from proving the specific acts which took place under said agreement from 1933 to 1938. This evidence certainly was probative on the issue of causation, i.e. whether petitioners were injured by respondents' conspiracy and violations of the anti-

[6]As an example of the type of evidence excluded by the trial Court, a copy of Pls.' Ex. 51 for Id. is attached hereto as Appendix E.

trust laws or whether petitioners' demise was caused by acts having no relation to the conspiracy.

2. There Was Direct Evidence Introduced at the Trial That Respondents Intended to Exclude Respondents' Only Competitor in Ferrovanadium, Petitioners, and Their Manufacturing Associates, From the Vanadium Industry

Mr. Burwell, in testifying on the refusal of Union Carbide to supply petitioners with vanadium oxide in November, 1943, stated that the **ONLY** reason petitioners could not obtain vanadium oxide from Union Carbide was that Union Carbide, pursuant to its conspiracy with VCA, wanted petitioners out of the vanadium business. He testified:

> "Q. (By Mr. Alioto). Did you know at that time that Mr. Leir, or the Continental Ore Company, were trying to buy—was trying to buy vanadium oxide from your company?
>
> A. Oh, yes, I heard that at that time.
>
> Q. Do you know why they would not sell it to them?
>
> A. Well, I heard exactly that they did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business. *No other reason.*" (Tr. 547; emphasis added.)

Mr. Burwell further testified that Mr. Bransome, President of VCA, told him in 1948 that VCA did not want Leir back in the vanadium business. (Tr. 222-226.) Mr. Burwell testified that Mr. Bransome told him:

> "That would put Mr. Leir in the vanadium business and that is what we are trying to keep him out of." (Tr. 226.)

Mr. Burwell further testified that it was the corporate policy of Union Carbide to keep Leir out of the vanadium business:

"Q. Now, you testified, did you not, that you heard that Union Carbide did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business?

A. That's right.

Q. Now, who told you this, Mr. Burwell?

A. Oh, I heard that from Mr. Van Vleet, I heard that from—I heard that in a dozen conferences. I don't recall exactly which one—in the building, 30 East 42nd Street, New York City.

Q. Sort of rumor?

A. It was my business to be in those meetings. They weren't formal meetings. I heard it from Mr. Van Fleet, I heard the references to Mr. Leir—I had never met Mr. Leir—I knew nothing of his business excepting it came up second-handed—I heard from Mr. Jacobi.

Q. (By the Court.) Did any of these corporations, now, that you were connected with, make an order, a formal order on policy to that effect, that you know of?

A. No, your Honor. No smart lawyer would let a corporation make a formal order in writing of that kind of thing. One of our instructions was never to write anything down like that." (Tr. 611.)

3. There Was Direct Evidence Introduced at the Trial or Offers of Proof Which Were Erroneously Excluded by the Trial Court That Respondents Directly Interfered With Petitioners' Manufacturing Associates

(a) Petitioners Proved That VCA Interfered With Petitioners' Relationship With Apex Smelting Co. in Order to Keep Petitioner Out of the Vanadium Business

Evidence introduced by Petitioners proved or tended to prove that while Apex was still a manufacturing associate of petitioners, officials of VCA and Apex had secret

negotiations which culminated in an agreement whereby Apex was to stay out of the vanadium business, furnish VCA with Petitioners' list of suppliers and, in return, VCA would purchase 150,000 to 200,000 pounds of dioxiding aluminum ingots from Apex over a period of six or seven months for $10,250-$27,000. (Pls.' Ex. 62, Tr. 2144; Tr. 1335-1337, 1947-1949.)[7] Apex subsequently terminated its association with petitioners even though Mr. Leir requested Apex to resume production again. (Df. V.'s Ex. 2-C, Tr. 1194-1196.)

(b) Evidence That Union Carbide Threatened Reprisals Against Climax Molybdenum Co. If Climax Maintained Its Association With Petitioners Was Erroneously Excluded

Petitioners made an offer of proof to prove through Mr. Martin Wolf, petitioners' Vice-President, that Union Carbide threatened reprisals against the Climax Molybdenum Co., another manufacturing associate of petitioners, if Climax continued negotiations with petitioners and persisted in the vanadium business. This evidence was excluded by the trial Court.

The offer of proof, in part, as stated by counsel for petitioners to the trial Court, was as follows:

> "Mr. Arrouet said further that the plaintiff, the Continental Ore Company, had no business in the vanadium business. Mr. Arrouet said further to the plaintiff that they had better stay away from Climax and not try to make any arrangements with Climax, and they were then entering negotiations with them, as the offer of this evidence will tend to show.

---

[7] Pls' Ex. 62, evidence of this transaction, is attached hereto as Appendix E.

"Mr. Arrouet told them to stay away from Climax, and, if Climax got into the business, that Union Carbide would undertake a reprisal against the Climax Molybdenum Company.

"He said, in that connection, that Union Carbide had available at its plant in California, its tungsten operation in California, quantities of molybdenum that they would use against the Climax Molybdenum Company if that company entered into negotiations with the plaintiff to manufacture ferrovanadium for the account of the plaintiff or under a joint operating arrangement with the plaintiff.

"At that juncture this witness, we offer to prove, that this witness said, in substance or effect, 'Does it mean, then, Mr. Arrouet, that the picture of the world is something like this: God told Electromet to make vanadium, tungsten, ferro-manganese and God told Vanadium Corporation to make ferrovanadium and that nobody else would be allowed into these fields?' To which the employee of Electromet Company and the Union Carbide affiliate answered: 'That was just about it.' And 'That's the way it was going to be.'" (Tr. 828-829.)

(c) Respondents Uniformly and Jointly Refused to Supply Petitioners With Vanadium Oxide in November, 1943, so as to Interfere With Petitioners' Manufacturing Association With Imperial

In November, 1943, petitioners made requests to both Electromet Sales and VCA for monthly supplies of oxide. (Wolf, Tr. 1012-1013; Burwell, Tr. 546-547; Pls.' Exs. 40, 41, 42, Tr. 268-273.) These requests were jointly refused. The evidence very specifically showed that petitioners made these requests for vanadium oxide from the respondents in November, 1943, in order to supply their manu-

facturing associate, the Imperial Paper and Color Corp., with vanadium oxide. This supply of vanadium oxide would have permitted Imperial to start production of ferrovanadium under a contract which petitioners were negotiating with Imperial, which petitioners were positive they could make (Tr. 1013), and which *was* eventually made (Pls. Ex. 110, Tr. 2175). Mr. Wolf testified:

"Q. (By Mr. Alioto) Now, Mr. Wolf, you were with Continental Ore Company in November of 1943, were you not?

A. That's correct.

Q. And you were with them at the time that the request was made in November to both Electro Metallurgical Sales Corporation and Vanadium Corporation of America to supply you with regular monthly supplies of vanadium oxide?

A. That's correct.

Q. Now, what was the situation in November of 1943 with respect to contractual arrangements with any proposed manufacture of ferrovanadium? Did you have any at that time?

A. In November of '43?

Q. Yes.

A. We had a contract with Imperial Paper.

Q. Well, I think your dates may be a little awry, but to establish those definite dates on matters on which both——

Mr. Archer. That's January, 1944, whatever the date is. We can develop that.

A. We had negotiations at that time which we were sure would lead to a contract with Imperial Paper, so we were trying to,——

Q. (By Mr. Alioto) All right. The contract was actually made in January of 1944, is that correct?

A. Yes. But we were trying to get a basis of raw materials for our negotiations for the forthcoming contract." (Tr. 1012-1013.)

The specific reason for respondents' refusal to supply petitioners *at this exact time* was that Union Carbide desired to exclude them from the industry. (Burwell, Tr. 546-547.) Burwell testified that Electromet did not sell oxide to petitioners [Leir] at this very time because respondents wanted "to keep him out of the vanadium business". (Burwell, Tr. 547.)

(d) Respondents Acquired Government Mills Not Needed by Them to Prevent Independent Operators From Acquiring Them

In November, 1943, following the end of the vanadium stockpile program, respondents moved to prevent independent operators from acquiring the government subsidized mills and, thereby, gain a toehold in the vanadium business. Accordingly, VCA leased the Monticello Plant from the Defense Plant Corporation (Pls.' Ex. 6, Tr. 2070), and USV acquired the Durango Plant at a cost of approximately $75,000 (Pls.' Ex. 38, Tr. 2119). Mr. Burwell testified that USV acquired the Durango Mill because USV "wanted to keep control of the production of vanadium" (Tr. 241-247) and because some independents were trying to buy it (Tr. 242). In so doing they thwarted Mr. Leir's plans to form an independent cooperative association of miners and millers. (Df. V's Exs. 2-K-L, Tr. 2533-2554; 1774-1780.)

4. During the Period 1938 to 1946, Respondents Refused to Deal With the Petitioners, and Thereby Deprived Petitioners Access to Over 90% of the Industry's Supply of Vanadium Oxide

Petitioners or their associate Apex made the following requests for vanadium oxide from respondents:

Date	Request	Action by Respondents
July 28, 1939[1]	10,000 lbs. a year from VCA	No response
Oct. 17, 1939[2]	5,000 lbs. oxide from VCA	Refused[3]
Oct. 17, 1939[4]	4,000 lbs. ferro-vanadium from VCA	Refused[5]
March, 1940[6]	Vanadium Oxide from VCA	Refused[7]
Oct. 17, 1940[8]	Oxide from Electromet	Refused[9]
June 14, 1941[10]	Vanadic Oxide from Electromet	No response[11]
June 16, 1941[12]	That Petitioners be allowed to convert oxide for VCA	No response
June 16, 1941[13]	That Petitioners be allowed to convert oxide for Electromet	Rejected[13]
July 16, 1941[14]	Through OPM, Vanadium Section, Petitioners asked for oxide from VCA	Refused
July 16, 1941[15]	Through OPM, Vanadium Section, Petitioners asked for oxide from Electromet	Refused
May 21, 1943[16]	That Electromet fill Continental's oxide requirements for the remainder of the year	Unable to accept[16]
Nov. 16, 1943[17]	10,000 to 15,000 lbs. Vanadium oxide from VCA per month, any fixed length of time	Refused[17]
Nov. 17, 1943[18]	10,000 to 15,000 lbs. Vanadium oxide from Electromet per month, any fixed length of time	Refused[18]

---

[17]Pls.' Ex. 40, Tr. 271. Pls.' Ex. 41, Tr. 271-272.
[18]Pls.' Ex. 42, Tr. 272-273.

Since respondents controlled over 90% of the existing supplies of vanadium oxide (Tr. 1844-1845, Pls.' Exs. 136-137 (not printed), Tr. 1254-1256), these refusals constituted a withholding from petitioners by respondents of the only source of a steady, dependable and active supply of oxide necessary to support a vanadium business.

5. There Was Direct and Circumstantial Evidence Introduced at the Trial That Respondents Directly Thwarted Petitioners' Independent Supplies of Vanadium Oxide

(a) The Nisley and Wilson Mill

Mr. Nisley, owner of the Nisley & Wilson Mill, testified that respondents caused him to close his independent mill in October, 1942, and to cancel his relations with petitioners. (Tr. 654-658.) From October, 1942, to April, 1943, Nisley and Wilson were out of production as a result of USV's preemptive buying program at the doorstep of the Nisley-Wilson Mill. (Tr. 658-663.) Mr. Nisley testified Mr. Burwell took miners off the Nisley & Wilson scales and offered them premium prices to take their ore to Uravan. (Tr. 655-656.) Mr. Nisley testified that during the period January, 1943 to December, 1943, his production was under the control of USV, as agent for Metals Reserve Company, which required him to mill the ore furnished him by MRC and then turn the oxide back to USV, in spite of the fact that petitioners desired the oxide and Mr. Nisley specifically requested that his production go to petitioners. (Tr. 665.) Nisley testified that the Nisley-Wilson Mill went out of production permanently in January, 1944, for the reason that the mill could no longer fight the monopoly control and tactics of respondents. (Tr. 667-668.)

(b) The Blanding Mines Production

The Blanding Mill had been supplying Apex with vanadium oxide shipments from August, 1940, to January, 1941. (Pls.' Ex. 118, Tr. 2209; Pls.' Ex. 131, Tr. 2229-2233.) The relationship between Blanding and Apex was satisfactory. (Tr. 1746.) But then, in the fall of 1941, VCA negotiated the acquisition of the vanadium ore claims of Blanding's lessor, Garbutt. (Tr. 1950; Tr. 1750.) Soon after, on January 9, 1942, Blanding notified Apex that it would no longer sell oxide to Apex. (Pls.' Ex. 131, Tr. 2239; see Pls.' Ex. 127, Tr. 2222.) Petitioners desperately pleaded for the Blanding production. (Pls.' Ex. 131, Tr. 2239-2251.) VCA obtained Blanding's oxide production for the price of $1.10 per pound, f.o.b. mill. (Tr. 1759.) Higher prices offered by petitioners were turned down by Blanding, which was under the control of VCA. (Pls.' Ex. 157, Tr. 2341; Tr. 1738-1740, 1758-1759.) On March 28, 1942, petitioners offered Blanding $1.20 per pound. (Pls.' Ex. 131, Tr. 2246.) Mr. Leir pleaded with Blanding that "you must help us stay in business now, for your sake as well as ours". (Pls.' Ex. 136, Tr. 2244.) Nevertheless the Blanding production went to VCA. Although Blanding, as an independent mill, was exceedingly important to petitioners, it was eventually turned into an ore selling operation by USV as agent for MRC after the Defense Plan Corporation had rehabilitated the mill. (Tr. 1764-1773.)

(c) Shattuck or North Continent Mill

Another of petitioners' suppliers of vanadium oxide was the North Continent Mill. North Continent was turned into an ore selling operation in the Spring of

1943, and ceased to mill vanadium oxide. The payments for the ore came from USV, as agents for MRC. (Cf. U's Ex. 3R, Tr. 915-917.)

6. Respondents Prevented Petitioners From Shipping Vanadium Products Into Canada by Utilizing the Power Granted by the Canadian Government to Electromet of Canada, a Wholly Owned Carbide Subsidiary, to Allocate Vanadium Supplies During the War Period

The trial Court excluded documentary evidence and the testimony of Mr. Martin Wolf that, commencing in 1943, as part of the conspiracy between Union Carbide and VCA, Electromet of Canada, a wholly owned subsidiary of Union Carbide acting under direct orders from its parent company, Union Carbide, prevented the petitioners from shipping vanadium products into Canada to Canadian steel mill customers. (Tr. 801-808, 813-817.)

The offer of proof as made by petitioners' counsel, was (Tr. 826-828):

> "Now, if your Honor please, we offer through this witness to prove the following facts, that at the end of 1942 and 1943 the Electro Metallurgical Company of Canada, which had been appointed as the purchasing agent by an agency of the Canadian Government, that is, the purchasing agent for vanadium, determined that it would not permit any further shipments from the Continental Ore Company into the Canadian market. In that connection we offer to prove that he was acting under instructions from the officials of Union Carbide or its affiliate in order to eliminate the plaintiff from the Canadian market."
>
> * * * * *
>
> ". . . We tentatively offer to prove in any event that it was the Carbide officials and employees which directed their wholly-owned and controlled subsidiary

organization, the Electro Metallurgical Company of Canada, Ltd., to eliminate the plaintiff from the Canadian market, to take away his Canadian customers, and to supply those customers between the Vanadium Corporation of America and Union Carbide.

We offer to prove in this connection that it was the intent and purpose of the Carbide officials and employees to use the Canadian agency for the purpose of restraining the plaintiff's trade, and specifically for the purpose of carrying out the conspiracy to restrain and to monopolize the vanadium industry in the United States and Canada. He is one of the means in connection with that monopolization and restrain[t] to eliminate the Continental Ore Company from the business."

7. Petitioners Proved Loss of Profits and Elimination From the Vanadium Industry From Their Books and Records

From 1939 to 1942, petitioners sold an increasing amount of vanadium products. (Pls.' Ex. 119, Tr. 2212.) They sold $60,000 worth of vanadium products in 1939 and $250,000 in 1942. (Id., rounded.) Petitioners' business suffered a decline in 1943, and the results in 1944 and 1945 were token. (Id.)

The loss of Apex in January, 1942 (Df. V's Ex. 1-Y, Tr. 2519), terminating an existing 14-year contract between petitioners and Apex was the last association petitioners could make with ferrovanadium manufacturers.

Apex's production never reached its estimated capacity of between 30,000 and 40,000 pounds of ferrovanadium per month. (Tr. 856, 1113.) Instead, Apex produced less than 6,000 pounds a month (Pls.' Ex. 119, Tr. 2212 ferro-

vanadium). The shortage of vanadium oxide accounted for the lack of full production. Apex stated this in a letter dated September 17, 1941, from Apex to Mr. Leir:

> ". . . as you know, we are not getting a sufficient quantity to run our present facilities on half time." (Df. V's Ex. 1-Q, Tr. 2512-2512A.)

The loss of petitioners' Canadian business caused the sales of Petitioners' Van-Ex to drop from 71,555 pounds in 1942 to 6,480 pounds in 1943. (Pls.' Ex. 119, Tr. 2212.) The substantial business petitioners did with Atlas Steels is shown in Plaintiffs' Exhibit 79 (Tr. 2169-2174, at 2173-2174).

Such losses and exclusions were anomalous to petitioners, who reached spectacular successes in other ores and metals, fluorspar, aluminum, barytes, coal derivatives, phosphates and magnesia products. (Pls.' Exs. 124-126 for Id., Tr. 1097-1107.)

E. Errors Raised to the Court of Appeals for the Ninth Circuit

The points on appeal raised in the Court below are set forth in Appendix F to this Petition. Of course, the Court below did not consider any of these claimed errors, for it decided that the trial Court had erroneously submitted the case to the jury and should have directed a verdict in favor of respondents.

F. The Appellate Opinion

Despite the overwhelming evidence which is set forth briefly above, the Court below held *as a matter of law* that the case should not have been submitted to the jury because the evidence could not support a jury finding

that respondents' violations, which the Court below assumed to have occurred, caused petitioners' injury, which the Court below also assumed to have occurred. The Court held that it had the power to review and reweigh the evidence contrary to the only Circuit Court decision in point which held the Court did not have such power. The Court reached this conclusion even though the trial Court, which had heard all the witnesses and the evidence, felt that the evidence was sufficient to submit the case to the jury. The Court made this determination even though respondents did not obtain any pre-appellate ruling from the trial Court on the sufficiency or insufficiency of the evidence to sustain a verdict and filed no cross-appeal.

Thus, in disposing of the case in this summary manner, the Court below did not rule on any of the contentions raised by petitioners. These are set forth in Appendix F.

REASONS FOR GRANTING THE WRIT

I

THE DECISION OF THE COURT BELOW IS IN CONFLICT WITH THE DECISIONS OF THIS COURT WHICH HAVE HELD: (1) THAT VIOLATORS OF THE ANTITRUST LAWS ARE LIABLE FOR INJURIES TO COMPETITORS THEY INTENTIONALLY PURSUE; (2) THAT VIOLATORS OF THE ANTITRUST LAWS MUST ASSUME THE BURDEN OF PROOF WHEN THE EFFECT OF AN INTENDED OR FORESEEABLE ACT OCCURS

A. The Decision of the Court Below Is in Direct Conflict With Story Parchment Co. v. Paterson Parchment Paper Co., 282 U.S. 555 (1931); Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946); Eastman Kodak Co. v. Southern Photo Materials Co., 273 U.S. 359 (1927), All Landmark Decisions of This Court

Story Parchment Co. v. Paterson Parchment Paper Co., supra, held that proof of conspiracy to eliminate a competitor by three companies holding monopoly power in an effort to maintain such monopoly control, and the demise of the competitor presented sufficient evidence of causation to sustain a finding.

There can be no more certain proof of causation under Section 4 of the Clayton Act than proof of a specific purpose and intent to eliminate a competitor coupled with the actual elimination of the competitor after bona fide attempts by the competitor to remain in the industry. This is *exactly* the situation in the instant case.

We respectfully submit that the Court below, in its review of the evidence, completely lost sight of two basic and salient facts:

(1) Petitioners proved that respondents conspired to monopolize and did actually monopolize all phases of the milling and manufacture of vanadium. In fact, for the

purpose of its opinion the Court below *admitted* this to be true. Thus, the free and open market guaranteed by Congress in the anti-trust laws was destroyed during the entire period in which petitioners claimed damages. Two companies, Union Carbide and VCA, controlled the entire vanadium industry and had the power to control entry into that industry. Executive officers of both companies testified that these companies had as their purpose the exclusion of all competitors and the exclusion of these petitioners in particular.

(2) Although petitioners made bona fide attempts to remain in the vanadium industry, they were unable to do so. Petitioners' failure in the vanadium industry was in complete contrast to petitioners' fantastic and spectacular success in the other lines of ores, mineral and alloys, which offered a free market for petitioners' energies and abilities.

These two factors were not even discussed by the Court below.

Completely contrary to the opinion of the Court below, this Court has held that upon the showing of a monopoly market and the inability of a challenger to succeed in such market, a factual question is presented as to causation, the determination of which is for the trier of fact, the jury in the instant case. This is the precise holding by this Court in *Story Parchment Co. v. Paterson Parchment Paper Co.*, *supra*, reversing (1 Cir. 1930) 37 F. 2d 537.

In *Story Parchment* the majority lower Court opinion reasoned that although there was proof of conspiracy to

monopolize by fixing prices in order to eliminate a sole competitor, a fact assumed to be true in the opinion of the Court below in the instant case, that the jury verdict in the trial Court should be reversed because: (a) loss of profits would be based on surmise and conjecture; and (b) the appellant did not have sufficient capital to meet the competition of respondents anyway. Therefore, the majority opinion concluded, the plaintiff had not proved causation. The majority opinion of the lower Court in *Story Parchment* stated in summary:

> "The plaintiff has not, therefore, sustained the burden of proving that it has suffered any measurable damage from the reduced prices at which it was compelled to sell its product by reason of the alleged unlawful conspiracy of the defendants, or that the subsequent depreciation of its plant was due to any violation of Section 2 of the Sherman Anti-Trust Act (15 USCA § 2) by the defendants." (37 F. 2d 541.)

In a dissenting opinion, Judge Anderson concluded that the damages suffered by plaintiff were not speculative and that the Court had improperly invaded the province of the jury in determining that the plaintiff would have died anyway. The dissenting opinion's statements are precisely applicable here. The Court stated (p. 542):

> ". . . In a word, we have here, indisputably, a combination to kill a competitor followed by the speedy death of that competitor."

And at pages 543-544 of the dissenting opinion, Judge Anderson stated:

> "The statements in the majority opinion that the plaintiff went out of business for lack of sufficient

capital, 'and that its failure was inevitable, either from lack of capital or inefficient management or both,' amount to usurping the function of the jury. Indeed, the opinion on damages does not read at all like the opinion of an appellate court, dealing only with questions of law; it deals largely with facts solely for the jury.

"There is no discussion of the soundness of the trial court's instructions on damages. By necessary implication, they are conceded to be correct. The conclusion is (to repeat) that, without the defendants' conspiracy to put the plaintiff out of business, it would have died anyway. The logic is, in that regard, hardly distinguishable from setting up the mortality of all human beings as a defense to an indictment of manslaughter or murder. The undeniable facts are that the defendants conspired to kill the plaintiff, and the plaintiff died. The majority opinion is to the effect that the conspiracy was unnecessary; that the plaintiff would have died anyway. I do not assent to such reasoning or its results."

This Court granted certiorari and rejected the majority opinion of the lower Court and adopted Judge Anderson's dissenting opinion. This Court held "That the petitioner was injured in its business and property as a result of this unlawful combination we think also finds sufficient support in the evidence." (282 U.S. 250.)

As to the conclusion of the lower Court that plaintiff could not prove that defendants caused the depreciation of the plant since it lacked sufficient capital anyway, this Court stated:

"Disposing of the second item of damages, the court below, after referring to evidence tending to

> show that petitioner was not in a thriving financial condition, said that petitioner was without capital to meet the situation which it faced, even if there had been no conspiracy and there had been open competition; and that its failure was inevitable either from lack of capital or inefficient management or both. The court therefore concluded that petitioner had not sustained the burden of proving that the depreciation in value of its plant was due in any measurable degree to any violation of the Sherman Act by the respondents. But this conclusion rested upon inferences from facts within the exclusive province of the jury, and which could not be drawn by the court contrary to the verdict of the jury without usurping the functions of that fact finding body. Whether the unlawful acts of respondents or conditions apart from them constitute the proximate cause of the depreciation in value was a question, upon the evidence in this record, for the jury, 'to be determined as a fact, in view of the circumstances of fact attending it.' Milwaukee etc. Railway Co. v. Kellogg, 94 U.S. 469, 474, 24 L. Ed. 256. And the finding of the jury upon that question must be allowed to stand, unless all reasonable men, exercising an unprejudiced judgment, would draw an opposite conclusion from the facts." (282 U.S. 566-567.)

The *Story Parchment* factual situation is indistinguishable from the factual situation presented in the case at bar. In the *Story Parchment* case, as in the instant case, petitioner was the sole challenger to the monopolists. In the instant case, two monopolists conspired to maintain domination; in *Story Parchment* three monopolists conspired to maintain domination. In the instant case, the court below conceded, for the purpose of the opinion, that

respondents did in fact conspire to monopolize the industry. So did the Appellate Court in the *Story Parchment* case.

The *Story Parchment* decision by this Court stands for the proposition that Appellate Courts are in error when they fail to give effect to the intended effects of the conspiracy and the natural tendency which the acts committed pursuant to such illegal purpose have on competition. In the instant case we have that exact factual situation. Respondents intended to eliminate petitioners from the vanadium business. Mr. Burwell so testified. (Tr. 546-547, 222-226, 611.) We submit it is gross error under the *Story Parchment* case to refuse to allow the jury to determine whether or not the acts of respondents, who had as their intention and purpose the elimination of all competitors, caused the elimination of petitioners.

Indeed, the legal presumption is that a conspiracy to eliminate competition continues until it succeeds. As stated by this Court in *United States v. Kissel*, 218 U.S. 601 (1910), at 607-608:

> "... A conspiracy to restrain or monopolize trade by improperly excluding a competitor from business contemplates that the conspirators will remain in business, and will continue their combined efforts to drive the competitor out until they succeed."

Under the holding of the *Story Parchment* case, the question of causation is a question of fact determinable by the trier of fact when a plaintiff proves a conspiracy to monopolize, a purpose and intention to eliminate him and his actual elimination from the industry after bona fide attempts to remain in the industry. In the case at

bar, petitioners proved all these facts and more. In *Story Parchment* the defendants merely reduced prices; here there were affirmative, predatory acts of refusals to deal, of obstruction of sources of supply, of commercial interference with petitioners' manufacturing associates so as to disrupt petitioners' arrangements with these associates and thereby keep petitioners out of the industry, of a deliberate and successful elimination of petitioners from an existing and profitable export business.

The opinion of the Court below is also in direct conflict with this Court's opinion in *Bigelow v. RKO Radio Pictures, supra.* The holding of this Court in *Story Parchment* was strengthened by the *Bigelow* case. In the *Bigelow* case, this Court held that a jury could conclude as a matter of just and reasonable inference from proof of defendants' wrongful acts, their tendency to injure plaintiffs' business, and from evidence of a decline in prices, profits and values not shown to be attributable to other causes, that defendants' wrongful acts had caused damage to the plaintiffs. (327 U.S. at 264.)

The *Bigelow* case puts the burden on the wrongdoers to show that other forces led to the injury suffered by plaintiff. To the contrary, the opinion of the Court below would offer protection to violators of the anti-trust laws. Although the opinion below concedes that respondents conspired to injure petitioners, conspired to drive them out of business, conspired to achieve the end result which did in fact occur and concedes that petitioners did go out of business just as respondents intended, it concludes that a jury could not as reasonable men conclude that

respondents' conspiratorial and predatory acts were the cause of petitioners' demise and resultant injury. In effect, the opinion of the Court below asks that causation be proved by more than the mere preponderance of the evidence required in civil cases. At the very least, a factual conflict was presented by the evidence and the Court below acted in direct confiict with both the *Bigelow* and *Story Parchment* decisions of this Court in ruling that the evidence was insufficient *as a matter of law* to support a finding by a jury that petitioners' elimination from the vanadium industry and their resultant damage were caused by respondents' acts committed in violation of the anti-trust laws.

B. The Decision of the Court Below Is in Direct Conflict With Decisions of This Court and Decisions of Other Circuit Courts

1. In a Monopolized Market a Party Asserting a Bona Fide Right to Compete Need Not Necessarily Show a Refusal to Deal and Certainly Is Not Required to Show Both Refusals to Deal and Obstruction of His Other Sources of Supply

The Court below has created a great burden on those dealing in a demoralized and monopoly market. It had before it a Section 2 case. It was faced with undisputed proof of complete control over the manufacture and sale of vanadium products and a showing of numerous bona fide attempts by petitioners to enter the monopolized industry. In spite of these factors, the Court stated:

> ". . . Yet, even if the *Bigelow* decision could be enlisted to serve appellants' purposes, it was still incumbent upon them to shown on the trial that their reiterated lack of supplies was the result of defendants' refusals to deal with them and of defendants'

efforts to prevent them from obtaining raw materials elsewhere." (Opinion, Appendix A, pages 11-12.)

We respectfully submit that this holding is in direct conflict with the decisions of this Court and the decisions of other circuits for the following reasons:

(a) One dealing in a monopoly market and faced with conspiratorial and predatory tactics need not deal with the monopolists or conspirators. He may take independent avenues of competition and sue the conspirators for damages caused to him by their violation of the law. This basic rule we thought settled once and for all in 1904 by *W. M. Montague & Co. v. Lowry,* 193 U.S. 38 (1904), wherein this Court stated (p. 47):

> ". . . The plaintiffs, however could not by virtue of any agreement contained in such association, be legally put under obligation to become members in order to enable them to transact their business as they had theretofore done, and to purchase tile as they had been accustomed to do before the association was formed."

Further this Court has expressly sustained judgments or actions for damages by plaintiffs, who, after having been members of an association, disassociate themselves from the association knowing that they will be boycotted or face the loss of supplies and customers. *Eastman Kodak Co. v. Southern Photo Materials Co.,* 273 U.S. 359 (1927); *Charles A. Ramsay Co. v. Associated Bill Posters,* 260 U.S. 501 (1923); *Radovich v. National Football League,* 352 U.S. 445 (1957). It is basic that it is not incumbent on a business man, under the protection of the Sherman Act, to do business with those having the purpose and

intention of injuring him and excluding him from the market place.

(b) The unlawful acquisition and maintenance of 90% to 100% control of the sources of supply, vanadium oxide in this case, places an obligation or duty on the monopolists not to exclude, and, contrary to the opinion of the Court below, places on them a burden of equal and open dealings with those aspiring to compete.

It is respectfully submitted that the Court below has erroneously placed the burden of doing business under the Sherman Act on the wrong party. The Sherman Act created liability for injured parties because it imposed a duty and obligation on business men not to reach out and destroy the free market by preventing entry and access to the market place and by fixing prices. The Sherman Act created a duty of conduct, for the breach of which Congress sanctioned a jury trial and a judgment for damages. The duty of care, then, is on the violators of the law, and it is not within their power to foreclose a competitor's entry into the market place and then demand useless requests from him. If the law were otherwise then this Court's holding in *United States v. Griffith*, 334 U.S. 100, 107 (1948) is pure commentary:

> ". . . It follows a fortiori that the use of monopoly power, however lawfully acquired, to foreclose competition, to gain a competitive advantage or to destroy a competitor, is unlawful."

And, if this be law, petitioners herein are entitled to damages upon proof of such unlawful conduct with impact on them.

Violators of Congressional standards are liable for all consequences of the acts they intend or which are foreseeable. *Bigelow v. RKO Radio Pictures, supra; Sentilles v. Inter-Caribbean Shipping Corp.*, 361 U.S. 107 (1959); *Tennant v. Peoria & P. U. Ry. Co.*, 321 U.S. 29 (1944); *Lavender v. Kurn*, 327 U.S. 645 (1946); *Stone v. New York, C. & St. L. R. Co.*, 344 U.S. 407 (1953); *Rogers v. Missouri Pacific Railroad Co.*, 352 U.S. 500 (1957).

Upon the showing of a refusal to deal at the comparable rates or prices charged to members of the combination, there is clearly no obligation to seek discriminatory and unfavorable treatment.

In the instant case, petitioners proved that Union Carbide subsidized the domestic production of ferrovanadium of its principal competitor, VCA, by supplying it with large quantities of oxide at prices 30¢ a lb. below the standard contract price of $1.10 a lb. (Pls.' Ex. 8, Tr. 2073-2074.) Petitioners proved that Union Carbide mined and milled vanadium ore for VCA (id., Pls.' Ex. 149, Tr. 2277-2340.) Petitioners further showed that though Union Carbide supplied its co-conspirator VCA with oxide, petitioners could not obtain supplies from respondents during the period 1939 to 1946, except on government request. And even upon intervention by Metals Reserve Corporation, the evidence showed that though Union Carbide supplied petitioners, it charged them a premium price of $1.15 a lb. for oxide, 5 cents more than Union Carbide's contract price of $1.10 a pound and 35 cents more than Union Carbide's price to VCA. (Pls.' Exs. 4-5, not printed.) Under these discriminatory circumstances petitioners were not bound to remain in business and to pay

exorbitant rates which would prevent their economic success. *Story Parchment Co. v. Paterson Parchment Paper Co., supra.*

(c) This Court has never even remotely suggested that equality of opportunity is dependent upon a showing that there be requests of those who conspire to monopolize *AND* a showing that these monopolists thwarted all avenues of supply.

The Court below ruled that it was incumbent on petitioners to prove both a refusal to deal *and* that respondents prevented them from obtaining raw materials elsewhere. By the use of the word "and" the Court below would require both these conditions as necessary conditions precedent to liability. This is a clear departure from established authority and in direct conflict with the cases decided by this Court.

It has been held that the Sherman Act is an act of protection assuring equality of opportunity based on providing the public with the advantage of full and unrestrained competition. The act strikes at "every" restraint against "any person." This Court has repeatedly stated that there need not be total restraint or total control of the market. *United States v. Paramount Pictures*, 334 U.S. 131 (1948); *C. E. Stevens Co. v. Foster & Kleiser Co.*, 311 U.S. 255 (1940); *United States v. Yellow Cab Co.*, 332 U.S. 218 (1947); *Indiana Farmer's Pub. Co. v. Prairie F. Pub. Co.*, 293 U.S. 268 (1934). *Klor's, Inc. v. Broadway-Hale Stores, Inc., supra*, would seem to be a decisive holding that conspirators need not deprive a plaintiff of all supplies and thwart all avenues of supply. The boycott of competitive goods is sufficient to establish liability.

The Court below cited *no* authority from this Court which supports the novel conclusions reached in its opinion. Rather the opinion fails to apply the landmark case of *Bigelow v. RKO Radio Pictures, supra,* and actually casts great doubt on its holding. The Court admits in its opinion that *Bigelow, Eastman Kodak,* and *Story Parchment,* all landmark cases decided by this Court, hold that where a plaintiff proves a loss and a violation by defendant of the anti-trust laws of such nature as to be likely to cause the type of loss which in fact occurs, the jury, as the trier of fact, must be permitted to draw from this circumstantial evidence the inference that the necessary causal relation exists. (Opinion, Appendix A, page 11.)

However, the Court then concluded that it was "not sure" that *Bigelow* applied to this factual situation, i.e., a factual situation where the loss claimed is of specific business arrangements rather than a general loss inflicted by the defection of countless individual customers.

We know of no case in which this Court has even intimated that the holding in the *Bigelow* case is limited to any particular set of facts. The opinion of the lower Court is in direct conflict with the *Bigelow* case and creates confusion where none formerly existed. The Court's statement that it is "not sure" as to whether *Bigelow* applies now permits lower Courts to pick and choose situations wherein they can apply a holding by this Court according to their prejudices. The end result of the lower Court's uncertainty is that the private litigant is no longer certain as to what rule of causation is applicable to his particular case. The decision below embraces an interpretation of the Sherman Act which greatly narrows the meas-

ure of protection afforded the private litigant and seriously impedes the availability of the treble damage remedy to a private litigant who is the victim of a conspiracy and predatory tactics, as were the petitioners in this case.

In any case, the opinion of the Court below has created a confusion in the field of causation which can do only harm to a private litigant and which eliminates a standard which this Court has established for the guidance of both private litigants and lower Courts.

It is very respectfully submitted this Court should grant certiorari if only to resolve this confusion.

2. Even Assuming the Correctness of the Legal Conclusions of the Court Below, the Opinion Conflicts With a Just and Reasonable Interpretation of the Record as Required by This Court in Story Parchment Co. v. Paterson Parchment Paper Co., Supra

With due deference to the learned Court below, we respectfully submit that its opinion conflicts with the facts as revealed by the record. This conflict was raised and called to the Court's attention in petitioners' petition for Rehearing, which was denied. (Appendix C, page 26.)

(a) Contrary to the Statements in the Lower Court's Opinion, During the Year Prior to the Apex Cancellation, Petitioners Requested Supplies From the Respondents

In the opinion below, the Court stated that petitioners failed to make requests for supplies for a year prior to the time that lack of supplies caused Apex to end its relationship with petitioners and that this failure to make requests for supplies during the "final and most critical period of the Apex contract" made it impossible for the jury to find that respondents' refusal to deal caused Apex to terminate its business arrangement with petitioners.

But to the contrary, the record shows that Apex or petitioners did try to obtain supplies during this "critical" period.

On January 27, 1942, petitioners were notified by Apex that it was discontinuing its relationship with them. (Df. V's Ex. 1, Tr. 2519.) Production continued until June, 1942, by special agreement between Petitioners and Apex because Apex was advised that petitioners had a binding agreement with Apex and petitioners were objecting strenuously to this breach of contract by Apex. (Pls.' Ex. 62, letter dated 4-14-42, Tr. 675-676.) To stay in the vanadium business as long as they could by any means, petitioners agreed that Apex would convert all the quantities of vanadic acid petitioners could obtain for Apex from Blanding, Nisley & Wilson, and Shattuck. (Pls.' Ex. 122, Tr. 2215-2221.) Thus, the "critical year" would be from January, 1941 to January 22, 1942. It is uncontradicted that during this "critical" period, petitioners took various actions to obtain needed supplies of vanadium oxide. (See Table appearing at page 29 of this petition for the numerous requests made by petitioners.)

On July 7, 1941, petitioners requested that the Office of Production Management intervene in their behalf to secure supplies of oxide for them. (Pls.' Ex. 132, Tr. 2265.) Union Carbide and VCA *both* declined to supply petitioners. (Pls.' Ex. 132, Tr. 2265.)

Petitioners first had asked for the oxide itself (Pls.' Ex. 77, Tr. 776), then that they at least be allowed to process the oxide for respondents (Pls.' Ex. 77, Tr. 776), and finally that the government intervene to acquire supplies for them, so serious did they consider the supply

situation to be. Yet, in every instance, petitioners were refused and they received no supply.

From October to December, 1941, petitioners frantically attempted to obtain oxide. Having been turned down by respondents, petitioners centered their attention on obtaining acid from the Defense Plant Corporation Monticello Plant, which was under the administration of VCA. (Pls.' Ex. 144, Tr. 2266-2270.) On December 3, 1941, Apex requested the Defense Plant Corporation to sell them vanadium oxide from the Monticello Plant which was to be erected. (Id., Tr. 2266.) This request was suggested to Apex by petitioners after petitioners learned that VCA was to construct the plant. (Tr. 2267.) Again on December 26, 1941, Apex wrote the Vanadium Division, Office of Production Management, seeking a source of oxide supply. (Pls.' Ex. 146, Tr. 2271-2272.) These requests were made by Apex at the urging and insistence of Mr. Leir. (Id., Tr. 2273-2275.) That Mr. Leir felt it was the better exercise of business judgment to attempt to get government aid in obtaining supplies which were denied him directly by respondents is obvious. Mr. Leir wrote:

> ". . . As far as we can see, the production of Ferro Vanadium has been mainly localized to two very big outfits in this country, and we think we are not asking too much if we apply to you for a better distribution of the available Vanadium Oxide, all the more as the Government is spending a lot of money for new production facilities and road construction out West." (Pls.' Ex. 146, Tr. 2275.)

Contrary to what the opinion of the lower Court states, the evidence showed a steady and determined joint refusal by respondents to sell to petitioners.

By February 16, 1942, petitioners had received assurances of governmental cooperation in obtaining additional supplies of vanadic acid. (Df. V's Ex. 2-A, Tr. 1176-1185, at Tr. 1177.) Four days after this letter was written, VCA held the meeting with Apex which finally resulted in direct commercial arrangements between Apex and VCA for the purchase of aluminum ingots by VCA, which, in the circumstances of this case, certainly permitted the inference to be drawn that the consideration for these arrangements was the discontinuation of the contract petitioners had with Apex. (Pls.' Ex. 62, Tr. 672-676, 1335-1336, 1947-1949, 2144-2146.)

Therefore, the record shows numerous requests by petitioners to buy from respondents a year before the notice of cancellation was sent by Apex to petitioners, deliberate refusals to deal with petitioners by respondents, and bona fide attempts by petitioners to obtain vanadic acid from other sources.

Furthermore, the refusal of Blanding Mines to deal with petitioners in January, 1942, after VCA had acquired Blanding's ore bodies, can also be construed as an act of a co-conspirator in refusing to deal.

(b) Contrary to the Statements in the Lower Court's Opinion, the Record Does Contain Evidence of the Pending Negotiations Between Petitioners and the Climax Molybdenum Co.

In the opinion below, the Court stated that the record contained no evidence of the nature of the "pending negotiations" between Climax, and petitioners.

But such a conclusion can be drawn only by ignoring completely the direct testimony of Mr. Wolf, petitioners'

Vice-President. Mr. Wolf testified that petitioners lost Climax as an associate because of respondents' interference with Climax (Tr. 978) and that respondents prevented the *continuance* of petitioners' existing relationship with Climax by their interference and threats of reprisals. He stated:

> "We had at that time lost as partners in this field Apex Smelting, who had previously manufactured ferrovanadium in conjunction with us as our partners. We had likewise lost Climax Corporation, who had done the same thing to us, and did not *continue* because of interference by the defendants with Climax." (Emphasis supplied.) (Tr. 978.)

Mr. Wolf's testimony was substantiated by other evidence. For example, on May 21, 1943, petitioners requested that Electromet fill Continental's oxide requirements *for the remainder of the year.* (D's Ex. U-4-M, Tr. 955-56.) On that date, Mr. Wolf wrote to Electromet Sales:

> ". . . We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present, these requirements are estimated to amount to about 10,000 lbs. of V contained in pentoxide *per month.*" (Emphasis added.)

Mr. Wolf testified that this request, made in the latter part of May, 1943, was specifically for a *continued* arrangement with Climax. He testified,

> "Q. Do you recall for which of these contracts you made that demand for the requirement contract?
>
> A. Which of these——?
>
> Q. For which of either the Imperial or the Climax contract?
>
> A. That was in June? No.

Q. June of '43?

A. *June of '43? That would have been probably for Climax, I would say.*

Q. Now then, you never did get the requirement contract?

A. No.

Q. In 1943, did you?

A. No." (Tr. 1018, emphasis added.)

Respondents rejected this request and denied petitioners any supply.

In other words, petitioners were requesting oxide for their Climax contract as late as June, 1943. Thus, this Court's statement that the "earlier transaction stands alone in the record as the only connection between Climax and Continental" is in error, as is its conclusion that the threat of reprisal was made to a corporation with which Continental had no business. Climax was to continue their arrangement with petitioners to produce ferrovanadium for them. Mr. Wolf so testified. (Tr. 978, 1018.) Petitioners' offer of proof showed that respondents threatened Climax with reprisals to disrupt petitioners' association with Climax and thereby prevent petitioners from staying in the vanadium business.

The Court below overlooked or failed to consider pertinent facts as to the Climax relationship. It completely and incorrectly swallowed respondents' theory of the transaction and gave petitioners none of the inferences to which their evidence entitled them.

(c) Petitioners Specifically Attempted to Obtain Vanadium Supplies From Respondents for the Imperial Paper & Color Co. Relationship

The opinion of the Court below held that petitioners could not complain of any injury because of the loss of their relationship with Imperial Paper & Color Co. because petitioners could not show that they sought to alleviate their lack of supply by seeking supplies from respondents at any time during the life of the Imperial venture.

But the proof was to the contrary. The requests for supplies made by petitioners in November, 1943, only a month and a half before the signing of the Imperial contract, were for the specific purpose of supplying Imperial with vanadic acid for its manufacturing arrangement with petitioners. (Tr. 1012-1013.) Since petitioners had been turned down previously in a period when oxide was clearly available, any trier of fact could reasonably and justly conclude that petitioners did not need to make any useless demands upon those who consistently had refused to supply them. At the time Imperial was attempting to obtain a steady supply of vanadium products for its arrangement with petitioners, respondents held a 100% control of the domestic vanadium oxide and ferrovanadium production. (Pls.' Exs. 18, 136-138, not printed.)

(d) The Nisley and Wilson Mill Was Out of Production From October, 1942, to April, 1943, as a Result of the Acts of the Respondents

The Court below stated that petitioners' refusal to buy the Nisley and Wilson Mill's production from MRC after April, 1943, prevented them from claiming any interference by respondents during the Van-Ex period. (Opinion, Appendix A, pp. 18-19.)

But the evidence showed that respondents' conspiracy to monopolize shut down the Nisley and Wilson mill from October, 1942 to April, 1943. (Tr. 662-663.) Mr. Nisley himself testified that respondents caused him to cancel his relations with petitioners (Tr. 658), and that respondents caused his mill to fall under the control of USV, an agent for MRC. (Pls.' Ex. 74, Tr. 2162-2168, Tr. 660.)

Petitioners' refusal to acquire unflaked oxide from Nisley and Wilson is not determinative of any issue whatsoever. (Tr. 932-933.) Initially, a monopolist may not demand that his competitors obtain unwanted materials after he has refused to deal with them pursuant to a purpose and intent to exclude. Secondly, at the very most, the failure to buy unflaked oxide was just a factor which the trier of fact could weigh with the other evidence to determine whether there was an exclusion.

It is submitted that it is error for a Court to usurp this jury function by rationalizing the evidence and making a determination of a question of fact, which the Court below did in this case.

(c) Petitioners' Failure to Acquire 300,000 Pounds of Oxide in January, 1944, Related Not to "Oxide", as the Court Below Concluded, But to Raw Ore in Stockpile Owned by MRC and Concerned a Time Period After Nisley & Wilson Had Already Closed Their Mill as a Result of Respondents' Activities

The opinion of the Court below is also in error in stating that Nisley and Wilson had on hand a stockpile of approximately 300,000 pounds of oxide which they tried to sell to petitioners in the spring of 1944 and which petitioners refused to buy. (Appendix A, Opinion, p. 19.)

The evidence showed that Nisley and Wilson had closed their mill in January, 1944, as a direct result of respondents' activities. (Tr. 667-668.) Therefore, Mr. Nisley was not offering petitioners the production of his mill, which was not then even in operation. Mr. Nisley was merely suggesting that he process a stockpile of raw ore located at Gateway which did not belong to Nisley and Wilson, but to MRC. (Tr. 732-734.) The offer was simply the expression of an idea. Prices, terms, and Nisley & Wilson's actual ability to obtain the stockpile were conjectural. However, in spite of this, the evidence showed that Mr. Leir stated that he would "give [Nisley] all possible cooperation". (Df. U's Ex. 2-W, Tr. 733-734.) The evidence was that Mr. Nisley was forced to terminate his production although he knew that petitioners would buy all the material he could produce. (Tr. 667.) Mr. Nisley so testified. (Tr. 667.) This is but another example where the Court below evaluated the evidence, failed to draw proper inferences and usurped the function of the jury to decide a conflict in the evidence.

(f) Petitioners' Failure to Buy Flakes From Nisley and Wilson in October, 1943, Related to a Plan in the Future Since Nisley and Wilson Were Under the Control of USV, Agent for MRC From April, 1943, to January 1, 1944

The opinion of the Court below is also in error when it states that petitioners refused oxide offers from Nisley and Wilson in November, 1943, at a time when petitioners claimed respondents failed to supply them with their requests for oxide. (Opinion, Appendix A, pp. 18-19.)

Nisley and Wilson's production was under the control of MRC from April, 1943 to January 1, 1944. (Pls.' Ex.

74, Tr. 677, 2162-2168.) It was not until the middle of December, 1943, that Nisley and Wilson learned of the cancellation of their contract by MRC (Df. U's Ex. 2-U, Tr. 729, 2440.) On December 1, 1943, USV had been given the discretion to cancel out Nisley & Wilson with the qualification that USV could continue this relationship if it believed that "this program should be continued in the interest in the procurement of other products than vanadium." (Df. U's Ex. P, Tr. 408-409.) It is obvious that in October, 1943, a time when Nisley's production was controlled by USV, Nisley and Wilson could not have been offering their production to petitioners. Obviously, Mr. Nisley was only thinking ahead to post-war conditions. (Df. U's Ex. 5-J, Tr. 1209, 2471-2473.) This is substantiated by Mr. Leir's reaction to Mr. Nisley's suggestion. Mr. Leir, rather than being uninterested, as the Court below concluded, wrote to Nisley:

> "We would also like to know whether you believe that after the war you will be in a position to either operate your own mines or to buy ore from independent miners.
>
> "The war may be over in the not too distant future, *and we would like to obtain an idea as to what your situation would be at that time.* There are already signs of abundance of basic ores and minerals, but we are anxious to cooperate with you and keep your mill running in peacetime.
>
> "*Please let us know at the same time when your present contract with the Metals Reserve Company expires.*" (Tr. 1210, 2473, emphasis added.)

II

THE DECISION OF THE COURT BELOW IS IN DIRECT CONFLICT WITH THE DECISIONS OF THE FIRST, FOURTH AND SEVENTH CIRCUITS ON THE REASONABLENESS OF PETITIONERS' EFFORTS TO SEEK ENTRY INTO THE MARKET PLACE AND THE NECESSITY OF DEMANDS OF OXIDE FROM RESPONDENTS

A. The Reasonableness of Petitioners' Conduct in Seeking Entry Into the Market Place

On the basis of the conflict presented by the evidence, only the trier of fact, the jury in the instant case, could determine the reasonableness of petitioners' conduct in seeking bona fide entry into the market place. Monopolists cannot require businessmen to take alternative courses in confronting the monopoly.

Having shown that the conspiracy to monopolize included as one of its elements the exchange of oxide between respondents in order to support each other, petitioners could rely upon their requests for supplies at reasonable prices which would allow their entry into the market place. This presented a prima facie case for the jury's determination. The Fourth Circuit held in *American Federation of Tobacco Growers v. Neal* (4th Cir., 1950), 183 F. 2d 869, that monopolists are bound to entertain business with competitors under reasonable conditions even though they possess advantages stemming from the expenditure of substantial capital. This ruling was followed by the First Circuit in *Gamco, Inc. v. Providence Fruit & Produce Bldg.* (1 Cir., 1952), 194 F. 2d 484. At page 487 that Court stated:

> "... To impose upon plaintiff the additional expenses of developing another site, attracting buyers, and transhipping his fruit and produce by truck is clearly

to extract a monopolist's advantage. [Case cited.] The Act does not merely guarantee the right to create markets; it also insures the right of entry to old ones. [Cases cited.]"

B. In Holding That a Demand for Oxide From Respondents Was Indispensable in a Case Which Showed a Conspiracy to Monopolize an Industry Resulting in 100% Control and a Purpose and Intention to Eliminate Independent Competitors the Court Below Is in Conflict With the Seventh Circuit

It is not incumbent on one who enters into the market to demand that a conspiracy to monopolize cease. Having shown that respondents were aware of petitioners' competition, and having shown a purpose and intention to eliminate them, petitioners were under no obligation to continually renew attempts to obtain supplies. *Congress Building Corp. v. Loew's, Incorporated* (7 Cir. 1957), 246 F.2d 587. At page 595, that Court stated:

". . . The defendants had a duty to refrain from acts injurious to others and we know of no rule that states that demand is necessary in an action to enforce a liability arising from a tortious act. See generally, 1 Am. Jur., Actions § 36; 1 C.J.S. Actions § 27; 86 C.J.S. Torts § 51. Neither Section 4 of the Clayton Act, nor the terms of any agreement or undertaking by plaintiff with any of the defendants, express or implied, nor the circumstances of this case require a demand as a condition precedent to the maintenance of this action."

III

THE COURT BELOW ERRONEOUSLY APPLIED THIS COURT'S DECISION IN EASTERN RAILROAD PRES. CONF. v. NOERR MOTOR FRGT., INC. (1961), 365 U.S. 127, 81 S.CT. 523, WHICH ONLY HELD THAT THE SHERMAN ACT DOES NOT APPLY TO JOINT ACTION TO LOBBY OR TO INFLUENCE THE PASSAGE OF LEGISLATION

A. Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc., Supra, Does Not Apply to the Exclusion of Competition Accomplished Under and Pursuant to the Terms of a Conspiracy to Monopolize an Industry by Predatory Business Tactics, Part of Which Conspiracy Included the Use of One of the Co-Conspirator's Subsidiaries Which Had Been Given the Power to Allocate Vanadium by the Canadian Government to Exclude Petitioners as Competitors and Arrange Market Division

The exclusion of petitioners from the Canadian market was part of an overall plan to conspire to monopolize the vanadium industry. Electromet of Canada, a Canadian subsidiary of Union Carbide, was appointed by the Canadian government to act as its agent in purchasing vanadium for its steel makers. Electromet of Canada was given authority to use its discretion in making purchases and was never authorized by the Canadian government to conspire with any other company. It was simply supposed to allocate the purchase of oxide. However, respondents, both American corporations, were engaged in a conspiracy to monopolize the vanadium industry, a part of which conspiracy was to eliminate petitioners. In furtherance of the basic conspiracy, Electromet of Canada, the wholly owned subsidiary of Union Carbide which was completely dominated and controlled by Carbide, was ordered by its parent Union Carbide to allow into Canada only shipments of oxide from Union Carbide

and VCA and to prevent and eliminate petitioners from selling their products to their customer, the Atlas Steel Co. in Canada. The power given to Union Carbide's Canadian subsidiary was used by respondents to further the basic conspiracy to eliminate petitioners. The Canadian government was not charged with any illegality in this case, and was totally oblivious to the purpose for which the Canadian subsidiary refused to allocate to petitioners or their customers. The elimination and the predatory tactics dictating the policy of the Canadian Company which brought about the elimination of petitioners took place in the United States and was an arm of the American conspiracy. The citation by the Court below to *Eastern Railroad Presidents Conference v. Noerr Motor Freight, Inc., supra*, to support the proposition that the above described conduct does not violate the Sherman Act is erroneous.

The *Noerr* case is a narrow and specific holding that the Sherman Act does not control joint action to lobby or to influence the passage of legislation, although, even in this field, this Court concedes "There may be situations in which a publicity campaign, ostensibly directed toward influencing governmental action, is a mere sham to cover what is actually nothing more than an attempt to interfere directly with the business relationships of a competitor and the application of the Sherman Act would be justified". (81 S. Ct. 533.) It is clear that the purpose and objective in the *Noerr* conspiracy was to associate and bring about forceful lobbying campaigns for the advantage of the lobbying group. The Canadian market arrangement, in the instant case, was a

strict and classic market division agreement under which Union Carbide instructed its Canadian subsidiary to allocate vanadium imports only to Union Carbide and VCA, to eliminate petitioners from the Canadian field, to take away petitioners' Canadian customers, and to allocate those customers between VCA and Union Carbide. (Tr. 828.) This traditional, predatory conduct has always been held to violate the Sherman Act. Furthermore, the elimination of competition, even under the tacit approval of governmental representatives, does not grant any kind of immunity from Sherman Act violations. *United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150 (1940). Acts done to give effect to the conspiracy may be in themselves wholly innocent acts, but still the conspiracy taken as a whole may violate the Sherman Act. *American Tobacco Co. v. United States*, 328 U.S. 781 (1946). The present action was against private corporations for their private action and does not, for example, involve in any way "state action" as was involved in *Parker v. Brown*, 317 U.S. 341 (1943).

B. Respondents' Unlawful Use of the Subsidiary's Canadian Agency Agreement for the Purpose of Violating the Anti-Trust Laws Did Not Immunize Respondents From Liability

Private corporations such as Union Carbide and VCA are not immune from the anti-trust laws if they conspire to violate the anti-trust laws, and if, as part of that conspiracy, they unlawfully use an agency agreement which the Canadian government has with one of their wholly controlled subsidiaries, to eliminate competitors from the Canadian market. Private corporations who undertake, through subsidiaries or otherwise, to assume certain

functions for the government are themselves responsible for their own tortious conduct when said conduct conflicts with the anti-trust laws. It is fundamental that legal means may not be used to accomplish an illegal objective and that the cloak of an agency agreement cannot be used to violate the Sherman Act.

In *Atchison, Topeka & S.F. Ry. Co. v. Aircoach Transport Ass'n* (D.C. Cir. 1958), 253 F. 2d 877, cert. denied 361 U.S. 930 (1960), it was held that even though the alleged conspiratorial agreements were within the specific immunity section of the Interstate Commerce Act and although a certificate of immunity may have been obtained, the agreements therein concerned nevertheless would be held to be violations of the anti-trust laws if they were part of a plan of conspiracy to eliminate competition. The Court held (p. 887):

> ". . . Even though it should be found in the end that the practices as such have been validly immunized by section 5a approved agreements, nevertheless, if they are part of an effort by Railroads in combination or conspiracy to eliminate the competition of Aircoach, rather than used merely to meet that competition, the practices would be removed from the protection of section 5a (9)."

In *State of Georgia v. Pennsylvania*, 324 U.S. 439 (1945), defendants contended, in answer to a charge that they had fixed rates in violation of the anti-trust laws, that the ICC had actually approved the rates under the ICC Act standards. This Court held that even though rates were cleared by the ICC, the anti-trust laws were violated if the rates fixed, although reasonable and non-discriminatory, were restrictive rather than competitive.

Similarly, in *United States v. Socony-Vacuum Oil Co., supra*, this Court held that defendants were not immunized from violations of the anti-trust laws merely because government employees knew or approved of the activities in question.

To the same effect are: *Kobe, Inc. v. Dempsey Pump Co.* (10 Cir. 1952), 198 F. 2d 416, cert. denied 344 U.S. 837 (1952); *Bankers Life and Casualty Company v. Larson* (5 Cir. 1958), 257 F. 2d 377; *Floyd v. Gage* (4 Cir. 1951), 192 F. 2d 137; *Crammer Co. v. Du Pont* (5 Cir. 1955), 223 F. 2d 238, cert. denied 350 U.S. 848.

It has been long established that immunity from the anti-trust laws will not be created by implication, and that even when granted, the immunity will not extend to acts beyond the legitimate objects of the conduct immunized. (*United States v. Borden Co.*, 308 U.S. 188 (1939); *Maryland & Virginia Milk Pro. Ass'n v. United States*, 362 U.S. 458 (1960); *United States v. Radio Corporation of America*, 358 U.S. 334 (1960).)

As stated by this Court in *Maryland & Virginia Milk Pro. Ass'n v. United States, supra*, the full effect of the immunity provision involved therein was that although a group of farmers acting together could not be restrained:

> ". . . 'from lawfully carrying out the *legitimate objects* thereof' (emphasis supplied), but the section cannot support the contention that it gives such an entity full freedom to engage in predatory trade practices at will. [cases cited.]" (pp. 465-466.)
>
> * * * * *
>
> ". . . It does not suggest a congressional desire to vest cooperatives with unrestricted power to restrain trade or to achieve monopoly by preying on inde-

> pendent producers, processors, or dealers intent on carrying on their own business in their own legitimate way." (pp. 466-467.)

In the same way, the fact that Electromet of Canada had an agency contract with the Canadian government is basically immaterial when it was proved that the corporation was under the complete domination and control of Union Carbide and that the agency relationship was used by Union Carbide and VCA to further a monopoly and conspiracy to control the American vanadium industry and, in furtherance of said conspiracy, to eliminate petitioners' Canadian business and thereby destroy them as a competitor to respondents in the American vanadium business. The citation by the Court below in the *Noerr* case as controlling was erroneous and completely beyond the scope, purpose and intent of the *Noerr* decision.

In *United States v. Griffith*, 334 U.S. 100 (1948), this Court held (p. 107):

> "It follows *a fortiori* that the use of monopoly power, however lawfully acquired, to foreclose competition, to gain a competitive advantage or to destroy a competitor, is unlawful."

V

THE DECISION BELOW IS IN CONFLICT WITH THE SEVENTH AMENDMENT OF THE CONSTITUTION AND THE DECISIONS OF THIS COURT WHICH PREVENT THE REEXAMINATION OF FACTS TRIED BY A JURY

A. An Appellate Court Does Not Have the Inherent Power to Review Judgments Based on Facts Submitted to a Jury Without Having the Issue of Sufficiency of the Evidence Properly Raised by Appeal From a Prior Determination by the Trial Court

Petitioners respectfully urge that the procedure adopted by the Court below is in basic conflict with the Seventh Amendment of the Constitution and the decisions of this Court.

The Court below assumed that it had the power to review a judgment based on a jury verdict after the issue of causation had been given to the jury by the trial Court even though the trial Court had not at any time ruled on the sufficiency of the evidence and respondents had filed no cross appeal specifying the evidentiary issue as a point on appeal. In their appeal from the judgment, petitioners raised serious legal questions. Without any prior ruling by the trial Court, without any cross appeal, without any specification of error on the factual issue of causation by respondents, the Appellate Court volunteered to review the evidence and replace the jury as the trier of fact. It is basic that Appellate Courts can review facts only after the trial Court has made definite rulings on them as a matter of law or only after such issues have been raised by proper motion or appeal. *Parsons v. Bedford*, 3 Pet. 433, 7 L. Ed. 732 (1830); *Aetna Life Ins. Co. v. Ward*, 140 U.S. 76 (1891).

In *Slocum v. New York Life Ins. Co.*, 228 U.S. 364 (1913) and *Aetna Insurance Co. v. Kennedy*, 301 U.S. 389 (1937) this Court held that it was unconstitutional for an appellate Court to enter judgment upon appeal from a losing verdict when the trial Court did not reserve a ruling as to the motions attacking the sufficiency of that evidence. In *Baltimore & Carolina Line v. Redman*, 295 U.S. 654 (1935) this Court held that an appellate Court could enter judgment after verdict and contrary thereto where, in accordance with state practice, the district judge had expressly reserved decision on a motion for directed verdict and ruled on that motion after the jury verdict had been received. And in *Galloway v. United States*, 319 U.S. 372 (1943) this Court affirmed the right of the appellate Court to sustain a trial Court's ruling as to the sufficiency of the evidence.

But in each of these cases there was a *prior* ruling by the trial Court at the trial level determining the sufficiency of the evidence *as a matter of law*, which was then properly raised in the appellate Court as a matter of law and as a legal issue. The appeal then was from a ruling of the trial Court. This was a legal issue. In *Redman*, the ruling against appellant occurred by the trial judge after a jury verdict; however, the appellate Court was reviewing a ruling brought to it on a writ of error after a ruling on the issue by the trial judge. Here the trial Court reserved motions for a directed verdict addressed to the sufficiency of the evidence; however, it never ruled on them and submitted the case to the jury. (Tr. 1989.) The trial Court entered judgment on the jury verdict. There was no ruling made by the trial Court after the verdict. No ruling

of the trial Court was appealed or raised to the appellate Court as a legal issue by appeal from any ruling addressed to the sufficiency of the evidence. Rather, the Court below undertook a voluntary review of the facts upon the theory it could sustain a judgment on any grounds without a cross-appeal. In so doing, it recognized it was in conflict with *Thurber Corporation v. Fairchild Motor Corporation* (5 Cir. 1959) 269 F. 2d 841, which is the *only* case in point. Therefore, the Court below failed to follow the only authority directly in point on the issue, passing the *Thurber* case off as being "quite wrong".

But the conflict goes further than a mere conflict with the *Thurber* case. It is submitted that the appellate Court could not, under the Seventh Amendment of the Constitution, review facts and direct a verdict without having before it an appeal from a prior ruling of the trial Court raising the factual sufficiency as a question of law for review. An appellate Court reviews matters of law, not matters of fact. The procedure adopted here was not known at common law. The Court below has erroneously usurped the function of the jury to sit as a trier of fact and determine factual issues properly determinable by the jury. It has not passed on any rulings by a trial Court, for no trial Court ruling of any type was appealed from or obtained by respondents on the sufficiency of the evidence.

The Constitution prohibits what occurred here, i.e., a review of facts by an appellate Court. The prejudice to petitioner is obvious. Petitioners appealed claiming errors which they specified pursuant to appellate procedure. At no time were they apprised by respondents or any one

else that any question was being raised on appeal as to the sufficiency of the evidence until petitioners received respondents' *answering* brief. Respondents did not cross-appeal or specify the sufficiency of evidence as a point on appeal. Accordingly, any designation of the record was not made on that basis, and petitioners were limited to answering these serious allegations in a short and limited reply brief and on a record which was not designated with this issue in mind or as a point on appeal.

The entry of judgment for parties by an Appellate Court without strict conformity with Rule 50, F.R.C.P. has been discouraged by this Court and has not been allowed. *Cone v. West Virginia Pulp & Paper Co.*, 330 U.S. 212 (1947); *Globe Liquor Co. v. San Roman*, 332 U.S. 571 (1948); *Johnson v. New York, N.H. & H.R. Co.*, 344 U.S. 48 (1952). Respondents failed to urge any post verdict motions, failed to specify the sufficiency of the evidence as an issue on appeal and did not cross-appeal. Therefore, they chose to accept the submission of the case to the appellate Court *only* on the issues specified by petitioners.

B. The Opinion of the Court Below Conflicts With Established Standards Imposed by this Court on Appellate and Trial Courts in Determining Motions to Dismiss and for Directed Verdict in Order to Insure the Right to Trial by Jury

The decision of the Court below is in direct conflict with *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959) wherein the Court held that "any seeming curtailment of the right to a jury trial should be scrutinized with the utmost care" and with the Seventh Amendment which guarantees any litigant a right to a trial by jury. Peti-

ioners were deprived of this right to a jury trial by the Court below.

We respectfully urge that the Court below did not review the evidence as a whole, did not allow the petitioners the benefit of all their evidence, did not draw the inferences and presumptions which could be drawn from the evidence in favor of petitioners, against whom the verdict was directed, did not construe all presumptions in favor of the petitioners and did not resolve all doubts in favor of the petitioners. Just a reading of the opinion of the Court below and the mental gymnastics the Court undertook to rationalize the evidence to reach the conclusions it did reach should be sufficient to point out that there was a serious conflict in the evidence. That the Court below might feel that it would have ruled for respondents had it been sitting without a jury as a trier of fact is immaterial. The conclusion is inevitable that there was a conflict of evidence and that the petitioners were entitled to have this issue determined by the jury. The Court below actually weighed the evidence and made factual determinations on conflicts in the evidence. This it did on a cold record. The trial Court which heard the evidence first hand from the witnesses' lips was of the opinion sufficient evidence was present to submit the case to the jury. We respectfully submit there was such a grave departure from ordinary appellate review by the Court below in directing a verdict that petitioners were deprived of their constitutional right to a trial by jury. *Beacon Theatres, Inc. v. Westover, supra; Tennant v. Peoria & P. U. Ry. Co.*, 321 U.S. 29 (1944); *Lavender v. Kurn*, 327 U.S. 645 (1946); *Ellis v. Union Pac. R. Co.*, 329

U.S. 649 (1947); *Stone v. New York C. & St. L. R. Co.*, 344 U.S. 407 (1953); *Rogers v. Missouri Pacific Railroad Co.*, 352 U.S. 500 (1957); *Sentilles v. Inter-Caribbean Shipping Corp.*, 361 U.S. 107 (1959).

A decision which denies the right of the jury to determine the utlimate question of causation after proof of conspiracy to monopolize resulting in a 100% control of an industry and an inability by a competitor to enter into the market place ought not to prevail.

CONCLUSION

For the foregoing reasons the Petition for a Writ of Certiorari ought to be granted.

Dated, August 9, 1961.

Respectfully submitted,

Appendix A

United States Court of Appeals
for the Ninth Circuit

Continental Ore Company, a Partnership; and Henry J. Leir, Erna D. Leir, Lina Schloss, as Individuals and as Partners under the trade name and style of Continental Ore Company, Appellants, vs. Union Carbide and Carbon Corporation; United States Vanadium Corporation; Electro Metallurgical Company; Electro Metallurgical Sales Corporation; Electro Metallurgical Company of Canada, Limited; Vanadium Corporation of America, Appellees.	No. 16,149 March 22, 1961

Appeal from the United States District Court
for the Northern District of California,
Southern Division.

Before: Merrill and Magruder, Circuit Judges, and Solomon, District Judge.

Magruder, Circuit Judge.

Plaintiffs filed in the court below a treble damage antitrust complaint against defendants. Plaintiffs, a partner-

ship and the partners in it suing individually, are the successors in interest to a family corporation known as Continental Ore Corporation. Both the plaintiff partnership, Continental Ore Company, and the previous corporation will be referred to as Continental.

The guiding light in Continental has been and still is the plaintiff Henry J. Leir. Leir was born in Germany and entered the ore and metal business there. His enterprises in Germany involved for the most part the purchase of raw materials for metal producers and the sale of their finished products. Upon Hitler's rise to power Leir moved to Luxembourg, where he formed a company known as Société Anonyme des Minerais. This corporation subsequently entered into a joint venture with the Société d'Electro-Chimie de Brignoud, a French company otherwise known as Fredet-Kuhlmann. Brignoud undertook to install equipment for the production of ferrovanadium and other alloys by a process known as the alumino-thermic method; Minerais supplied the raw materials, and the profits were split evenly. In 1938 Leir moved again, this time to the United States. He organized the Continental Ore Corporation in 1939 under the laws of the State of New York.

The defendants named in the complaint are Union Carbide and Carbon Corporation, a New York corporation, United States Vanadium Corporation, a Delaware corporation, Electro Metallurgical Company, a West Virginia corporation, Electro Metallurgical Sales Corporation, a New York corporation, Electro Metallurgical Company of Canada, Ltd., a Canadian corporation, and Vanadium Corporation of America, a Delaware corporation. Several

other persons, whose names were unknown to the plaintiffs, were listed as Doe defendants.

The complaint states that, by means of a combination and conspiracy in violation of §§ 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1 and 2, defendants eliminated the plaintiffs and their predecessor in interest, the Continental Ore Corporation, hereinafter included in the term plaintiffs, from the business of producing, selling and distributing vanadium oxide and ferro-vanadium. Plaintiffs claim that they made several forays into the vanadium industry, sometimes approaching the brink of success, other times not getting quite so far. Their inability to reach the desired goal in any of their various vanadium undertakings is the gist of their complaint. They ascribe their failures to defendants' alleged unlawful course of conduct.

Vanadium is a rare metallic element found for the most part in carnotite and roscolite ores. These vanadium-bearing ores are taken from the mines to the mills where they are "crushed," "roasted" and "leached" to form a substance called red cake. The red cake is then fused into a black oxide, which is called vanadium oxide, vanadic acid, vanadium pentoxide, or V_2O_5. This oxide is then converted into ferro-vanadium through the application of great heat either by means of an electric furnace or by the alumino-thermic process. The ferro-vanadium thus produced is used by steel makers in the steel bath to add toughness and tensile strength to the steel.

According to the complaint, the defendants frustrated the plaintiffs' sallies into the vanadium field in five particulars:

(1) In 1938 Leir negotiated a contract between Apex Smelting Company of Chicago (hereinafter "Apex") and Société d'Electro-Chimie de Brignoud, the French corporation. Subsequently the plaintiffs were assigned one half of Brignoud's interest under the contract. The agreement provided that Apex was to build and operate a ferro-vanadium plant, using Brignoud's alumino-thermic method of conversion. Brignoud was to contribute the secrets of this process as its part of the project. Since the profits were to be divided equally between the two signatories to the agreement, the plaintiffs, as a result of the assignment to them, became entitled to one quarter of the profits realized from the arrangement. Plaintiffs were also appointed exclusive sales agents throughout most of the United States for the ferro-vanadium to be manufactured by Apex.

Production under this agreement was not actually begun by Apex until April, 1940. The agreement was terminated by Apex in the spring of 1942. According to the complaint, Apex ceased operations in ferro-vanadium and canceled the aforesaid agreement because a sufficient supply of oxide could not be obtained, this being attributed to defendants' antitrust violations. More specifically, in pursuance of their illegal combination and conspiracy, defendants were said to have refused to sell enough oxide to Apex and also to have prevented Apex from acquiring the necessary quantities of raw materials from other suppliers.

(2) In 1942, after the termination of the unfortunate Apex joint venture, the plaintiffs transformed rented

premises on Long Island, New York, and there packaged a vanadium compound made up of vanadium oxide and small amounts of other materials. This compound, which was sold under the trade name Van-Ex, was designed for direct use in the steel bath where it could be converted into ferro-vanadium and mixed into the steel in one operation, thereby obviating the need to produce ferro-vanadium by a separate procedure. In 1944 the sale of Van-Ex was discontinued because, according to plaintiffs' allegations, defendants' antitrust violations precluded the acquisition of sufficient oxide and ore. It is claimed that defendants refused to sell to the plaintiffs and prevented their securing raw materials elsewhere.

(3) During 1942 the plaintiffs sold substantial quantities of ferro-vanadium, apparently produced by Apex, and of Van-Ex to a Canadian company, Atlas Steels, Ltd. These sales ceased during 1943 because, as alleged, defendants agreed with Electro Metallurgical Company of Canada, Ltd., a wholly owned subsidiary of defendant Union Carbide, and the wartime agent of the Canadian Government for the purchase and allocation of vanadium products to Canadian steel firms, to eliminate Continental from the Canadian market. Pursuant to the agreement Electro Metallurgical Company of Canada refused, while exercising its powers as an agent of the Canadian Government, to purchase for and allocate to Canadian steel makers vanadium products made by the plaintiffs.

(4) During 1943, by threats of reprisals defendants allegedly forced the termination of contractual negotiations between Climax Molybdenum Corporation and the plaintiffs.

(5) In 1944 plaintiffs and Imperial Paper & Color Corporation entered into a contract much like the Apex arrangement above described, but providing in addition for the milling of oxide from vanadium ore. Imperial abandoned this contract before the production stage was ever reached because, according to the allegations, neither Imperial nor Continental was able to secure either ore or oxide with which to work as a consequence of defendants' refusal to sell supplies to them and of their actions which precluded the purchase of the same from other persons.

These five particulars by which defendants' alleged monopoly was purportedly furthered at Continental's expense are given as the reason for plaintiffs' assertion that after 1944 they could no longer operate profitably in the vanadium business. The complaint does not recite any particular activities by the defendants against the plaintiffs after 1944. In summary, plaintiffs complain that defendants conspired and combined to monopolize the production and sale of vanadium oxide and ferro-vanadium; that in pursuance of this monopolistic scheme defendants refused to supply vanadium oxide to the plaintiffs to carry on the business of producing ferro-vanadium; that defendants similarly refused to sell to plaintiffs sufficient vanadium oxide to continue the business of processing, packaging and selling Van-Ex; and that, in the course of their unlawful monopolistic conspiracy, defendants coerced the defection of one of plaintiffs' Canadian customers for ferro-vanadium and Van-Ex, namely, Atlas Steels, Ltd.; and moreover that defendants defeated the efforts by plaintiffs to enter into a successful arrangement with Climax Molybdenum Company for the produc-

tion of ferro-vanadium. The complaint states that, owing to all this,

> "Plaintiffs have lost business; the value of their trade-marks has been diminished; markets and customers which they have obtained in open competition with defendants have been taken away from them; their investments have been lost; the good will attaching to the business of Continental has been impaired—all to the damage of plaintiffs in the sum of Five Hundred Twenty-Eight Thousand Dollars ($528,000)."

This amount the plaintiffs estimate they would have made from their various vanadium ventures had not the defendants committed the above listed acts, as part of their unlawful conspiracy.

At the conclusion of the plaintiffs' case, and also when all the evidence was in, defendants moved for a directed verdict on the ground that there was insufficient evidence to establish the plaintiffs' claim to relief. The court took the motion under advisement but submitted the case to the jury, which reported a verdict for the defendants, with which verdict the trial judge noted his concurrence. Pursuant to this verdict the trial judge, on June 25, 1958, entered his judgment stating that "the plaintiffs take nothing by their complaint and that the same be dismissed and that the defendants have judgment on the verdict against the plaintiffs". It is this judgment which is now before us on appeal by the unsuccessful plaintiffs.

An appellate court reviews judgments, not the reasons which may be given in their support. It is only common sense that if, on the record before us, we determine that

the judgment is correct, it should be affirmed, regardless of the correctness of the reasons which may be given to support it. Suppose that the trial judge had decided to direct a verdict for the defendants. He would, in that event, have entered a judgment to the same effect as the one under review. If we conclude that the trial judge should have granted defendants' motion for a directed verdict, we should affirm the judgment as rendered, whatever errors appellants may convince us were made by the judge during the trial.

This proposition is well settled on the authorities. See *United States v. American Railway Express Co.*, 265 U.S. 425, 435 (1924); *Stroud v. Benson*, 254 F.2d 448, 451 (C.A. 4th, 1958); *Lady Nelson, Ltd. v. Creole Petroleum Corp.*, C.A. 2d, decided January 19, 1961. We think that the Fifth Circuit was quite wrong in *Thurber Corp. v. Fairchild Motor Corp.*, 269 F.2d 841 (1959), in holding that the foregoing rule was required to be modified or rendered inapplicable by the reasoning of the Supreme Court in *Cone v. West Virginia Pulp & Paper Co.*, 330 U.S. 212 (1947). This last-named case dealt with quite a different situation, namely, the power of an appellate court upon *reversal* of the district court where the losing party below had not moved for a judgment n.o.v. or, in the alternative, for a new trial, as provided in Rule 50(b) F.R.C.P. In the present case we propose to *affirm* the judgment of the district court. As late as 1957 the Supreme Court said, in *Jaffke v. Dunham*, 352 U.S. 280, 281 (1957), that, "A successful party in the District Court may sustain its judgment on any ground that finds support in the record," without any suggestion that this

statement had to be modified to meet the reasoning of *Cone v. West Virginia Pulp & Paper Co.*, supra.

In fact, in the situation presented we do not see how we could do otherwise than affirm the judgment under review if we would obey the commands of 28 U.S.C. § 2111 and Rule 61 F.R.C.P. If we conclude that the trial judge should have granted defendants' motion for a directed verdict, it is not apparent how any alleged error at the trial could be deemed to "affect the substantial rights of the parties" within the meaning of both 28 U.S.C. § 2111 and Rule 61. In reaching our decision we shall look not only at all the evidence admitted by the trial judge, but also at all the evidence offered by plaintiffs but excluded below.

In a treble damage action under 15 U.S.C. § 15, it is clear that the plaintiff, in order to make out a claim on which recovery might be had, has the burden of proof to establish the following elements of his case: (1) That the defendant has violated the antitrust laws; (2) that plaintiff has suffered an injury to his business or property susceptible of being described with some degree of certainty in terms of money damages; and (3) that a causal connection exists between the defendant's wrongdoing and the plaintiff's loss. See, generally, Comment, 61 Yale L. J. 1010, 1011-28 (1952). Although in the instant case the defendants challenged the sufficiency of the evidence as to the three elements of the plaintiffs' case, we shall first direct our analysis to the third element, the sufficiency of the evidence as to causation, because defendants' strongest argument seems to us to apply here. Of course, a failure by the plaintiffs to prove any one of the three ele-

ments of their case would require the trial judge to direct a verdict for the defendants.

For present purposes we shall assume that the evidence was adequate to support a jury finding that the defendants committed the violations of the Sherman Act claimed, and that the defendants did the acts mentioned as part of a plan to monopolize the marketing of ferro-vanadium. Our problem is to determine whether or not the evidence could have justified jury findings that defendants' alleged illegal acts were in fact the cause of the plaintiffs' failure in various adventures into the business of producing and selling ferro-vanadium and Van-Ex. We have come to the conclusion that the evidence offered by the plaintiffs was insufficient to justify a jury verdict that this necessary causal relation existed, and therefore that the trial judge should have directed a verdict for the defendants.

As the First Circuit recognized in *Momand v. Universal Film Exchanges, Inc.*, 172 F.2d 37, 42-43 (1948):

> "The degree of certainty required of a plaintiff in proving causation of damages is necessarily elastic. It varies with the nature of the case. Particularly in an anti-trust suit, covering as it must many imponderables, rigid standards of precise proof would make a plaintiff's task practically hopeless.
>
> . . .
>
> "To sum up: It is well appreciated that a plaintiff has a difficult task in anti-trust suit and that adherence to strict requirements of proof as to exact quantity of damage may deprive him of the substance of his rights. The law has gone far to ease that burden by permitting proof of losses which border on the

speculative, in order to implement the policy of the anti-trust laws. But a fair degree of certainty is still essential to show the causative relation of defendants' misconduct and plaintiff's injury."

No doubt, a plaintiff's difficulties of proof may be somewhat mitigated by a rule much akin to the doctrine of *res ipsa loquitur:* where the plaintiff proves a loss, and a violation by defendant of the antitrust laws of such a nature as to be likely to cause that type of loss, there are cases which say that the jury, as the trier of the facts, must be permitted to draw from this circumstantial evidence the inference that the necessary causal relation exists. *Bigelow v. RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946). See also *Eastman Kodak Company of New York v. Southern Photo Materials Co.*, 273 U.S. 359 (1927); *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931). See *Martin v. Herzog*, 228 N.Y. 164, 170-171, 126 N.E. 814, 816 (1920).

But we are not sure that *Bigelow v. RKO Pictures, Inc.*, supra, is applicable in the instant case. Appellants have complained of the loss of a few named, specific, business arrangements rather than a general loss inflicted by the defection of countless, individual customers. Direct evidence of causation was readily available to Continental, while in the case cited such direct evidence was practically impossible to come by. See, generally, Clark, "The Treble Damage Bonanza: New Doctrines of Damages in Private Antitrust Suits," 52 Mich. L. Rev. 363 (1954). Yet, even if the *Bigelow* decision could be enlisted to serve appellants' purposes, it was still incumbent upon them to show on the trial that their reiterated lack

of supplies was the result of defendants' refusals to deal with them and of defendants' efforts to prevent them from obtaining raw materials elsewhere. See *Royster Drive-in Theatres, Inc. v. American Broadcasting-Paramount Theatres, Inc.*, 268 F.2d 246, 251 (C.A. 2d, 1959), cert. denied 361 U.S. 885 (1959); *Standard Oil Company of California v. Moore*, 251 F.2d 188, 198 (C.A. 9th, 1958); *Congress Bldg. Corp. v. Loew's, Inc.*, 246 F.2d 587, 596-98 (C.A. 7th, 1957); *Milwaukee Towne Corp. v. Loew's, Inc.*, 190 F. 2d 561, 568 (C.A. 7th, 1951). This evidence is necessary in order to connect the asserted antitrust infractions with the alleged scarcity of supplies. Without such a connection, the *Bigelow* case does not come into play, for the requisite likelihood that defendants' actions caused plaintiffs' injuries is not sufficiently established to justify use of the *Bigelow v. RKO Pictures, Inc.*, supra, 327 U.S. 251, inference.

First, regarding the contract with Apex above referred to: Here, as elsewhere, the plaintiffs should have produced enough evidence to warrant a jury finding that defendants refused to sell to them and dried up other sources of raw materials.

The contract between Apex and Brignoud was executed on July 1, 1938, but it was not until the latter part of 1940 that Apex was actually ready to manufacture ferrovanadium. Between the date of the execution of the contract and April, 1940, Apex was busy seeking technical assistance from Brignoud, a task made exceedingly difficult by the growing Nazi belligerence on the other side of the ocean. This assistance was needed to determine how much aluminum should be used in the alumino-

thermic method of vanadium reduction; in other words, the amount of aluminum which, when used in the smelting process, would produce the best recovery of metallic vanadium from oxide. During this experimental period, plaintiffs made their first request for the purchase of raw materials from the defendants.

In May, 1939, and again in July and October, 1939, the plaintiff Henry J. Leir, through the Continental Ore Corporation, sought to purchase from defendant Vanadium Corporation of America certain quantities of oxide. Although these various efforts were turned down by that defendant, it is clearly in evidence that during July and August, 1939, another defendant, Electro Metallurgical Sales Corporation, a wholly owned subsidiary of defendant Union Carbide, sold to the plaintiffs 16,000 pounds of oxide. In 1939 Apex was not ready to begin making ferro-vanadium and so did not call for any oxide from Continental. The oxide which plaintiffs acquired in 1939 was sold either on the export market or to non-associated buyers in the United States. It is clear that the alleged lack of oxide during 1939 could have no bearing on the ultimate unsatisfactory outcome of the Apex agreement. What Continental wanted in 1939 was oxide to sell abroad at export prices, not oxide to be delivered to Apex for its ferro-vanadium plant, which could not use it yet.

In 1940 the story is much the same. In March Apex did make one approach to Vanadium Corporation of America seeking to buy oxide. Vanadium replied that it had no material to offer Apex at that time. Even so, during the period between September and December, 1940, Apex having first begun in August of that year to pro-

duce ferro-vanadium, Continental sold 28,000 pounds of vanadium oxide to others than Apex, which it would certainly not have done had there been a shortage either at that time or to be anticipated in the near future. If such a shortage did exist, it is hard to understand why Apex turned down proffered arrangements with the Blanding mine or with Morrison, both of which could have furnish Apex a considerable quantity of oxide. We cannot by any stretch of the imagination come to the conclusion that the refusal of Vanadium Corporation of America to sell oxide to Apex in March, 1940, contributed to a shortage of supplies at its plant.

Nor was the situation much different during 1941. We note that during that year nobody on the plaintiffs' side made any offer to buy oxide from defendants. Rather, plaintiffs wrote to defendants seeking from them offers for sale. The last of these letters was written in June, 1941, to defendant Electro Metallurgical Sales Corporation, which failed to answer. It is also in evidence that during 1941 Continental continued the practice of selling oxide indiscriminately.

Though no overtures were made to any defendant during 1942 concerning the possible purchase of oxide or ore, it is in evidence that an Apex supplier, Nisley & Wilson, sold 10,000 pounds of oxide to Vanadium Corporation of America in February of that year because Apex was unable to take that shipment owing to a fire in its ferro department.

It was not until June, 1942, that Apex canceled its joint venture arrangement with Brignoud allegedly because of the shortage of oxide resulting from plaintiffs' inability

to buy supplies from defendants and from defendants' action in preventing Apex from obtaining raw materials from other producers. As noted previously, when rejections by defendants to deal with the plaintiffs are the crux of treble damage actions under the antitrust laws, it is clearly required that the plaintiffs must show that they offered to buy and that the defendants did not sell to them. Even assuming that the failure to make offers to sell in response to plaintiffs' inquiries amounted to a refusal to deal, the last request was made a year before the alleged lack of supplies is claimed to have caused Apex to end its relationship with the plaintiffs. We hold, under the cases cited pages 8-9, *supra*, that the failure of Apex or of Continental to try to buy oxide from the defendants during the final and most critical period in the life of the Apex contract made it impossible for the jury to find that defendants' refusals to deal caused Apex to terminate the arrangement with Brignoud. In regard to the Apex venture, the judgment below is affirmed.

We come now to the plaintiffs' efforts to market the Van-Ex compound. Some Van Ex had been made by Apex before relations with Brignoud finally came to an end in July, 1942. But most of this product was manufactured by Continental in rented premises in Long Island City, New York. According to the allegations of the complaint, the sales of Van-Ex were completely stopped in 1944 for the reason that, because of the defendants' wrongdoing, Continental was never able to secure sufficient supplies of raw materials to stay in business. The defendants contended that the manufacture of Van-Ex really stopped in 1943, when Continental sold its pebble mill.

The complaint itself is somewhat confusing as to why the Van-Ex business fell off. One paragraph states that the cause of this disaster was the inability of the plaintiffs to secure raw materials through defendants' wrongful acts. Another paragraph asserts that the plaintiffs were shouldered out of the vanadium field, and specifically out of Van-Ex, by defendants' interference with Continental's primary customer for Van-Ex, Atlas Steel, Ltd., of Canada. Defendants are accused of preventing Atlas from securing Van-Ex from Continental. It seems obvious that, if lack of supplies was really the cause of Continental's undoing with regard to Van-Ex, the loss of Atlas as a customer would become irrelevant, for the absence of customers cannot hurt a seller who has nothing to sell. On the other hand, if the defection of Atlas was the cause of Van-Ex's demise, the alleged lack of supplies could have had no relevance, for an abundance of goods is of no use to a seller who lacks customers.

As to the lack of supplies needed to produce Van-Ex, the plaintiffs once again have the burden of introducing sufficient evidence to warrant the inference that they were unable to obtain oxide from the defendants or from anybody else.

The Van-Ex venture must be viewed against the background of wartime regulations and procedures. Metals Reserve Company (hereinafter MRC) was formed by the United States Government in the early months of 1942 to insure that vanadium for the war effort would be readily available when needed. MRC named defendant United States Vanadium Corporation its agent to carry out the appointed task. MRC and United States Vana-

dium Corporation had three plants at their disposal for milling oxide from ore, one run by the latter at Durango, Colorado, one by Vanadium Corporation of America at Monticello, Utah, and, toward the end of 1942, the Nisley & Wilson mill at Gateway, Colorado. These three plants processed ore furnished by United States Vanadium Corporation as agent for MRC, and the oxide produced was turned over to MRC for a fee or "toll" on each pound.

The oxide accumulated by MRC in this manner was then sold to private interests, provided the prospective buyer could receive an allocation from the War Production Board. There is no evidence that Continental had any trouble obtaining such allocations. By the end of 1943 MRC to all intents and purposes had stopped functioning. At that time the Manhattan Project, designed to make the first atomic bomb, began operations. Since uranium comes from the same ore as vanadium, control over vanadium ore was assumed by the Manhattan Project. So far, however, as can be inferred from the record, the manipulations by the Manhattan Project and by its agent, Union Mines Development Company, a wholly owned subsidiary of defendant Union Carbide, did not come into play until after the Van-Ex project had come to an unsuccessful close.

In March, 1943, Continental was granted an allocation for 20,000 pounds of oxide from the War Production Board. MRC supplied 10,000 pounds and the balance was purchased from the defendant Electro Metallurgical Sales Corporation. In making this purchase from Electro, Continental squabbled somewhat over the price but eventually the sale was made at the price offered by Continental.

Later in the same year Continental asked defendants Electro Metallurgical Sales Corporation and Vanadium Corporation of America for contracts under which it could buy from them a certain amount of oxide each month over a prolonged period, but the requests were turned down. Again, we must assume that the denial of these requests for contracts amounted to a refusal to deal with the plaintiffs.

None the less, appellants failed to show that defendants prevented them from buying raw materials from an independent supplier, namely, Nisley & Wilson. Late in 1942, at the beginning of that firm's toll agreement with MRC, some of its production was earmarked and sent to Continental through MRC. These shipments apparently stopped early in 1943. In the spring of that year MRC entered into a contract with Continental under which the production of Nisley & Wilson, or a part of it, would be shipped to Continental from time to time. In June 17,000 pounds of oxide were ready, but Continental did not wish to buy for the reason that the oxide was in lumps and Continental needed material more finely ground. Continental had bought these lumps from Nisley & Wilson in the fall of 1942 but did not want them in the summer of 1943. This may have been because Continental had sold the pebble mill which it had begun to operate in Long Island City in 1942. Moreover, because in the summer of 1943 Nisley & Wilson could not have produced oxide in forms smaller than the lumps unacceptable by Continental, the latter canceled its contract with MRC.

In October, 1943, Nisley & Wilson foresaw the end of its toll agreement with MRC and installed a flaking ma-

chine. It could now produce oxide in flakes rather than in lumps. Continental was advised of the new acquisition and a sample of oxide in the new form was submitted. Continental replied that the flakes were just what the doctor ordered, but made no effort to secure Nisley & Wilson's product. Plaintiff's witness Martin Wolf testified that this was because Continental did not know that the toll agreement was about to expire and thought that it would not be able to get anything from MRC which, says Continental, was controlled by its agent United States Vanadium Corporation. Nisley & Wilson shut down in January, 1944. It had on hand a stockpile of about 300,000 pounds of oxide which it tried to sell to Continental in the spring of 1944. Again Continental refused to buy.

We think this failure to deal with Nisley & Wilson during the Van-Ex period precludes Continental from arguing that defendants prevented the acquisition of raw materials at that time. As to Apex, appellants failed to show their inability to get oxide from defendants. With regard to Van-Ex, they failed to show that it was impossible for them to obtain supplies from an independent producer.

As to the alternative allegation, that the loss of the Van-Ex business was caused by the defendants' interference with Canadian buyers, principally Atlas Steels, Ltd., we cannot ignore the fact that Electro Metallurgical Company of Canada, Ltd., had been appointed by the Canadian Government to act as its agent in purchasing Van-Ex for Canadian steel makers. The Canadian Government established a regulation under which no vanadium oxide

(including Van-Ex) could be imported into Canada by anybody other than its agent, and Electro Metallurgical Company of Canada, Ltd., refused to purchase Van-Ex from the plaintiffs. Thus, even if we assume that Electro Metallurgical Company of Canada, Ltd., acted for the purpose of entrenching the monopoly position of the defendants in the United States, it was acting as an arm of the Canadian Government, and we do not see how such efforts as appellants claim defendants took to persuade and influence the Canadian Government through its agent are within the purview of the Sherman Act. See *Eastern Railroad Presidents Conference v. Noerr Motor Freight, Inc.*, decided by the Supreme Court February 20, 1961.

We now refer briefly to the two remaining allegations of the complaint designed to show that the defendants' illegal acts caused a failure of the plaintiffs to compete successfully in the ferro-vanadium field.

During 1943, by threats of reprisals made by one M. D. Arrouet, defendants allegedly forced the termination of contractual negotiations between Climax Molybdenum Corporation and the plaintiffs. The trial judge excluded all evidence dealing with the alleged threats of reprisal; therefore we look to appellants' offer of proof to determine what the story was. Appellants offered to demonstrate that Mr. Arrouet was a highly placed representative of defendants Union Carbide group. It is admitted that he was not an officer of any of the defendants, but it is alleged that his threats of reprisals ought to bind Union Carbide and Electro Metallurgical Company. Appellants' offer of proof would show that Arrouet threatened that if Climax undertook the manufacture of ferro-

vanadium for Continental, the defendants would enter the industry as a reprisal against Climax.

For present purposes we shall assume that Arrouet said what appellants say he said, and we shall also assume that his statement is to be considered the statement of those defendants in the Union Carbide group. The difficulty with appellants' position in this regard is that the record contains no evidence of the nature of the alleged pending negotiations with Climax. There had been, in February, 1943, an earlier arrangement between Continental and Climax, which it appears was completed. By the end of April, 1943, Continental had shipped the agreed poundage of vanadium oxide to Climax, and Climax had converted this material in accordance with its part of the bargain. This earlier transaction stands alone in the record as the only connection between Climax and Continental. Thus even if Continental and Climax were threatened with reprisals, the evidence does not reveal the result of such threats. On the basis of the evidence in the case, the threat of reprisal appears to be one directed against a corporation with which Continental had no business, since the nature and existence of the alleged "pending negotiations" are not shown by the record. Appellants have thus failed to show any injury resulting from the alleged threats. There must be an injury, together with a wrong and a causal connection between the two, before liability can result.

The remaining instance given in the record is the so-called Imperial venture. On January 4, 1944, Continental Ore Corporation and Imperial Paper & Color Corporation, incorporated in New York, entered into a contract

calling for the manufacture of vanadium products. Continental was appointed the exclusive sales agent for these products. Imperial was to pay Continental a commission on all sales made. Imperial was also to install the necessary equipment and give Continental the first opportunity to supply Imperial's total requirements for raw materials. Imperial had some raw materials of its own as by-products of its other business. The Continental-Imperial contract was made contingent upon the decision of Imperial to manufacture vanadium from other raw materials than its chromite by-products. If Imperial should decide not to enter this new field of production, the contract was to become null and void.

This is exactly what transpired. In December, 1944, Imperial wrote Continental that it was not yet willing to begin the manufacture of ferro-vanadium as called for in the contract between them. It is clear from this letter that Imperial was worried over the sources of supply of vanadium-bearing raw materials. Similar letters from Imperial to Continental were written on April 9, April 13, and May 11, 1945. Sometime during 1945 Imperial decided not to go into the ferro-vanadium venture with Continental and chose to exercise its right under the contract to call the agreement off. The arrangement never got started. Imperial did not install the necessary equipment and no ferro-vanadium was produced.

The various communications from Imperial to Continental show clearly that Imperial was dissuaded from entering this field because of the lack of sources of raw material. It is the appellants' position that they could not get a steady, uniform supply of raw materials because of

defendants' alleged antitrust infractions. There is a great deal of evidence showing that various sources of vanadium other than vanadium oxide mined on the Colorado plateau were available to Continental during the life of the Imperial contract. These included lead vanadate from Africa, vanadium ash from Peru, flue dust from ocean-going vessels burning certain Venezuelan and Mexican oils, and something called cuprodescloizite ores. Mr. Wolf, the vice-president of Continental, testified that it would be almost impossible to produce vanadium from these raw materials unless they could be gotten in a steady and uniform manner. Be that as it may, the evidence in regard to the period of the Imperial venture shows the failure on the part of appellants to offer to buy raw materials from the defendants. As we have observed in regard to the Van-Ex venture, both Electro Metallurgical Sales Corporation and Vanadium Corporation of America turned down requirements contracts with Continental late in 1943. At this time the supplies of Nisley & Wilson were available to Continental and were not procured from that firm. The Imperial contract was entered into in January, 1944, and cancelled sometime in 1945. Yet from the end of 1943 until 1946, when Electro Metallurgical Sales Corporation gave Continental a requirements contract for vanadium oxide, appellants made no move to obtain the allegedly necessary steady and uniform source of supply from any of the defendants. This is much like the Apex situation except that here there were no offers to buy during the entire life of Continental's arrangement with Imperial. Surely Continental cannot complain that the defendants did it wrong when it cannot show that it sought

to alleviate its situation by seeking supplies from the defendants at any time during the life of the Imperial venture.

A judgment will be entered affirming the judgment of the District Court.

(Endorsed) Opinion Filed March 22, 1961.

Frank H. Schmid, Clerk.

Appendix B

United States Court of Appeals
For the Ninth Circuit

No. 16,149

Continental Ore Company, et al.,
Appellants,
vs.
Union Carbide and Carbon Corporation,
Appellees.

Appeal from the United States District Court for the Northern District of California, Southern Division.

This Cause came on to be heard on the Transcript of Record from the United States District Court for the Northern District of California, Southern Division and was duly submitted.

On consideration whereof, It is now here ordered and adjudged by this Court, that the judgment of the said District Court in this Cause be, and hereby is affirmed, with costs in favor of the appellees and against the appellants.

It is further ordered and adjudged by this Court that the appellees recover against the appellants for their costs herein expended, and have execution therefor.

(Endorsed) Judgment filed and entered March 22, 1961.
Frank H. Schmid, Clerk.

Appendix C

United States Court of Appeals
For the Ninth Circuit

Excerpt from Proceedings of Monday, May 15, 1961.

Before: Magruder, Merrill, Circuit Judges, and Solomon, District Judge.

On consideration thereof, and by direction of the Court, IT IS ORDERED that the petition of appellants filed April 21, 1961, and within time allowed therefor by rule of court, for a rehearing of above cause be, and hereby is, denied.

Appendix D

Section 1. Sherman Act

July 2, 1890, Chap. 647, Sec. 1, 26 Stat. 209; August 17, 1937, Chap. 690, Title VIII, 50 Stat. 693; July 7, 1955, Public Law 135, 84th Congress, 1st Session; 15 U.S. Code, Sec. 1.

Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal: . . .

Section 2. Sherman Act

July 2, 1890, Chap. 647, Sec. 2, 26 Stat. 209; July 7, 1955, Public Law 135, 84th Congress, 1st Session; 15 U.S. Code, Sec. 2.

Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding fifty thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

Section 4. Clayton Act

October 15, 1914, Chap. 323, Sec. 4, 38 Stat. 731; 15 U.S. Code, Sec. 15.

Sec. 4. Any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor in any district court of the

United States in the district in which the defendant resides or is found or has an agent, without respect to the amount of controversy, and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee.

CONSTITUTION OF THE UNITED STATES
AMENDMENT VII—CIVIL TRIALS

In Suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise reexamined in any Court of the United States, than according to the rules of the common law.

28 U.S.C., Section 2072, Fed. Rule Civ. Pro. 50(b):

Section 2072. Rules of civil procedure for district courts.

The Supreme Court shall have the power to prescribe, by general rules, the forms of process, writs, pleadings, and motions, and the practice and procedure of the district courts of the United States and of the District Court for the Territory of Alaska in civil actions.

Such rules shall not abridge, enlarge or modify any substantive right and shall preserve the right of trial by jury as at common law and as declared by the Seventh Amendment to the Constitution.

• • • • • • • • • • • • •

Federal Rule of Civil Procedure, 50(b) provides:

Rule 50.—MOTION FOR A DIRECTED VERDICT

• • • • • • • • • • • • •

(b) *Reservation of decision on motion.* Whenever a motion for a directed verdict made at the close of all the evidence is denied or for any reason is not granted, the court is deemed to have submitted the action to the jury subject to a later determination of the legal questions raised by the motion. Within 10 days after the reception of a verdict, a party who has moved for a directed verdict may move to have the verdict and any judgment entered thereon set aside and to have judgment entered in accordance with his motion for a directed verdict; or if a verdict was not returned such party, within 10 days after the jury has been discharged, may move for judgment in accordance with his motion for a directed verdict. A motion for a new trial may be joined with this motion, or a new trial may be prayed for in the alternative. If a verdict was returned the court may allow the judgment to stand or may reopen the judgment and either order a new trial or direct the entry of judgment as if the requested verdict had been directed. If no verdict was returned the court may direct the entry of judgment as if the requested verdict had been directed or may order a new trial.

PLAINTIFFS' EXHIBIT 51 FOR IDENTIFICATION

(Excluded by the Trial Court)

COPY

U. S. Vanadium Corporation, New York City.

Mr. F. P. Gormely, March 25, 1936.
Room 1715, Building.

Messrs. F. H. Haggerson, VANADIUM SITUATION
W. H. Sneath, Vanadium Corp. of America.
J. M. Price.

Dear Mr. Gormely:

On Monday I had a talk with Mr. Bransome and Mr. Rees of the Vanadium Corporation of America in reference to the purchase of some of the equipment now at their Naturita Plant for use in our Paradox Valley Plant at Uravan. Previous conversations in regard to the use of the Naturita Plant were reviewed by Mr. Rees and myself for the benefit of Mr. Bransome.

It was then brought out that we had selected the Uravan Plant site for purely economic reasons. I explained that Uravan was 15 miles closer to rail at Grand Junction, which railroad point enabled us to use the new Dolores River road, thereby shortening the hauling on finished product and supplies. Also, the Uravan site was more central to our ore supply, and the saving in hauling alone would, practically, build the plant. I further explained that with our manufacturing process as it had been developed, the Naturita Plant would have to be entirely rebuilt with the exception of the single roaster installation. I stated that there was some of the equipment in the Natu-

rita Plant which we could use, and would be glad to consider its purchase; also, such ore supplies as they had available.

The outcome of this discussion was that at the present time the Vanadium Corporation of America would not consider dismantling their Naturita Plant and would keep their investment intact. They would consider the leasing of the Plant or an outright sale. This subject was not discussed further, because the Naturita site is not desirable for economic reasons, and the fact that the Vanadium Corporation of America have an exalted idea of the value of the Naturita Plant, regardless of the operating failure they have already experienced.

The discussion then turned to the vanadium situation in general. Mr. Bransome stated a reduction in price of V in ferrovanadium is indicated, but that a small reduction would do no good; and that their cost of producing vanadium was so high a considerable reduction could not be made. I asked him what he thought would be a "considerable reduction", and he said to $2.25 or $2.10 per pound. He went on to say that with the fused oxide costing him 80¢ per pound there was little profit in vanadium at the present prices. It developed when he was roughly casting up these figures, that in their present practice it requires 2.2 lbs. of V_2O_5 to make 1 lb. of V in ferro.

Mr. Rees is the Vice President of the Vanadium Corporation of America, and a Mining Engineer. He is responsible for the Peruvian operation. He told Mr. Bransome that our costs at Rifle were between 60¢ and 70¢ per pound of V_2O_5, and assumed it as being 65¢. With this assumption he considered 80¢ per pound was about

as cheap as we could be expected to sell fused oxide from our present stocks. I stated that the Rifle production was, probably, cheaper than the Peruvian production in any case—to which he made no reply.

In regard to the Peruvian production I said it was evident they had resumed operations in Peru, judging from the amount of concentrates they had been importing over the last few months, which amounted (up to February 1st) to 709 tons containing an equivalent of, approximately, 230,000 pounds of V_2O_5 in fused oxide.

Mr. Bransome stated in answer to this that they had resumed operations in Peru on a reduced scale and expected to continue this production all this year. He said the object of this operation was so he could find out exactly what the production cost; that some economies were being put into effect; and that the figures of the past operation were not clear, and he was finding out the facts for himself. The same crew is operating, and Charlie Fritz is still in charge.

Apparently, there has been much discussion between Mr. Bransome and Mr. Rees in reference to a purchase contract with us, because Mr. Rees called to Mr. Bransome's attention the fact that the Rifle production at 65¢ per pound V_2O_5 included a high depletion charge. Mr. Rees said we had purchased the Rifle properties at a relatively high figure and that his estimate was the depletion charge must have been about 25¢ per pound. He further stated that our Paradox Valley investment was relatively small and the depletion charge would, practically, be negligible —so costs at the Uravan operation would be somewhere

between 40¢ and 50¢ per pound. He inferred they could not hope to secure this cost in Peru and, apparently, they have had many discussions about this Peruvian operation, and I am under the impression that Mr. Rees is not in favor of it. I asked how much V_2O_5 they would produce in Peru this year and they replied, probably about 500,000 pounds, but the production would depend upon the success of the operation as they planned it.

Mr. Bransome stated he believed in laying his cards on the table in regard to vanadium production, that he knew he could not fool us, and any other attitude would be foolish to take. He said when he found out what his costs were going to be in Peru, he believed it would be advantageous for all concerned to get together on one production operation. He said that by the time he was ready to discuss this situation we would, probably, know just what our costs would be at the Uravan Plant. Mr. Bransome asked what our costs at that Plant would be. I told him we were in no position to make any definite statement as to this cost at this time, because we were making some changes in the process and were not certain as to how these changes would affect the costs.

Mr. Bransome stated many times that he was very anxious to reduce the cost of V_2O_5 production to a point where a considerable reduction in the sales price of V in FeV could be made. In this respect I said that there seemed to be a difference of opinion as to the advisability of reducing the sales price of vanadium as to its effect upon sales. Mr. Bransome said his contacts with the steel people seemed to indicate that a considerable reduction would stimulate the use of vanadium.

The vanadium production contemplated by the Molybdenum Corporation of America at their Mammoth operation, was discussed and Mr. Bransome wanted to know what I knew about it. I reviewed the Mammoth operation as I knew it—which was to the effect that so far the production of vanadium and molybdenum at the Mammoth had been uncertain and disappointing, but that they planned to build a new mill and could recover, according to my figures, approximately 300,000 pounds V_2O_5 yearly. This production would be in the form of a lead-molybdate and lead-vanadate concentrate containing gold and silver.

I told them that information I had was to the effect that the Molybdenum Corporation had not been very successful in separating the vanadium and molybdenum from these concentrates. Mr. Bransome said that Mr. Hirsch had been to see him a couple of times about reducing these concentrates for him and purchasing the vanadium. Mr. Bransome said he had not been able to find out from Mr. Hirsch how much vanadium product or residue he actually had at present, nor in what form it was—and wanted to know what information I had on this subject. I told him my information was not sufficient to definitely state either the amount or form of the vanadium, but that I thought the vanadium was, at present, in the form of a sodium vanadate slag also containing the molybdenum, and that the molybdenum in the slag equalled about twice the vanadium content. This was the opinion of Mr. Rees also, and he stated his information on this was to the effect that the work so far carried on by the Molybdenum Corporation

on these vanadium-molybdenum concentrates had resulted in a very high cost for recovery of these metals.

• • • • •

My impression gained from this talk with Messrs. Bransome and Rees was that the Vanadium Corporation is in somewhat of a state of confusion regarding their vanadium production. It is evident that they must obtain a cheaper source of vanadium, and will use as a threat the possibilities at both their Peruvian and Naturita properties in negotiating lower prices with us the latter part of this year.

An interesting fact indicated from this conversation was that, apparently, their process for making ferro-vanadium is not as efficient as ours. It requires 2.2 lbs. of V205 for 1 lb. of V in FeV. We roughly figure 2 lbs. in our process, but the actual experience is approximately 1.9 lb. V205 for each pound of V in ferro.

The actual situation with us in the Paradox Valley is that we estimate we will be able to produce V205 for 40¢ per pound including depreciation and depletion charges, without taking any credit for uranium production. We will, at this operation, produce U308 residue as a by-product--the amount of U308 residue produced will depend upon the ores processed.

We have ores containing a high uranium content and by selective mining we can make this production, approximately, as desired. There is a market in the United States for about 250,000 pounds of U308 yearly--which is mostly imported from Belgium. It is thought that we can readily sell about 100,000 pounds of U308 yearly, principally to

the Vitro Manufacturing Company of Pittsburgh, who have already expressed a desire to purchase their supply from us. The profit on U3O8 should be about $1.00 per pound and with this credit against the vanadium production the cost of V2O5 would be about 30¢ per pound.

There are, also, possibilities with radium in making a low-grade radium sulphate residue as a by-product from the Uravan production; or it is possible to make a uranium-radium residue and be paid for the radium accordingly. This radium production, however, is uncertain and we have not estimated any credits therefrom.

Very truly yours,

ew/J. R. Van Fleet
IC
Extra cc for Mr. Gormely.

PLAINTIFFS' EXHIBIT 62 (Part)

Special Report
Gustav Laub — February 20, 1942

Apex Smelting Company
Chicago, Illinois
Mr. Edward S. Christiansen—Vice Pres.

Mr. Christiansen, Vice President of the above company, whom I have known slightly for sometime, called on me stating that they have decided to go out of the Vanadium business and that they had certain equipment and some small stock of Oxide on hand that they would like to dispose of if we were interested.

He did not have an actual list of the equipment nor of the raw materials they have on hand but from the figures he had it looked as though they have close to 50,000 pounds

of Vanadium Pentoxide containing between 78/87% V205 and about 40,000 to 50,000 pounds of Magnesite.

I told him that we might be interested in the Vanadium Oxide and possibly the Magnesite and some of the equipment which included jaw crushers and miscellaneous equipment. He promised to obtain from their Chicago offices an actual complete list of the equipment they have to offer as well as the quantities and grades of Vanadium Oxide and Magnesite and to deliver these to me the early part of next week. I told him that I would then refer this to the proper parties of our company and that we would probably be interested in the Vanadium Oxide and the Magnesite if their prices were right. He stated that they would be reasonable in their prices and did not expect to make a profit.

Mr. Christiansen further stated that they had been contemplating going out of the Vanadium business for sometime and their definite decision was reached for two reasons. First, that they had a fire in this department of their plant and secondly, that the sales contract which they had with Mr. Leir, President of the Continental Ore Corporation had not worked out very well. Mr. Leir was getting a fifty percent cut on the profits. Mr. Christiansen also stated that they had some agreements with the Shattuck Chemical Company and Niley & Smith for deliveries of Vanadium Oxide and that he would also look into this and advise us of the status thereof.

GL:KSW

Vanadium Corporation of America
Inter-Office Communication

To Mr. E. D. Bransome, President
Subject Apex Smelting Company
Chicago, Illinois

Date March 14, 1942
From Gustav Laub

Inasmuch as the following information has been conveyed verbally this memorandum therefore is for our records.

With reference to the writer's memorandum of February 20th advising that Mr. Christiansen, Vice President of the above company, had informed us that they were going out of the Vanadium business and had offered us their stocks of Vanadium raw materials, equipment, etc. as I had not heard further from Mr. Christiansen in this regard I had Larry Johnson casually contact him by phone and tell him that I had not received the information that he promised to send.

As a result, Mr. Christiansen phoned the writer and stated that in going into the matter further they had run into some legal difficulties. Mr. Leir, President of the Continental Ore Corporation, with whom Apex has an agreement to furnish their entire production of Vanadium, he acting as sales agent, objected strenuously to their breaching their contract and upon referring the matter to their counsel Apex were advised that Mr. Leir had a strong case against them and to make the most satisfactory arrangement with Mr. Leir that they could.

This resulted, Mr. Christiansen advised, in Mr. Leir putting a proposition up to them in that they would produce Vanadium at full capacity for a period of three months after which time he would take over their equipment and raw materials contracts and produce the material himself.

Mr. Christiansen therefore advised that they felt they would be obligated to produce at maximum capacity for a period of three months and had decided to proceed on this basis but that they had not come to a definite conclusion about turning over the equipment and raw materials contracts after that time. The contract with Mr. Leir, he said, extended over the balance of the calendar year.

In event that the second part of Mr. Leir's proposition does not go through Mr. Christiansen stated that they still proposed to offer us such raw materials as they have available as well as plant equipment.

The above information, at your suggestion, was conveyed by phone to Mr. E. K. Jenekes, Assistant Chief, Vanadium Branch, War Production Board.

GL:KHW

Special Report

Gustav Laub April 14, 1942

Apex Smelting Company

Chicago, Illinois

Mr. Edward S. Christiansen—Vice President

With reference to the writer's previous report of February 20th, Mr. Christiansen of the above company called again yesterday stating that they had now gotten their Vanadium situation straightened out and that they had definitely concluded to dismantle their Vanadium plant

at once and go out of the Vanadium business permanently. The equipment from their plant is now for sale. He doubted whether there would be much of the equipment that might interest us but said that the list of same would be sent to us promptly.

Mr. Christiansen stated that they had finally been able to come to an agreement with Mr. Leir of the Continental Ore Corporation, with whom they had a 14 year contract, to cancel the same. By doing so it was necessary for them, he said, to produce only enough Ferro Vanadium to complete two open orders which Mr. Leir had on his books and to continue producing Vanex (a mixture of Oxide and Aluminum which they have been supplying) up through June after which time they would be completely out of the Vanadium picture. Mr. Christiansen further stated that their contract and dealings with Mr. Leir had not proven at all satisfactory to them and that they regretted ever having gone into the business.

He further stated that he would furnish us with the names of all of their suppliers of Ores and Oxide; the principal ones apparently being Shattuck Chemical Company, and Nisley & Wilson. He appeared to be most anxious that we obtain these raw materials rather than the possibility of Mr. Leir's getting them and continuing in the Vanadium business.

We had an interesting discussion concerning low copper grained aluminum which they produce and release with necessary priority approval and I therefore turned him over to our Purchasing Department with regard to this item.

G. L.

ESC

Appendix F

ERRORS RAISED TO COURT OF APPEALS

(a) Alleged Errors as to Instructions

1. The trial court erroneously instructed the jury that proof of injury to the plaintiffs was not sufficient to warrant recovery under the antitrust laws, but that plaintiffs must, in addition, prove that the violation of the antitrust laws involved was reasonably calculated to prejudice the public interest by unduly restricting the free flow of interstate commerce, and that even if the jury should find that there were acts of defendants directed at plaintiffs alone, this was not sufficient. (Tr. 2035-2036.) This instruction was based on the Ninth Circuit Opinion in *Klor's Inc. v. Broadway Hale Stores, Inc.* (9 Cir. 1958) 255 F.2d 214, which was reversed by this Court in 359 U.S. 207 (1959).

2. The Court erroneously instructed the jury that individual business judgment was a defense to violation of the antitrust laws without qualifying this instruction by adding "in the absence of a conspiracy" or "in the absence of a purpose to create or maintain a monopoly". (Tr. 2028-2029.) This was alleged to be in conflict with this Court's Opinion in *Lorain Journal Co. v. United States*, 342 U.S. 143 (1951), and the opinion of the Ninth Circuit in *Fox West Coast Theatres Corp. v. Paradise T. Bldg. Corp.* (9 Cir. 1958) 264 F.2d 602.

3. The Court erred in not telling the jury, in answer to the question addressed to the Court by the jury, that if 95% of the sources of supply held by defendants was acquired pursuant to a conspiracy to achieve that end,

that this fact standing alone was a violation of the antitrust laws, and by not informing the jury that the antitrust laws condemn such power if it is held by one company or if held by two companies pursuant to an agreement to achieve the monopoly. (Tr. 2048-2050.) Appellants claimed that the opinion of the Second Circuit in *United States v. Aluminum Co. of America* (2 Cir. 1945) 148 F.2d 416, as approved by this Court in *American Tobacco Co. v. United States*, 328 U.S. 781 (1946) was controlling.

4. The Court erred in giving an instruction that the defendants were immune from antitrust violations as to any actions taken in the scope of their duties on behalf of the Government of the United States or on behalf of one of its agencies or services, and that said actions could form no proper part of plaintiffs' proof of conspiracy to monopolize or restrain trade in the case. (Tr. 2033.) Plaintiffs claimed this instruction to be in conflict with this Court's opinions in *American Tobacco Co. v. United States, supra; United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150 (1940); *State of Georgia v. Pennsylvania*, 324 U.S. 439 (1945), and the decisions of various Circuit Courts.

5. The Court erred in instructing the jury without qualification that plaintiffs had to prove with reasonable certainty that they would have had vanadium products to sell and would have sold them at a profit, and, further, that plaintiffs had an obligation to accept all offers of vanadium oxide at prices which would not have permitted them to operate at a profit. (Tr. 2032, 2034.) It was claimed by appellants that these instructions imposed a

greater standard of proof than required under the facts of the case and under the decisions of this Court in *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931); *W. M. Montague & Co. v. Lowry*, 193 U.S. 38 (1904) and the current decisions in *Gamco, Inc. v. Providence Fruit & Produce Bldg.* (1 Cir. 1952) 194 F.2d 484; *American Federation of Tobacco Growers v. Neal* (4 Cir. 1950) 183 F.2d 869.

6. The Court erred in not giving an instruction that a conspiracy to refuse to deal is illegal per se. (Tr. 2028; Instr. No. 10, Tr. 54.)

7. The Court erred in giving instructions as to damages in conflict with this Court's opinion in *Bigelow v. RKO Radio Pictures*, 327 U.S. 251 (1946). (Pls.' Proposed Instructions Nos. 15, 16, 17, 19, 20, 21, 22 and 24, Tr. 58-65, 67.)

(b) Alleged Errors as to the Exclusion of Evidence by the Plaintiffs

1. The Court erred in excluding evidence of the defendants' net sales, total cost of net sales, and profit before federal income and excess profits taxes pertaining to vanadium, uranium and their respective compounds for the period January 1, 1933 to and including December 31, 1947. These figures were tabulated by the defendants themselves in answer to plaintiffs' interrogatories and are set forth in Pls.' Ex. 20 for Identification. (Tr. 129-130, 134.) The admissibility of profit figures of defendants was alleged to be required by this Court's opinion in *American Tobacco Co. v. United States*, *supra*.

2. The Court erred in excluding evidence offered by plaintiffs to show the origin, nature, scope and purposes

of the alleged conspiracy between defendants. The exhibits offered related to the period prior to 1938 but were offered to show the origin of the conspiracy between defendants to control the vanadium industry which began prior to 1938 and continued after 1938 through the period for which plaintiffs claimed damages. The offer of proof as to the pre-1938 documents appears at Tr. 422-433. See Pls.' Ex. 47 for Id., Tr. 308-316, 1025-1026, 1447-1452, 1461-1463, 1477-1478; Pls.' Ex. 48 for Id., Tr. 316-318; Pls.' Ex. 49 for Id., Tr. 319; Pls.' Ex. 50 for Id., Tr. 319-320; Pls.' Ex. 51 for Id., Tr. 320-321 (Appendix E herein); Pls' Ex. 52 for Id., Tr. 321-322; Pls.' Ex. 53 for Id., Tr. 323; Pls.' Ex. 54 for Id., Tr. 323; Pls.' Exs. 67A to 67F, Tr. 601-627, 626-627. Plaintiffs claimed that the exclusion of the pre-1938 documentary evidence which corroborated Mr. Burwell's testimony was in conflict with this Court's opinion in *American Tobacco Co. et al. v. United States, supra.*

3. The Court erred in excluding patents held by VCA relating to the direct reduction of vanadium oxide by the use of fluorspar or aluminum in a steel bath, a practice challenged by respondents. The patents were offered as Pls.' Exs. 169 and 170 and were rejected at Tr. 1929-1935.

4. The Court erred in not permitting plaintiffs to prove the elimination of their Canadian business in 1943. The exhibits pertaining to this issue were marked as Pls.' Exs. 80 to 109 for Id. and offered at Tr. 801-840. With the exception of Exhibits 92 and 93, these exhibits are letters or telegrams between Continental Ore and Electromet of New York and Electromet of Canada during 1943 and early 1944 which show that Electromet of

Canada, an affiliate of Union Carbide, would not honor plaintiffs requests to ship Van-Ex or ferro-vanadium to steel companies in Canada. Continental Ore had approximately 12,000 pounds of its Van-Ex available for delivery to Canadian steel mills. However, except for 5,000 pounds shipped directly to Atlas Steels, they were unable to obtain an allocation permit from Electromet of Canada, which had been appointed to handle the allocation of vanadium supplies in Canada by the Canadian Government. The refusals of Electromet of Canada to honor Continental's requests for allocation are contained in Plaintiffs' Exs. 91, 100, 102, 104, 107 for Id. The offer of proof as to the statements of Mr. Arrouet is discussed in this Petition at pages 25-26 and appears at Tr. 813-817, 1008-1012. The identification of Mr. Arrouet and the circumstances of the conference between Mr. Wolf and Mr. Arrouet appears at Tr. 845-851.

The refusal of the Court to allow appellants to introduce this evidence was claimed to be in conflict with *United States v. Sisal Sales Corporation*, 274 U.S. 268 (1927); *Baush Machine Tool Co. v. Aluminum Co.* (2 Cir. 1934) 72 F.2d 236; and *United States v. Aluminum Co. of America*, *supra*, at 439-445.

5. The Court erred in not permitting plaintiffs to introduce evidence as to the extent of damages suffered by plaintiffs. This evidence included plaintiffs' business statements, tabulations showing plaintiffs' success in free allied markets and the expert opinions of plaintiffs. The financial statements of plaintiffs are identified as Pls.' Exs. 121 and 123. (Tr. 1083-1088; 1095-1096.) Plaintiffs' tabulations showing their success in other business lines,

including the sale and distribution of aluminum, barytes, coal derivatives, phosphates and magnesia products, deemed comparable to the sale and distribution of vanadium products for the period 1938-1957 were identified as Exhibits 124, 125 and 126. These were offered and rejected at Tr. 1097-1107.

The trial Court rejected the expert testimony of Mr. Leir at Tr. 1103-1114; it rejected the expert testimony of Mr. Wolf at Tr. 851-867. The rejection of the expert testimony of Dr. L. Vance, Professor of Accounting, University of California, and exhibits offered by him, appear at Tr. 1261-1266, these being Pls.' Exs. 139, 140, 141 for Id.

Appellants urged that this evidence was admissible under *Bigelow*.

(c) Errors in the Conduct of the Trial

Appellants also urged that the Court erred in unduly interrogating plaintiffs' witnesses, unduly commenting on the evidence, unduly interrupting examination and cross-examination of plaintiffs' witnesses with statements, comments and interrogations prejudicial to the plaintiffs' case. The following references were claimed to support this error:

(a) excessive statements that evidence admitted is of doubtful materiality (Tr. 221, 249, 325, 599, 751, 753, 1323, 1324, 1581, 1603, 1621, 1644, 1646, 1656, 1801, 1909-1911, 1924, 1979, 1984);

(b) unduly commenting on or interrogating the witnesses by leading questions, that direct testimony of the exclusion of competition or the elimination of competition by defendants was based on sound or

good business judgment (Tr. 209, 245, 246, 255, 558, 559, 561, 586, 869, 1647, 1709, 1833);

(c) unduly commenting on, or interrogating extensively, as to governmental involvement in some of the matters in issue (Tr. 293, 455, 664, 703, 727, 745, 746, 747, 760, 1080);

(d) stating in the jury's presence of the need to prove an express formal agreement or formal corporate approval before violation of the antitrust laws may be found (Tr. 563, 611);

(e) commenting favorably on the witnesses of defendants (Tr. 1454, 1455, 1461, 1465, 1487, 1492, 1826), but subjecting plaintiffs' witnesses to undue examination (Wolf, Tr. 956, 971, 978, 980; Leir, 1130);

(f) unduly commenting on an asserted lack of proof by plaintiffs (Tr. 1413, 1414, 1422, 1581, 1804, 1904, 1910-1911, 1962-1963).

(d) Errors by Counsel

Plaintiffs alleged that prejudicial error was committed when counsel for VCA informed the jury in his opening statement that the defendants had been acquitted by a jury in a prior government criminal action. (Tr. 111, 315.) Counsel for plaintiffs had objected to the statement in a prior conference in the Court's chambers. This conference was unreported. (See Tr. 1988 and the trial Court's instruction at Tr. 2037.)

Continental Ore Company, a partnership, et al.,	*Petitioners,*
vs.	
Union Carbide and Carbon Corporation, et al.,	*Respondents.*

BRIEF OF RESPONDENTS IN OPPOSITION TO PETITION FOR A WRIT OF CERTIORARI

OPINION BELOW

The opinion of the Court of Appeals is reported at 289 F.2d 86 and is reprinted as Appendix A to the petition. The District Court issued no opinion.

QUESTION PRESENTED

The only question presented upon this petition is whether the court below correctly affirmed a judgment for defendants entered upon a jury verdict, upon the ground that plaintiffs wholly failed to prove any injury and therefore no error, if found, could have affected the judgment.

The case is the common one of a failure of proof, where a claim collapses in the face of the claimant's own contemporaneous records. No principle of antitrust law is involved, and there is no conflict of authority.

STATUTES INVOLVED

The statutes involved are Sections 1 and 2 of the Sherman Act and Section 4 of the Clayton Act (cited in full and quoted in Appendix D to the Petition) and in addition the Act of May 24, 1949, Chapter 139, Section 110, 63 Stat. 105 (28 U.S.C. Sec. 2111), together with Rule 61 of the Federal Rules of Civil Procedure (Appendix A hereto).

STATEMENT OF THE CASE

Petitioners brought this suit under the Sherman and Clayton Acts, claiming that they were forced out of the business of producing and selling vanadium by respondents' alleged refusals to sell and respondents' alleged interferences with their other sources of supply.

The action was begun more than 12 years ago on July 15, 1949 (R. 25). It followed, and purported to rely on a

criminal case against the same group of defendants filed on September 2, 1948, entitled *United States v. Union Carbide and Carbon Corporation, et al.*, No. 11678, in the United States District Court for the District of Colorado. On June 4, 1957, however, the Government action was terminated, after a jury trial, by the acquittal of all defendants. No civil suit was brought by the Government at any time.

On June 2, 1958, the present case was brought to trial in the United States District Court for the Northern District of California (R. 110). The defendants in the trial court, respondents here, moved for a directed verdict "on the ground that upon the facts and the law the plaintiff has shown no right to relief" (R. 1989), and the court reserved its ruling on the motion (R. 1989). Thereafter, the jury returned a verdict for the defendants (R. 2051) and the trial court noted its concurrence with such verdict (R. 2052). Judgment was entered upon the verdict (R. 104-05) and plaintiffs appealed (R. 105-06).

Upon appeal to the Court of Appeals for the Ninth Circuit, the "complete record and all of the proceedings and evidence in the above entitled action" were designated by petitioners, and the parties designated for printing the entire transcript of testimony (see Appendix B hereto) and stipulated that all exhibits not printed could be considered on the appeal (R. 2057).[1] Following the submission of briefs and oral argument, the Court requested supplemental "memoranda . . . pointing to every specific place

[1]Thus petitioners' intimation that the court below did not have the complete record before it (Pet. 6) is misleading. Nothing material to the decision was lacking.

in the record where there is testimony or documentary evidence which will show or tend to show" the cause of termination of each of petitioners' ventures in vanadium (Appendix C hereto) and such briefs were furnished by both sides. Thereafter it entered judgment of affirmance on March 22, 1961 (R. 2583). Rehearing was denied on May 15, 1961 (R. 2584).

The Court in its opinion, written by Judge Magruder of the Court of Appeals for the First Circuit, considered all evidence offered, whether it was received or not. It assumed, without attempting to decide, that antitrust violations were proved, but concluded, in the light of the undisputed records and admissions, that petitioners' claims of injuries caused thereby were without basis in fact.

The Vanadium Industry

Vanadium is an alloy used to harden steel. It is found domestically in the same ores as is uranium, in a four-state area known as the Colorado Plateau. The ores are milled into vanadium oxide and the oxide then converted by a smelting process into ferrovanadium, the finished product, which is then added to the steel.

By reason of its competition with other and cheaper alloys, vanadium was a declining industry before World War II (R. 146, 157, 1682). In the early stages of the war, however, it enjoyed a sudden spurt in demand, principally for weapons (R. 160, 189-90, 1526) which in time produced a glut of the material by 1944 (R. 527, 969-70).

The industry was easy to enter. The ore was plentiful (R. 139) and, as petitioners conceded, anyone could find

it, mine it and mill it (R. 1199, 1553). Alternatively, anyone could simply buy vanadium oxide already milled, as petitioners readily discovered, and make ferrovanadium at will.[2]

The Petitioners

Continental Ore Company was a partnership composed of the petitioners Henry J. Leir, his wife, and his mother-in-law. During the period in suit, 1938 to 1949, Continental was engaged in trading in a number of ores and minerals, vanadium being a small part of its activities (R. 1083-86, 1103-04). It hired no metallurgists for its staff (R. 910-11) and invested nothing of consequence in the vanadium industry (R. 1211-15). It sought, during the war shortage, (1) to trade in vanadium oxide and sell it for a profit, (2) to buy vanadium oxide, induce others to process it into ferrovanadium with their capital and facilities and then sell the product, and (3) to buy vanadium oxide, repackage it and sell it under the trade name "Van-Ex" at a price greater than that permitted by the Office of Price Administration. These were the petitioners' activities until 1944, when, the war shortage being over, they lost interest in vanadium and traded in it thereafter only sporadically.

---

[2]The falsity of the "monopoly" issue was apparent at trial. Petitioners' witness on the subject, Blair Burwell, a disaffected former officer of a Carbide subsidiary (R. 135, 158, 232-34, 289-90), admitted to being a competitor of respondents (R. 516-18) and to having close financial connections with the petitioner Leir (R. 519, 541-42). The alleged monopoly was never "conceded" or "confessed" as the petition misleadingly states, *passim*, but on the contrary was negatived by the undisputed facts and, indeed, by petitioners' own experience in the industry.

The Respondents

Respondents are Union Carbide Corporation, formerly Union Carbide and Carbon Corporation ("Carbide"), United States Vanadium Corporation, a Carbide subsidiary ("USV") and Vanadium Corporation of America ("VCA"). It was undisputed that VCA and the Carbide group had long been bitter competitors on the Plateau in the vanadium business (R. 491, 504-05, 509). They were leading companies, but 40 or 50 others competed on the Plateau (R. 390) and one of them (Shattuck) had "far more ore than the Vanadium Corporation did" (R. 509). Respondents were, unlike the petitioners, in the vanadium business on a basis of permanent investment and sustained research and development (R. 1689, 145, 328, 1553-55).

Petitioners' Claims of Injury

The claim, as made out in the complaint (R. 3-25), was that respondents frustrated Continental's ventures in the vanadium field in five particulars: the Apex contract, the Van-Ex venture in the United States, the Van-Ex venture in Canada, the Climax contract, and the Imperial Paper contract. The court below in its opinion carefully reviewed each one and concluded that as to each there had been a complete lack of evidence. The gist of the complaint—the claimed inadequacy of petitioners' supplies of vanadium oxide for such ventures—evaporated in the light of petitioners' own records and their own admissions, and the Court could find no evidence of any other cause of injury involving the respondents.

The Apex Contract—1938-1942

Petitioners' first claim was that they could not get adequate supplies for their contract with the Apex Smelting Company (Complaint, para. 33, R. 18).

The contract, made in 1938, provided that Apex was to make ferrovanadium, while Continental secured the raw materials and sold the finished product (Ex. 117, R. 2187-2201, 1050). Apex terminated it in June 1942, the operation having failed for reasons having nothing to do with respondents.

The proof showed that supplies were never a problem. Continental was furnished half its supplies in 1939 by Electro Metallurgical Sales Corporation ("EMS"), a Carbide subsidiary (Ex. U-5-L, R. 1227-30, Ex. 119)[3] but made no further offers to buy from any Carbide company for the next two years.[4] VCA also offered to sell to Continental for export at its export price, but Continental refused the offer.[5]

In 1939 and 1940 Continental was not only rejecting supplies from other suppliers (Ex. U-5-K, R. 2474-84, 1219) but was reselling excess vanadium oxide at a profit to Europe, which it did until an embargo took effect

[3]Omitted from petitioners' table (Pet. 29). Continental chose to order through a man called Poliakoff, but its books show that it paid EMS directly (R. 1228).

[4]Continental made no request in October 1940, as stated in the table (Pet. 29), but rather Apex wrote to say it understood from an EMS salesman that EMS was taking no new accounts (Ex. 128, not printed).

[5]Omitted from petitioners' table (Pet. 29). VCA, as it advised Continental, did not sell domestically through brokers, but it offered to sell at its export price (Ex. 132, R. 2258, 1245, 1966-67).

in July 1940 (R. 1233-34). Even after Apex started to produce commercially in August or September 1940 (R. 1062, 1124, 1234), Continental continued to resell domestically to others than Apex, disposing of some 30,000 pounds of vanadium oxide in late 1940 and early 1941 (Ex. U-5-N, R. 1236-37). Continental's president, the petitioner Leir, testified that he was not concerned about supplies at the time (R. 1237).

Continental at the same time was suggesting that its associate Apex should commit itself to suppliers, but Apex was unwilling. Apex refused offers of supply contracts from Blanding Mines in the fall of 1940 (R. 1153-54, Ex. V-2-I, R. 1698-1700), from the Morrison mill in December 1940 (Ex. V-1-O, R. 1140-42; Ex. V-1-K, R. 2501, 1133), from the Ackerman mill in the spring of 1941 (Ex. V-1-P, R. 1142-45) and from National Vanadium Company in September 1941 (Ex. V-1-Q, R. 2507-13, 1145, Ex. V-1-R, R. 2514-15, 1151, 1152-53). These offers amounted to many times the actual production of Apex (Ex. 119, R. 2212, 1090) and far more than even its planned or paper capacity (R. 856, 1113).

Apex in late 1941 advised petitioners it wanted to terminate the contract, for a series of reasons unrelated to supplies (Ex. V-1-S, R. 1154-57). It then rejected a shipment from Nisley and Wilson (R. 669), and shortly afterwards, in February 1942, stopped shipments altogether (Ex. V-2-E, R. 1283-84), having then on hand some 50,000 pounds of vanadium oxide (R. 1287, 1331, 1342). Leir admitted at trial that further supplies were then available (R. 1175). The only Apex officer who testified (petitioners called none) made clear, as does Apex's own summary in

its final letter, that the Apex termination in June 1942 had nothing to do with supplies; it had merely proved to be a losing and highly unsatisfactory arrangement for Apex (Ex. V-2-B, R. 1187-91, 2520-22, 1287, 1290-91, Ex. V-2-G, R. 1291-95, 1361-62).

Petitioners made some claim that VCA's purchase of a portion of the Apex equipment constituted an interference with the Apex-Continental association. The proof, however, was that Apex decided to dispose of its equipment simply because it was going out of the vanadium business (R. 1284-88) and that the same equipment was offered to petitioners first, who declined to purchase it (R. 1337-38, Ex. V-2-F, R. 1288-90). Petitioners' own record references on the subject (Pet. 24-25, Pet. App. 36-37) show that Apex left the business because its "dealings with Mr. Leir have not proven at all satisfactory" (R. 1335, Ex. 62, R. 671-73) and prove nothing else.

The Van-Ex Venture—1942-1943

After the Apex termination Continental's vanadium business was largely in repackaging and selling vanadium oxide under the trade name "Van-Ex," at prices higher than those permitted by the Office of Price Administration.

The venture started as a plan to add aluminum and silicon to vanadium oxide and sell the resulting mixture (R. 844), but those familiar with metallurgy fortunately warned petitioners that such mixtures would cause explosions (Ex. V-1-T, V-1-U, R. 2517-18). Petitioners then planned to add fluorspar merely as a flux and to conceal the composition (R. 1162) but shortly eliminated that as

well; after the first shipment in 1942 Van-Ex consisted of straight vanadium oxide (Ex. V-1-X, R. 1171-72, 1007-10, 1282). The name Van-Ex was nevertheless retained, and the product was sold at $1.34 per pound as compared to the O.P.A. price for vanadium oxide of $1.10 per pound (Ex. V-2-M, R. 2555-64, 1728, 909-10).

The claim, again, was that Continental could not get adequate supplies (Complaint, para. 34, R. 18-19). Its own evidence and records, however, were all to the contrary. Shattuck continued to sell in 1942 (Ex. 118, R. 2203, 1066) as did Nisley (R. 693-94). Leir wrote in January 1943 that he had "sufficient raw material" (Ex. V-2-C, R. 1194) and admitted on the stand that his supplies at the time were "ample" (R. 1196). Nisley's government-subsidized plant produced 88,929 pounds of vanadium oxide in 1943, all of which was available to Continental, but Continental bought none of it (R. 1610, 663). It canceled one order in July, ostensibly because it was not in the form of flakes (Ex. U-3-Z, R. 931-32) although it had previously accepted oxide in the same form from another mill (R. 1612). Then in October, when the Nisley oxide was in flakes and "just what we like best," it still declined to buy (Ex. U-5-J, R. 2471-73, 1209).

The petitioners claimed some interference in 1943 with their Van-Ex sales to Canada but had no evidence of it. The evidence offered was that Electro Metallurgical Company of Canada, appointed as agent of the Canadian government to buy vanadium for the Canadian steel mills (Complaint, pp. 36-37, R. 19-21, 809, Pet. 61), declined to buy overpriced vanadium oxide from Continental. Not only was such a governmental act beyond the scope of the

antitrust laws, as the court below held,[6] but there was no substantiation of the claim that such refusal to buy was wrongfully induced. Petitioners offered no evidence on the point other than a hearsay statement attributed to an unauthorized, non-officer employee of Carbide (R. 808-39) supposedly telling petitioners they should not do business in Canada. There was no evidence introduced or offered that any respondent authorized or adopted such statement.[7]

The Climax Venture—1943

Climax Molybdenum Corporation manufactured 20,000 pounds of ferrovanadium under a specific contract with Continental which called for no further production thereafter (Ex. 111, R. 1016-17, 1014). Half of the vanadium oxide for the contract was supplied by EMS, the Carbide subsidiary (Ex. U-4-D, R. 942, Ex. U-4-E, R. 943-44).[8] Petitioners claimed that respondents interfered with further contractual relationships with Climax, but had no evidence other than the same hearsay threats described immediately above, which were supposed to relate to Climax as well as to the Van-Ex sales. Petitioners called no witness from Climax. No evidence at all was offered that

---

[6] *Yearsley v. Ross Constr. Co.*, 309 U.S. 18 (1940); *Barr v. Matteo*, 360 U.S. 564 (1959); *American Banana Co. v. United Fruit Co.*, 213 U.S. 347 (1909); *Eastern R. Conf. v. Noerr Motors*, 365 U.S. 127 (1961); *Parker v. Brown*, 317 U.S. 341 (1943); *United States v. Rock Royal Co-op*, 307 U.S. 533 (1939); *Asheville Tobacco Board of Trade Inc. v. F.T.C.*, 263 F.2d 502 (4th Cir. 1959); *Stroud v. Benson*, 155 F.Supp. 482 (E.D.N.C. 1957), *case remanded and dismissed* 254 F.2d 448 (4th Cir. 1958), *cert. denied*, 358 U.S. 817 (1958).

[7] Thus the hearsay statement was not admissible as an admission by any respondent (Restatement, *Agency* 2d, Sections 286, Comment b, and 288), and by the same token proved nothing.

[8] Omitted from petitioners' table (Pet. 29).

Climax wanted further business with Continental, or that any threats were communicated or known to it, or, if they were, that they had any effect whatever. In short, respondents had nothing to do with the Climax contract, other than to furnish half of the supplies.

The Imperial Venture—1944 and After

In January 1944, Continental made a five-year "contract" with Imperial Paper & Color Corporation for Imperial to convert oxide into ferrovanadium "contingent upon the decision of Imperial to manufacture vanadium" (Ex. 110, R. 2175-78, 1014), but Imperial never decided to begin manufacturing under the arrangement. Petitioners claim that its failure to do so was occasioned by inadequacy of supplies (Complaint, para. 35, R. 19). Petitioners called no witness from Imperial.

Once again, the claim collapses in the face of Continental's own correspondence and records.

For the entire period 1944 through 1949, petitioners can point to no refusals to sell by respondents; the record is one of refusals to buy. Continental made no offers at all to VCA in 1944, 1945, or 1946, declined an offer to sell in 1947 (Ex. 63, R. 780-83)[9] and made no requests thereafter. It made no offers to buy from the Carbide companies in 1944; it asked for and received a small supply for a test run at Imperial in 1945 (Ex. U-4-V, R. 974-75, Ex. U-4-W, R. 975-76);[10] it had requirements contracts in 1946, 1947, 1948 and 1949 for unlimited quantities (Ex. U-4-X, R. 977, Ex. U-4-Y, R. 981-82, Ex. U-4-Z, R. 982-

[9]Omitted from petitioners' table (Pet. 29).

[10]Omitted from petitioners' table (Pet. 29).

83, Ex. U-5-A, R. 983, Ex. U-5-B, R. 984, Ex. U-5-H, R. 997)[11] but failed to buy more than an insignificant amount (Ex. U-5-E, R. 2467, 991, Ex. U-5-F, R. 2468, 992, Ex. U-5-G, R. 993-94). All of these facts are baldly omitted from the table in the petition dealing with petitioners' requests to buy (Pet. 29). Also unmentioned in the petition was the flat admission of Continental's Vice President, when faced with these facts on cross-examination: "The defendants have not—no, have not refused" (R. 979).

In addition, petitioners had what amounted to unlimited supplies from other sources, but failed to buy. In 1944 the Nisley oxide already milled was still for sale (Ex. U-4-B, R. 936-37) and Nisley wanted to mill and sell more, but Continental uniformly rejected it (Ex. U-2-V, R. 732-33, Ex. U-2-W, R. 733-34, Ex. U-2-X, R. 735-36, Ex. U-2-Z, R. 738, Ex. U-3-A, R. 739, Ex. U-3-B, R. 740-41). It also refused offers from Blanding (Ex. V-2-K, R. 2533-53, 1715, Ex. V-2-L, R. 2554, 1724, 1718-19, 1725-27) and refused an opportunity to buy North Continent Mines, the source of the Shattuck supply, outright (Ex. U-5-I, R. 1204-08). Imperial also turned down numerous foreign supplies of vanadium, although Continental professed to be interested (Ex. U-3-F, R. 879-81, Ex. U-3-G, R. 881-85, Ex. U-3-H, R. 886-87, Ex. U-3-I, R. 887-89, Ex. U-3-J, R. 889-91, Ex. U-3-K, R. 893-97, Ex. U-3-M, R. 897-99, Ex. U-3-N, R. 899-901, Ex. U-3-O, R. 901-04, Ex. U-3-P, R. 904-06). Finally, although in 1944 the huge Government stockpile of 2,500,000 pounds of oxide (Ex. U-4-T, R. 968-70) was available to it in any "given quan-

[11] Omitted from petitioners' table (Pet. 29).

tity" (Ex. U-4-R, R. 964-65), Continental bought only about 5,000 pounds (Ex. U-4-S, R. 965-68). Continental's Vice President could not recall that they "bought any substantial quantities after that" from the Government supply (R. 972).

In such circumstances the charge that "Imperial was compelled to abandon the contract with the consent of *Continental* because of the inability of *Imperial* or Continental to secure vanadium oxide or vanadium-bearing ores" (Complaint, para. 35, R. 19) is not only fabricated but absurd. By 1944 production had so far exceeded demand that Continental could have increased its business tenfold, and not lacked for supplies.

Continental's reason for abandoning the vanadium business was the exact opposite of its claim: it left because vanadium had become a glut on the market. The wartime shortage upon which petitioners had temporarily traded was at an end.

ARGUMENT

A. THE DECISION BELOW DOES NOT IMPINGE IN ANY WAY UPON THE RULE OF THE EASTMAN KODAK, STORY PARCHMENT AND BIGELOW CASES. PETITIONERS IN THIS CASE FAILED TO SHOW ANY INJURY CAUSED BY RESPONDENTS, A REQUIREMENT WRITTEN INTO THE STATUTE AND UNIFORMLY RECOGNIZED BY THE DECISIONS OF THIS COURT.

The court below correctly recognized and applied the landmark decisions in *Eastman Kodak v. Southern Photo Co.*, 273 U.S. 359 (1927), *Story Parchment Co. v. Paterson Co.*, 282 U.S. 555 (1931), and *Bigelow v. RKO Radio Pictures*, 327 U.S. 251 (1946).

In those cases this Court distinguished between the fact of damage and the amount of damage, holding that although the latter could be approximated the former must be shown with reasonable certainty.[12] The sum and substance of the rule enunciated in those opinions is expressed in *Bigelow*, which states that the fact that some damage resulted from an antitrust violation must be shown as a "just and reasonable inference" from facts having a tendency to injure (327 U.S. at 264). If there is such damage so caused, then the amount of it may be approximated by reasonable estimate. But there must be some resulting injury shown, as the statute, 15 U.S.C. Sec. 15, expressly requires.

---

[12]In the present case the court below could also have correctly held that there was no proof whatever of the amount of damage. Continental presented no evidence of any *net* profits whatever on any of its vanadium operations at any time (R. 1223-27, Ex. 120, R. 2213, 1094, Ex. 121 for ident.), and merely attempted to compare with its own profits in other businesses, and with respondents' profits in vanadium and uranium combined.

These principles were fully recognized by the court below. The court questioned whether on its facts *Bigelow* was specifically applicable but correctly stated that if it was, "it was still incumbent upon [petitioners] to show on the trial that their reiterated lack of supplies was the result of defendants' refusals to deal with them and of defendants' efforts to prevent them from obtaining raw materials elsewhere" (289 F.2d at 91, R. 2573). This was plainly a correct statement of the law on the present record.

The case was tried on the theory that petitioners were forced out of the vanadium business because of their asserted inability to secure supplies of raw material. Petitioners' attempt at proof of damage was all based upon their insistence that they could sell whatever they could produce (R. 857-59) but that they were unable to get sufficient supplies for such production (R. 852-63, 1107-13). There was no effort to compute damages flowing from any other alleged injury.

The proof, however, was conclusive from admissions at trial and from petitioners' own letters and documents that Continental had adequate supplies of vanadium available during the entire period in suit. Petitioners admitted, through Leir, the adequacy of their supplies at various times in 1940, 1942 and 1943, years of general shortage. They or their associates declined to buy offered and available supplies in 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948 and 1949: that is, in every single year for which damages are claimed. They left the business in 1944, when the supply was greater than ever before, and

never tried to re-enter it, despite their requirements contracts with the very parties they now say refused to sell.

If there was any cause of damage other than the claimed supply restrictions which petitioners could show, under their complaint and their theory of the case at trial, they failed to offer any evidence of it. They argue that VCA interfered with Apex; the evidence offered was only that VCA bought certain equipment which petitioners had previously refused to buy. They argue that the Carbide companies interfered with Climax; the evidence offered was only by hearsay of a supposed threat by a non-authorized employee, never shown to have been expressed or intimated to Climax. They argue that there was an interference with their sales to Canada; the evidence offered was only of the same unrelated hearsay, together with the fact that the Canadian Government's agent declined to buy some of their overpriced vanadium. Throughout there was insinuation, but no factual backing.

In short, none of the particular claims in the present case was substantiated in the sense required by *Bigelow*: as to none did the evidence permit a just and reasonable inference that damage resulted from any proven violation. The court below fulfilled its function of reviewing the entire record, the evidence received and offered and all inferences therefrom, and properly concluded that it could find no such resultant damage. Such a decision, on this record, presents no principle of law for this Court's attention.

B. THE COURT BELOW PROPERLY AFFIRMED THE JUDGMENT UPON THE GROUND THAT ANY ERRORS IN THE TRIAL PROCEEDINGS WOULD NOT AFFECT THE SUBSTANTIAL RIGHTS OF THE PARTIES.

Petitioners ask this Court to rule that the court below was without power to affirm the judgment of the trial court upon the ground selected, which was that petitioners had failed to prove their case and that therefore any errors in the rulings or instructions were immaterial.

The rule, however, is settled by this Court that "if the decision below is correct, it must be affirmed, although the lower court relied upon a wrong ground or gave a wrong reason." *Helvering v. Gowran*, 302 U.S. 238, 245 (1937); *Brown v. Allen*, 344 U.S. 443, 459 (1953). It is likewise settled that an appellee may, without taking a cross-appeal, urge in support of the judgment any matter appearing in the record. *U.S. v. American Ry. Exp. Co.*, 265 U.S. 425, 435 (1924); *Langnes v. Green*, 282 U.S. 531, 538-39 (1931); *Jaffke v. Dunham*, 352 U.S. 280, 281 (1957). The rule of these cases is codified in the harmless error statute, 28 U.S.C. Sec. 2111, and in Rule 61, F.R.C.P. (Appendix A hereto), both cited and relied upon by the court below.

The courts of appeal have regularly applied these governing principles to affirm judgments of the trial courts. Thus they have repeatedly held that where a defendant is entitled to a directed verdict, errors in the charge to the jury, *U.S. v. J. E. Bohannon Co.*, 232 F.2d 756, 757-58 (6th Cir. 1956); *Wannacott v. Denver & Rio Grande Western R. Co.*, 187 F.2d 607, 608 (10th Cir. 1951); *Weidenfeld v. Pacific Imp. Co.*, 43 F.2d 817, 820 (2d Cir.), *cert. denied*, 282 U.S. 890 (1930); or in the exclusion of

evidence, *Syres v. Oil Workers International Union*, 257 F.2d 479, 484 (5th Cir. 1958), *cert. denied*, 358 U.S. 929 (1959); *Baird v. Aluminum Seal Company*, 250 F.2d 595, 601 (3d Cir. 1957); or both, *Monolith Portland Midwest Co. v. Western Pub. Serv. Co.*, 142 F.2d 857, 859-60 (10th Cir. 1944); *Nalbantian v. United States*, 54 F.2d 63, 64 (7th Cir.), *cert. denied*, 285 U.S. 536 (1932), are an insufficient ground for reversal upon appeal. In none of these cases did the winner of the jury verdict move for judgment notwithstanding the verdict or cross-appeal. These cases are precisely in point and they squarely depend for their reasoning on the governing principles long settled in this Court.

Petitioners cite cases which hold that the party who *loses* the verdict in the trial court and does not then ask for judgment notwithstanding that verdict cannot on appeal secure more than a new trial. *Cone v. West Virginia Paper Co.*, 330 U.S. 212 (1947); *Globe Liquor Co. v. San Roman*, 332 U.S. 571 (1948); *Johnson v. New York N.H. and H.R. Co.*, 344 U.S. 48 (1952).[13] Such cases, however, do not purport to concern the affirmance of a judgment. They deal with the rights of a party who lost the verdict and judgment in the trial court, and who has failed to comply with Rule 50(b) F.R.C.P. The latter concerns, and concerns only, the setting aside of verdicts and the

[13] *Thurber Corp. v. Fairchild Motor Corp.*, 269 F.2d 841 (5th Cir. 1959), also cited by petitioners, does not purport to be a reversal of the same court's ruling just a year before in *Syres v. Oil Workers International Union*, *supra*, or its earlier and similar decision in *Rushing v. Metro-Goldwyn-Mayer Distributing Corp.*, 214 F.2d 542 (5th Cir. 1954). The court stated (269 F.2d at 852) that "we are not ruling" that an instructed verdict should have been granted.

granting of judgment notwithstanding a verdict. The rule by its terms has nothing to do with a party's rights or duties where the verdict and judgment are favorable; plainly it does not contemplate the absurdity of a motion by the winning party attacking the verdict or judgment; and there is no suggestion in this Court's opinions discussing it that the rule has any such application.

On the contrary this Court has refuted just such an argument in one of the cases on which petitioners particularly rely. In *Story Parchment Co. v. Paterson Co.*, 282 U.S. 555 (1931), this Court held that it should consider upon the merits respondents' additional ground for sustaining the judgment below, which was that there was no evidence of an antitrust violation. Petitioners insisted that such ground was not open for consideration because there was no cross-petition for certiorari, but this Court disagreed, saying (282 U.S. at 560) "respondents do not invoke that ground in order to overthrow the judgment below, but to sustain it; and this they may do."

It follows that the argument is without support in principle, in the statute, in the Federal rules, or in the cases.

CONCLUSION

No conflict in the decisions is shown by the petition, nor any erroneous application of law. The failure of proof was complete. The petition should be denied.

Appendix A

Act of May 24, 1949, Chapter 139, Section 110, 63 Stat. 105, 28 U.S.C. Sec. 2111:

> "On the hearing of any appeal or writ of certiorari in any case, the court shall give judgment after an examination of the record without regard to errors or defects which do not affect the substantial rights of the parties."

Rule 61, Federal Rules of Civil Procedure:

> "No error in either the admission or the exclusion of evidence and no error or defect in any ruling or order or in anything done or omitted by the court or by any of the parties is ground for granting a new trial or for setting aside a verdict or for vacating, modifying or otherwise disturbing a judgment or order, unless refusal to take such action appears to the court inconsistent with substantial justice. The court at every stage of the proceeding must disregard any error or defect in the proceeding which does not affect the substantial rights of the parties."

Appendix B

Respondents file herewith under Rule 21(6) certified copies of appellants' designation of record and the designations of the record for printing filed by both parties, together with a certificate of the clerk of the court below stating that the designations for printing included all of the testimony in the trial transcript. Below are reprinted the appellants' designation of record and the clerk's certificate, omitting in each instance the title of court and cause.

DESIGNATION OF RECORD

To the Clerk of the Above-Entitled Court:

Plaintiffs-appellants in the above-entitled case having appealed to the United States Court of Appeals for the Ninth Circuit from a final judgment heretofore made and entered herein, you are hereby requested to prepare certified record of appeal in accordance with the rules of the said Court of Appeals and to file the same with the Clerk of the said Court in due course, as provided by law, to include the following:

1. The complete record and all of the proceedings and evidence in the above-entitled action.

2. This designation of record.

Dated: June 30, 1958.

Joseph L. Alioto

Joseph L. Alioto
Attorney for Plaintiffs-Appellants

CERTIFICATE OF CLERK, U. S. COURT OF APPEALS FOR THE NINTH CIRCUIT, TO SUPPLEMENTAL RECORD CERTIFIED UNDER RULE 21 OF THE REVISED RULES OF THE SUPREME COURT OF THE UNITED STATES.

I, WILLIAM E. WILSON, as Chief Deputy Clerk of the United States Court of Appeals for the Ninth Circuit, do hereby certify the foregoing documents: designation of appellants filed in the District Court, appellants' statement of points and designation or record, letter amending designation; designation of appellees' Union Carbide, et al., supplemental designation of appellees' Union Carbide, et al., letter of Clerk, U. S. Court of Appeals of April 26, 1960 to be a full, true and correct copy of documents requested by the appellees and certified as a supplemental record under Rule 21 of the Revised Rules of the Supreme Court of the United States as the originals thereof remain on file and appear of record in my office.

I further certify that I have compared the designations of the record of printing filed by the respective parties as transmitted herewith, with the reporter's transcript in this case in the United States District Court for the Northern District of California, and that the parties did designate for printing all portions of the said reporter's transcript which contain the testimony of the witnesses, and omitted portions consisting of certain statements and arguments of counsel and colloquies between court and counsel.

ATTEST my hand and the seal of the said The United States Court of Appeals for the Ninth Circuit, as the

City and County of San Francisco, State of California, this 7th day of September, 1961.

(SEAL)

WILLIAM E. WILSON

WILLIAM E. WILSON
Chief Deputy Clerk

No. 16149
Continental Ore Co. v. Union Carbide

Gentlemen:

The Court has requested my office to suggest to counsel in the above entitled case that it would be helpful to the Court if counsel would file additional memoranda (an original and three copies, which may be typewritten) pointing to every specific place in the record where there is testimony or documentary evidence which will show or tend to show:

1. The cause of the termination of Apex Smelting Company's arrangement with Continental.

2. The cause of the termination of Imperial Paper and Color Corporation's arrangement with Continental.

3. The cause of the cessation of shipments by Continental of vanadium compounds from its Long Island premises.

4. The cause of the failure of Continental to work out an arrangement with Climax Molybdenum Corporation.

The Court requests that this memoranda be filed within two weeks from today. Thank you.

Sincerely,
Frank H. Schmid
Clerk

Questions presented 4

V

Statement of the case 5

1. The complaint 5
2. The parties 8
   - A. Petitioners (Continental Ore) 8
   - B. Union Carbide 11
   - C. Vanadium Corporation of America 13
3. Monopoly control of the vanadium industry 14
   - A. Ferrovanadium 15
   - B. Vanadium oxide 15
   - C. Vanadium ore 17
4. The evidence presented at the trial 18
   - A. There was direct evidence, including a confession by one of respondents' Chief Executive Officers, that respondents had agreed to monopolize, to fix prices and to restrain trade in the vanadium industry 18
   - B. All during the period 1940 to 1942 when petitioners and Apex were attempting the manufacture and sale of ferrovanadium and receiving only irregular and sporadic supplies, USV and VCA, as part of the overall conspiracy to monopolize the vanadium industry, had arrangements whereby

Page

VCA was receiving oxide from USV at below market terms or by special arrangements 21

1. The "Maggie C" agreement 21

2. The Dry Valley agreement 22

3. Respondents fixed prices 23

4. Respondents entered into joint export orders and allocated customers 26

C. Respondents carried out a deliberate and avowed policy to eliminate competitors during the period of petitioners' attempted entry into the vanadium industry 28

1. Anaconda Copper Company 31

2. Gateway Alloys 31

3. Mesa Vanadium Mill 33

4. Loma Mill 33

5. Mammoth St. Anthony Mining Company 33

6. Blanding Mines 34

7. North Continent Mill 34

8. The Durango Mill 35

9. Nisley & Wilson Mill 35

D. Petitioners' attempts at entry into the vanadium industry 36

1. There was an admitted policy by respondents to exclude petitioners 36

2. There was direct and circumstantial evidence that respondents prevented petitioners from obtaining a steady, dependable supply of vanadium oxide, interfered with petitioners' relations with their oxide suppliers, interfered with petitioners' manufacturing associates and caused petitioners' elimination from the Canadian as well as the domestic vanadium market 39

a. Period of Apex contract (1938-1942) 39

Page

(1) Refusal of respondents to sell oxide to petitioners 40

(2) Respondents interfered with the independent oxide suppliers who were petitioners' source of supplies 44

(a) Loma Mill 44

(b) The Blanding Mines Production 44

(c) The Nisley and Wilson Mill 46

(d) Monticello 46

(3) Respondents interfered with Apex who cancelled its contract with Continental and agreed with VCA never to enter the vanadium industry again 47

b. Petitioners' attempts to persist in the vanadium business during the war period after the loss of Apex (June, 1942 to November, 1943) 48

(1) The loss of independent suppliers during this period 49

(2) In 1942 and 1943, respondents continued to refuse to sell vanadium oxide to petitioners 51

(3) The loss of relations with Climax Molybdenum Co. 52

(4) Complete prevention and elimination of petitioners from exporting their products to Canadian customers 54

c. Petitioners persisted in their attempts to enter the vanadium industry following the end of vanadium oxide stockpiling period. November, 1943 to 1946 56

(1) Respondents continued to refuse to sell vanadium oxide to petitioners, who were unable to succeed in their vanadium venture with Imperial Paper and Color Corp. 56

Page

(2) Respondents' monopoly power caused the small oxide producers to cease production in 1944 60

(a) Nisley & Wilson 60

(b) Respondents directly thwarted petitioners' plan to obtain or erect a ferrovanadium plant on the Colorado plateau 61

(3) The period 1946 and thereafter 63

(4) Petitioners experienced outstanding financial success in all fields of minerals, metals and alloys except vanadium 64

5. Opinion of the court below 65

VI

Summary of the argument 68

VII

Argument 74

A

Question 1

The determination by an Appellate Court of the question of causation as a matter of law in an action brought under Sections 1 and 2 of the Sherman Act involving an admitted conspiracy to monopolize by respondents holding 100% of the industry, after proof of an intent by respondents to eliminate petitioners and the showing of persistent and bona fide efforts by petitioners to enter the industry, coupled with proof of direct and immediate impact and harm consisting of respondents' refusals to deal, interferences with petitioners' supplies and manufacturing associates, orders to leave the industry, threats of reprisals against petitioners' manufacturing associates, and the elimination of petitioners' export market by the use of a subsidiary is contrary to the decisions of this court, the purposes of Congress and the judicial application of the Sherman Act 74

Page

A. The decision below is in basic conflict with the purposes of Congress in establishing liability on those who conspire to monopolize, with the decisions of this court which have rejected the determination of legal cause as a matter of law in Sherman Act litigation, and with decisions of this court which allow damages to those who suffer from the natural consequences of wrongful and intended acts 74

B. The decision below is in direct conflict with Story Parchment Co. v. Paterson Parchment Paper Co., 282 U.S. 555 (1931); Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946); Eastman Kodak Co. v. Southern Photo Materials Co., 273 U.S. 359 (1927), all landmark decisions of this court 81

1. The decision below is in direct conflict with Story Parchment Paper Co., 282 U.S. 555 (1931), which held that the proof of a conspiracy to monopolize contemplating the elimination of the plaintiff in an effort to maintain a monopoly control and the demise of the plaintiff-competitor presented sufficient evidence of causation to sustain a verdict for the plaintiff 81

2. The decision below is in direct conflict with Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946), which held that a wrongdoer may not object to a plaintiff's estimate of the cause of injury and its extent because it was not based on more accurate data when the wrongdoer's misconduct has rendered this information unavailable 86

B

Question 2

Petitioners, against whom a directed verdict was ordered by the Appellate Court as a matter of law, were deprived of a jury trial by the Appellate Court below which, in directing a verdict, weighed the evidence, made factual rulings on the sufficiency of the evidence of

Page

causation, did not view the evidence as a whole, did not allow petitioners the benefit of their evidence, did not allow petitioners the benefit of all inferences and presumptions that could be drawn from the evidence and did not resolve all conflicts in the evidence in favor of petitioners, all in direct conflict with rules governing the judicial review and the decisions of this court 91

A. Petitioners were entitled to a just and reasonable interpretation of the record 91

B. Only the trier of fact, the jury in this case, can draw inferences, determine the weight of the evidence, resolve conflicts in the evidence, determine the credibility of the witnesses. The court below erred in not applying these traditional rules and in making these determinations itself as a matter of law 92

C. The court below failed to give judicial meaning and content to the violations of law committed by respondents and the natural tendency of these acts to injure. Instead the court drew inferences against the petitioners so as to exact legal duties from them which are unwarranted in the law 95

D. Even assuming the correctness of the legal conclusions of the court below, the opinion of the court below conflicts with a just and reasonable interpretation of the record, for the evidence shows that by giving petitioners the benefit of all the inferences and presumptions to which the evidence entitled them and by resolving the factual conflicts in their favor, as required by the rules of judicial review, petitioners proved the very matters which the lower court stated were not proved and upon which, so the lower court stated, it was required to hold that there was no causal relationship as a matter of law between respondents' antitrust violations and petitioners' injury 100

1. Apex 101
2. Climax 105
3. Imperial 108

Page

4. Van-Ex Period and Nisley & Wilson 109
5. Petitioners' Canadian business 111

C

Question 3

The antitrust laws protect a business injured by United States corporations even though part of the means used to accomplish the injury involves the use of a private wholly owned foreign subsidiary which was given a discretionary power by an agency of a foreign government when the matters relate to ordinary commercial activity 112

A. United States corporations are liable for conspiring to eliminate the foreign trade of a domestic competitor regardless of the means used. The fact that they use a governmental agency to accomplish this result does not immunize them 112

1. The elimination of petitioners' Canadian business was part of respondents' conspiracy to eliminate petitioners from the vanadium industry 112

2. Immunity from the antitrust laws will not be implied and even if granted it will be specifically limited to the exact conduct described 114

B. A private corporation is not immune from the antitrust laws because it has an agency agreement with a foreign governmental agency if it unlawfully uses its agency powers to violate the antitrust laws 117

C. Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc., 365 U.S. 127 (1961) does not apply to the exclusion of competition accomplished under and pursuant to the terms of a conspiracy to monopolize an industry by predatory business tactics, even though part of the conspiracy included the use of one of the co-conspirator's subsidiaries which had been given the power to allocate vanadium by an agency of the Canadian Government 120

Conclusion 127

OF THE
United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as Partners under the trade name and style of CONTINENTAL ORE COMPANY,

Petitioners,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA,

Respondents.

On Writ of Certiorari to the United States Court of Appeals for the Ninth Circuit

PETITIONERS' OPENING BRIEF

I

OPINIONS IN THE COURT BELOW

The opinion of the United States Court of Appeals for the Ninth Circuit is reported in 289 F.2d 86 (1961).

No other opinions were delivered by any of the Courts below.

II

JUDGMENTS BELOW AND JURISDICTION

This was an antitrust action which was filed in the Northern District Court for the Northern District of California, Southern Division. It was tried by a jury, the late Hon. Edgar S. Vaught presiding. The jury returned a verdict in favor of defendants and judgment was entered. (R. 104-105.) Plaintiffs appealed to the United States Court of Appeals for the Ninth Circuit which affirmed the judgment. (R. 2583-2584.) Petitioners (plaintiffs below) filed a Petition for Rehearing on April 21, 1961. (R. 2584.) This Petition was denied on May 15, 1961. (R. 2584.)[1]

The jurisdiction of this Court was invoked under 28 U.S.C. Section 1254(1).

This Honorable Court granted petitioners' Petition for a Writ of Certiorari on October 23, 1961. (R. 2584.) The Certiorari was specifically limited to certain questions, which are set forth in Section IV of this Brief.

---

[1]Volumes I through VII of the Record herein cover record pages 1 through 2586 and contain the record as originally printed, which includes many of the exhibits. These volumes also include the record reference where every exhibit was offered in evidence. Whenever an exhibit is referred to herein, the reference is to the page where that exhibit appears in Volumes VI and VII of the original record, and Volumes VIII and IX of the record printed in this Court, followed by reference to the page where the exhibit was offered in evidence which will be found in Volumes I through VI of the original record. Volume VI contains pages 2069 to 2286. Volume VII contains pages 2311 to 2586. Volume VIII contains pages 1 to 314. Volume IX contains pages 315 to 610.

III

STATUTES INVOLVED

In this case, petitioners claim that respondents violated the antitrust laws. The pertinent statutes involved are:

Sherman Act, Section 1, July 2, 1890, Chapter 647, Sec. 1, 26 Stat. 208, 15 U.S. Code, Sec. 1:

> "Section 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal . . ."

Sherman Act, Section 2, July 2, 1890, Chap. 647, Sec. 2, 26 Stat. 209, 15 U.S. Code, Sec. 2:

> "Section 2. Every person who shall monopolize or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding five thousand dollars, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the Court."

Petitioners brought their action under Section 4 of the Clayton Act, October 15, 1914, Chap. 323, Sec. 4, 38 Stat. 731, 15 U.S.Code, Sec. 15:

> "Section 4. That any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy and shall recover threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee."

IV

QUESTIONS PRESENTED

In granting the Writ of Certiorari in this case, this Honorable Court limited this appeal to the following questions:

1. Whether an Appellate Court can take away from a jury the question of causal effect concerning an injury by a 100% two-company monopoly (admittedly achieved pursuant to an intent to monopolize) when the question of violation is confessed and the issue of measurement of damages is more than sufficiently supported by relevant economic data and where the destruction of the plaintiff company (petitioner herein) was admitted to be, by a chief executive officer of one of the defendants, an important goal of the monopolists?

2. Whether petitioners, an American company, can claim damages under the antitrust laws for injury caused to them by their elimination from the Canadian market by two other American companies (respondents herein) who had entered into a conspiracy to eliminate all competition and to monopolize the industry, and as part of the conspiracy, one of the respondent American companies utilized its domination and control over a wholly owned Canadian subsidiary, which had been given a discretionary power by the Canadian government to allocate the importation of vanadium into Canada during the war, to exclude the imports of petitioners (competitors) from entering Canada for sale to petitioners' Canadian customers, the refusal of the Canadian subsidiary to allocate vanadium to petitioners' Canadian customers being directed by its American parent company pursuant to the

overall conspiracy to eliminate all competition and specifically to eliminate petitioners from the American vanadium business. This issue was erroneously directed against petitioners in the Circuit Court's asserted misapplication of this Court's recent opinion in *Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc.*, 365 U.S. 127 (1961).

3. Whether petitioners, against whom a directed verdict was ordered by the Appellate Court, were deprived of a trial by jury by the Appellate Court below who weighed the evidence, made factual rulings on the sufficiency of evidence of causation, did not view the evidence as a whole, did not allow petitioners the benefit of their evidence, did not allow petitioners the benefit of all inferences and presumptions to be drawn from the evidence and did not resolve all conflicts in the evidence in favor of petitioners in direct conflict with this Court's opinion in *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959).

V

STATEMENT OF THE CASE

1. THE COMPLAINT

This action concerns the exclusion of petitioners from a monopoly industry, the milling, manufacture and sale of vanadium oxide and ferrovanadium.[2] Petitioners were

---

[2]Vanadium is a rare metallic element found in the United States on the Colorado Plateau, a geographical unit formed by the western part of Colorado, the eastern part of Utah and the northern parts of New Mexico and Arizona. The vanadium-bearing ore is first mined, then converted into vanadium oxide at mill sites, located near the ore deposits. These mills crush,

distributors and agents in these products and, after a time, in other alloy metals. (Pl. Ex. 119; R. 2212, 1089; Pl. Ex. 120; R. 2213, 1094; Pl. Ex. 124 for Id.; R. 537, 1103; Pl. Ex. 125 for Id.; R. 539, 1106.) Respondents are fully integrated miners, millers, and manufacturers of ferrovanadium, other vanadium products and other alloys and metals. (Pl. Ex. 6; R. 2069, 115; Pl. Ex. 7; R. 2072; 117.)

The complaint filed in this action alleges a classic Sherman Act case, Sections 1 and 2. (R. 3-25.) In great detail it describes the parties, the nature of the commodity involved, its uses, the background of the industry, existence of independent producers, control of the industry by respondents, a combination and conspiracy to monopolize the vanadium industry and the elimination of petitioners from the industry. (R. 3-25.)

---

roast and leach the ore to produce a substance known as "red cake". This red cake is then fused into a black oxide, which is interchangeably called vanadium oxide, vanadic acid, vanadium pentoxide or V_2O_5. (R. 166-169.) This black oxide is then converted into ferrovanadium, a ferro-alloy, through the application of great heat. This conversion may be accomplished either by means of an electric furnace or by an alumino-thermic process. Respondents utilized the electric furnace process of conversion. (R. 170-171, 1827-1828.) Petitioners utilized the alumino-thermic process, a process which is much cheaper and does not require large and expensive investments in electric furnaces. (Id., R. 841-842.)

The vanadium oxide produced at the mill sites located on the Colorado Plateau is then shipped to electric furnace plants, located in the East, for conversion to ferrovanadium. (Pl. Ex. 6; R. 2069-2072, 116.)

The major customers for vanadium products are the steel companies, which use the ferrovanadium in the steel bath to add toughness and tensile and torsional strength to the steel. (R. 1523-1529.) Vanadium steels are used in the manufacture of high speed tools, machine and automobile parts, and in armor plate.

The complaint charges respondents with violating Sections 1 and 2 of the Sherman Act pursuant to an agreement to control and dominate the production and sale of ferrovanadium and vanadium oxide, to suppress competition between themselves and to fix prices. (R. 13-15.)

The complaint alleges further that pursuant to this combination and agreement, Electromet Sales, one of the respondents, supplied VCA, another of the respondents with vanadium oxide supplies in order to allow VCA to maintain its position as the largest seller of ferrovanadium and vanadium oxides in the United States. (R. 15.)

The complaint alleges that as part of this conspiracy, respondents intended to and did exclude all independent producers of ferrovanadium and vanadium oxide from the vanadium industry, and that petitioners were one of the companies so eliminated. (R. 16.)

Paragraph 30 of the Complaint specifically alleges:

> "One of the direct effects proximately caused by the monopolistic practices herein alleged, as intended by defendants, was the elimination from the industry of independent producers and distributors of ferro-vanadium and vanadium oxide. One of the companies so eliminated from the industry was Continental." (R. 16.)

The complaint detailed petitioners' attempts to distribute and arrange for the production of ferrovanadium during the period 1938 to 1945. (R. 18-20.) The complaint alleges that, as a result of respondents' conspiracy, petitioners were eliminated from the vanadium industry. (R. 23.)

The acts and practices leading to the restraint upon the trade of petitioners and their elimination from the vanadium industry, as alleged in the complaint, may be summarized as follows:

(1) Respondents directly intended to eliminate all independent producers and distributors, including petitioners, from the vanadium industry (Complaint, Para. 30, R. 16);

(2) Respondents sold vanadium oxide between themselves, but refused to sell vanadium oxide to others, including petitioners (Complaint, Para. 28, R. 13-14);

(3) Respondents deprived vanadium oxide millers of a competitive market (Complaint, Para. 28 (a) (4), R. 14; Para. (b) (4); R. 14), interfered with petitioners' suppliers and potential suppliers (Paras. 33, 34, R. 18-19);

(4) Respondents fixed prices on vanadium ores, oxides and ferrovanadium (Complaint, Para. 28 (c), R. 15);

(5) Respondents interfered with Petitioners' Canadian business (Complaint, Paras. 36, 37, 38; R. 19-21).

---

2. THE PARTIES

A. Petitioners (Continental Ore)

Petitioners, a partnership, are the successors in interest to a family corporation known as Continental Ore Company, hereinafter referred to as Continental. The guiding light in Continental has been and still is Mr. Henry J. Leir.

Mr. Leir came to the United States in 1938 with an extensive and practical knowledge of ores, metals and

alloys, including vanadium. (R. 1032-1047.) In Europe, he had become familiar with ferrovanadium, which had a much higher vanadium content than the ferrovanadium produced in the United States by respondents. (R. 1063.) The European ferrovanadium contained from 80% to 90% vanadium as compared with 35% to 40% in respondents' product. (R. 1063.) The Europeans employed the inexpensive alumino-thermic method of conversion, while respondents converted their ferrovanadium by means of expensive electric furnaces. (R. 170-171; R. 1827-1828; R. 841-842.)

In 1938, Mr. Leir organized Continental and made his entry into the American vanadium business. He contacted the Apex Smelting Company of Chicago, Illinois, a maker of aluminum, hereinafter referred to as "Apex". (R. 1047-1051.) In 1938 he entered into an agreement with Apex whereby Apex was to build and operate a ferrovanadium plant using Mr. Leir's alumino-thermic method of conversion and produce ferrovanadium for petitioners. Under the agreement, petitioners were to procure for Apex the vanadium oxide necessary to permit Apex to manufacture the ferrovanadium and then petitioners were to sell the finished Apex ferrovanadium product as Apex's exclusive sales agents. (Pl. Ex. 117; R. 2187-2189, 1050.)

Apex commenced producing ferrovanadium under this agreement in August or September of 1940, and continued to produce ferrovanadium for petitioners until October, 1941. (R. 1062, 1124). In October, 1941, a fire suspended operations for a short time. (R. 1154.) On January 27, 1942, Apex notified Mr. Leir that Apex was terminating its contract with Continental. (Df. V's Ex. V-I-Y,

R. 2519, 1173.) Apex terminated production in July, 1942. (Pl. Ex. 122; R. 2215, 1096; See R. 2218-2220.)

Thereafter, petitioners installed a grinder and mixer in a warehouse located on Long Island, New York, and from 1942 to 1944 they attempted to distribute their product Van-Ex, a product which petitioners had developed at a lower cost and which could be used directly in the steel bath in place of ferrovanadium. (R. 840-845, 860; see Pl. Ex. 119; R. 2212, 1089, 989.)

On February 10, 1943, petitioners and the Climax Molybdenum Corporation of Langeloth, Pennsylvania, hereinafter referred to as "Climax", entered into a contract for the conversion of 20,000 pounds of vanadium oxide into ferrovanadium. (Pl. Ex. 111; R. 182-183, 1014.) Climax terminated any further arrangements when Union Carbide threatened it with commercial reprisals if it persisted in remaining in the vanadium business. (R. 829.)

In the Spring of 1944, petitioners and the Imperial Paper and Color Corporation, hereinafter referred to as "Imperial", entered into a contract whereby Imperial agreed to process ferrovanadium and vanadium oxide for petitioners and petitioners undertook to secure the necessary raw materials for Imperial and to act as sales agent for Imperial's entire output. (Pl. Ex. 110; R. 2175, 1014.) Imperial was compelled to abandon this arrangement because of its inability to secure adequate vanadium supplies. (Pl. Exs. 114, 115; R. 184, 2179; 1021, 1023.)

As part of their vanadium business, petitioners had also developed an extensive foreign business with a large Canadian steel mill, the Atlas Steels Limited, hereinafter re-

ferred to as "Atlas". In 1942, petitioners shipped Van-Ex to Atlas from their Long Island plant. (R. 802.) At the trial, petitioners offered to prove that in 1943 they were prevented from shipping their products to their Canadian customers and into the Canadian market by Electromet of Canada, Union Carbide's wholly owned Canadian subsidiary, pursuant to respondents' conspiracy to eliminate petitioners and all other competitors from the American vanadium industry. (Pl. Ex. for Id. 80-108, R. 438-466; R. 801-840; Wolf, R. 813-817; 832-834; 845-851; 1008-1012.) This evidence was totally excluded by the trial Court. (R. 801-851.)

By the end of 1945, petitioners were no longer in the vanadium industry, having lost all prior attempts at successful ventures. (R. 978-981.)

Petitioners' billings and sales are shown in Pl. Ex. 119, 120; 2212-2213; 1089, 1094. In 1941 and 1942 alone, petitioners sold over $200,000.00 in vanadium products. (R. 2212.)

Mr. Leir was exceptionally successful in many other fields of ores, alloys and minerals. (Pl. Ex. 123-126 for Id.; R. 536-541; R. 1097-1106.) The only field of endeavor in which he was not able to become established and to succeed, after a persistent effort to do so, was the vanadium business. (R. 1031-1033, 1097-1114. See Pl. Exs. 123, 124, 125 for Id.; R. 536-541; 1097, 1103, 1106.)

B. Union Carbide

Union Carbide is a New York corporation which holds ownership of corporations engaged in the manufacture, distribution and sale of ferro-alloys. (R. 153, 164-166.)

United States Vanadium Corporation (USV) is the wholly owned Union Carbide subsidiary which was engaged in the business of mining and milling vanadium ores on the Colorado Plateau. (R. 27, Pl. Ex. 6; R. 2071, 115.)

In Canada, Union Carbide wholly owned the Electro Metallurgical Company of Canada (Eletromet of Canada), a corporation organized and existing under the laws of Canada. (R. 27-28, 819-820.) Union Carbide sold vanadium products in Canada through this Canadian subsidiary.

Union Carbide or its subsidiaries were the only major domestic producers of vanadium oxide on the Colorado Plateau until about 1940. (Pl. Ex. 18; R. 134, 125; Pl. Ex. 6; R. 2069-2072, 115.)

In 1927, Union Carbide had acquired the properties of the United States Vanadium Corporation, located at Rifle, Colorado and entered the vanadium business. (Pl. Ex. 6; R. 2070, 115.) The Rifle mill was dismantled in 1932 (Id.). In 1936, USV erected an oxide mill at Uravan, Colorado (Id.). The Uravan plant was erected only after meetings with executives of VCA with respect to the possible joint operation of an oxide mill. (Pl. Ex. 52 for Id.; R. 366, 320.) In 1938, the Uravan plant was doubled *at the request of VCA*. (R. 145.) The plant was doubled specifically to supply VCA with vanadium oxide at below market prices. (Id.) In fact, VCA supplied Union Carbide with the steel necessary to increase the plant's capacity. (R. 146.) From 1942 to January, 1944, USV also operated the vanadium mill at Durango, Colorado, as agent for the Metals Reserve Company, a governmental agency which appointed USV its agent for the war time procurement of

vanadium. (Df. U's Ex. U-B; R. 2358, R. 367.) USV acquired ownership of the Durango mill from the United States Government in July, 1944, and operated it until June 2, 1948. (Pls.' Ex. 6; R. 2071, 115.) In 1942 USV erected another mill at Rifle, Colorado. (R. 2070.)

Union Carbide wholly owns the Electro Metallurgical Company (Electromet), which manufactures ferrovanadium from the vanadium oxide mined and milled by its other wholly owned subsidiary USV. (Pl. Ex. 6; R. 2071-2072; 115.) On November 30, 1948, Electromet was liquidated and its assets were transferred to Union Carbide. (Union Carbide Answer, R. 27.) Union Carbide also wholly owned the Electro Metallurgical Sales Corporation (Electromet Sales), which sold the vanadium products for Union Carbide. (Union Carbide Answer, R. 26.) Electromet Sales was merged into Union Carbide on March 14, 1949. (R. 27.)

C. Vanadium Corporation of America

Vanadium Corporation of America (VCA) is a fully integrated miner, miller of vanadium oxide and manufacturer of ferrovanadium. (VCA Answer, R. 34-41.)

From 1927 to 1940, VCA's principal source of vanadium bearing ores was a Peruvian mine where it also operated a mill. (Pl. Ex. 7; R. 2072, 116.) In 1932, VCA acquired the assets of a company called the Rare Metals Corporation for $428,000.00. (Pl. Ex. 6; R. 2069, 115.) These assets included a vanadium mill located at Naturita, Colorado. (Id. 2069-2070.) Although it actually acquired the Naturita mill in 1932, the mill was not rehabilitated until 1939 and was not put into active operation until the

middle of 1940. (Id. 2070, 1827.) From 1932 to 1940 VCA relied on its "competitor" USV for its domestic source of vanadium oxide. (Pl. Ex. 8; R. 117, 2074; Pl. Exs. 43, 44, 45; R. 158, 2122, 2145; 279, 281, 283.)

From September, 1942, until February 29, 1944, VCA operated a mill located at Monticello, Utah, for the Defense Plant corporation. This Monticello Plant was erected and planned by VCA officials at government expense. (R. 1836.) VCA leased the plant during 1945 and the spring of 1946. (Pl. Ex. 7; R. 2072, 116.) In 1948, VCA acquired the Durango mill. (R. 1827; and id.)

---

3. MONOPOLY CONTROL OF THE VANADIUM INDUSTRY

At all times mentioned herein, the business of milling, manufacturing and selling vanadium products was completely monopolized, controlled and dominated by respondents, the Union Carbide and Carbon Corporation (hereinafter called Union Carbide), its divisions or subsidiaries, and the Vanadium Corporation of America (hereinafter called VCA). As has been indicated, the Union Carbide divisions or subsidiaries involved in this case were the United States Vanadium Corporation (herein called USV); Electro Metallurgical Company (herein called Electromet); Electro Metallurgical Sales Corporation (herein called Electromet Sales); Electro Metallurgical Company of Canada, Ltd. (herein called Electromet of Canada). All the above mentioned companies except VCA are either divisions or wholly owned subsidiaries of Union Carbide. VCA is an independent corporation.

A. Ferrovanadium

Except for the competition offered by petitioners during their existence, at all times herein pertinent, VCA and Union Carbide *admittedly* maintained a 100% control over the manufacture and sale of ferrovanadium. (R. 1402-1403; 1843-1845; Pl. Ex. 138; R. 1256.) Petitioners were the only competition to respondents in the sale of ferrovanadium for a short period, when they were eliminated as competitors. (Pl. Ex. 119; 120; R. 2212-2213; 1089-1094.) Although during the period from 1938 to 1945 Union Carbide produced approximately 77% of the domestic vanadium oxide from which ferrovanadium is produced (Pl. Ex. 1; R. 1-6, 113; Pl. Ex. 136-137; R. 1253, 1255), it was its principal "competitor" VCA which sold approximately two-thirds of the finished product, ferrovanadium (Pl. Ex. 1; R. 6, 113; Pl. Ex. 3; R. 11-14; 115; Pl. Ex. 138, R. 1256).

Prices for ferrovanadium, the finished product, have always been uniform for each company. From 1938 to 1947 they were $2.70, $2.80 and $2.90. (Pl. Ex. 4, 5; R. 23-48, 114.) Thereafter there were uniform increases.

B. Vanadium Oxide

At all times herein pertinent, respondents controlled over 90% of the vanadium oxide produced in the United States. (Pl. Ex. 138; R. 1256, 1844-45 (1938-1947).) Respondents' mills on the Colorado Plateau accounted for over 90% of the domestic production of vanadium oxide. (Pl. Ex. 136-137; R. 1253 (1938-1945).) USV, a Union Carbide subsidiary, alone produced and sold more than 77.2% of the vanadium oxide manufactured and sold in

the United States. (Pl. Ex. 136-137, R. 1253 (1938-1945); 1844-1845; Pl. Ex. 18; R. 134, 125.) At various times, independent oxide mills attempted to start independent vanadium operations on the Colorado Plateau in competition to respondents, but, as will be shown below, they were deliberately and systematically eliminated by respondents, so that by 1944 respondents were the *only* producers of vanadium oxide on the Colorado Plateau. (Pl. Ex. 18; Id. R. 896-897.) At the trial, petitioners produced substantial evidence, including a confession by the Chief Executive Officer of USV, Mr. Blair Burwell,[3] that these independent mills were unable to operate because respondents, as part of their conspiracy to monopolize the entire vanadium industry, deliberately eliminated them as competitive vanadium oxide millers or producers. (R. 209.) The evidence in this regard showed that respondents' conspiracy to monopolize was so thorough that even the production of those independent mills which produced vanadium oxide

---

[3]Without any doubt, Blair Burwell was the most informed man on vanadium and uranium on the Colorado Plateau. He was Union Carbide's principal managing agent on the Colorado Plateau. There are few transactions mentioned in the Record in which he was not the prime actor and controlling influence. He was vice-president of Union Carbide's subsidiary, USV; a Director of USV; Assistant to the Vice-President in Charge of USV's mining operations; an Engineer whose specialty was radium, vanadium and uranium; a Consultant for the Atomic Energy Commission; the Appraiser for the United States on the Colorado Plateau for the valuation of vanadium lands; Vice-President of Union Mines Development Corp. He conducted special studies, surveys and appraisals of mineral resources in the United States for Union Carbide. He was a Director of the Metal Mining Fund of the State of Colorado; a writer of technical texts on mining, Chairman of the Board of Minerals Engineering Co., a Director of the Climax Uranium Company. He has been actively engaged in mining on the Colorado Plateau since 1919. (R. 135-144.) In addition he has extensive experience in uranium. (R. 136-142.)

only as a by-product was purchased by Union Carbide specifically "to keep it off the market". (R. 178.)

Domestic prices for vanadium oxide by each company uniformly were $1.10 per pound of V_2O_5 until 1947. After 1947 prices were uniformly increased by respondents. (Pl. Ex. 4; R. 21-26, 114; Pl. Ex. 5; R. 33-48, 115.)

C. Vanadium Ore

By 1940, USV alone held more than a 90% control of all easily accessible ore bodies on the Colorado Plateau. (Pl. Ex. 18, R. 134, Col. 17; R. 160-161; 506.) Ore prices paid to miners were identical for both respondents. (R. 211-218; 496-500.) Both respondents adopted an identical price based on 2% vanadium content. (R. 497.) During the period from October 1938 to June 1942 the price paid to miners for their ore was 21 cents a pound for 2% ore. (R. 211-218; 496-500.) After June, 1942, both respondents paid the miners 31 cents a pound for 2% ore. (R. 218, 498-499.)

The independent miners, because of respondents' conspiracy, had no dependable alternative markets for the sale of their ore and were required to sell it to respondents at the prices set by respondents, both of whom had fixed identical prices for the ore. (R. 211-218; 496-500.) The few oxide mills that were started to give the miners a possible competitive outlet were deliberately eliminated from competition by respondents, as will be shown in detail hereinafter. And when the opportunity arose for the independent miners to acquire government mills after the war, these were also acquired by respondents, even though they had no need for additional mills at the time.

(Pl. Ex. 37; R. 152, 243; Pl. Ex. 38; R. 2117-2120; 244; Pl. Ex. 6, R. 2070, 115.)

---

4. THE EVIDENCE PRESENTED AT THE TRIAL

Initially, petitioners will discuss respondents' overall conspiracy and monopolization of the vanadium industry, and, subsequently, the effect that this conspiracy had on petitioners.

A. There was direct evidence, including a confession by one of respondents' Chief Executive Officers, that respondents had agreed to monopolize, to fix prices and to restrain trade in the vanadium industry

All during the period of time that petitioners attempted to enter the vanadium business, respondents were engaged in an *admitted* conspiracy to monopolize the industry, to fix prices in the industry and to eliminate all independent competition.

The agreement between respondents started prior to 1938, when Union Carbide and VCA entered into an agreement whereby VCA was to be established as a competitor of Electromet in the ferrochrome business to forestall possible antitrust action which might come up if Electromet were the only producer of ferrochrome. (R. 193-197; 255-268.) In return for being set up as a controlled competitor in ferrochrome, VCA was to be allowed to dominate the vanadium business, maintain its vanadium markets and set the price for vanadium without price cutting or competition by the Union Carbide group of companies or any other competitor. (R. 193-197; 255-268.)

Mr. Burwell testified:

> "Anyway, Mr. Sneath said that the company was set up, Vanadium Corporation, to sell low-carbon ferrochrome, and in turn for which Carbide, they had agreed—he had agreed that the Union Carbide—Electro Metallurgical Company would not compete in the vanadium field in the alloys, would let the Vanadium Corporation of America set the price and be the leader on the market." (R. 262.)

Mr. Burwell testified that there was an agreement between Union Carbide and VCA to maintain the price of ferrovanadium and vanadium oxide which prevented Union Carbide from cutting the price of ferrovanadium so as to make it competitive with other alloys. He testified that Union Carbide did not adopt a competitive price for ferrovanadium and vanadium oxide but maintained artificial and fixed high prices because if Union Carbide lowered its prices to competitive prices, VCA would have been eliminated from the vanadium business and this would have violated the conspiratorial agreement between respondents whereby VCA would be allowed to remain in the vanadium business as a controlled competitor and respondents would monopolize the vanadium industry. (R. 151-152; 156-157; 191-197.)[4]

---

[4]Mr. Burwell testified:

"And we were well aware at that time we were restricted in our sales in this country . . . As the producer and executive in charge of producing materials from the time it was part of my duties, your Honor, to know what the marketing conditions were and where it went and under what condition, what setup, and over the period of time prior to 1938 . . . I, to my satisfaction, to the best of my knowledge, knew that there was an agreement between the Vanadium Corporation of America and the United States Electro Metallurgical Company which restricted . . ." (Burwell R. 151-152) . . . "We couldn't sell it, your Honor, because we

In 1938, since VCA did not take all the increased production of USV's Uravan plant, which had been doubled at VCA's request (R. 145), Mr. Burwell, USV's chief executive officer and field man, complained to Mr. Gormely of Union Carbide that, because of its high inventory, USV was faced with a shut-down of its vanadium mining operations. (R. 182.) Mr. Burwell recommended that the price of vanadium be dropped so as to make it competitive with other alloys and thereby increase its demand. (R. 182-183.) Mr. Gormely attempted to help and actually resorted to subterfuge to avoid the agreement between Union Carbide and VCA not to sell vanadium below the fixed price by attempting to sell vanadium in a disguise called

---

couldn't cut the price to a point where we could sell it in the United States . . . We couldn't cut the price because the Metallurgical Company wouldn't let us . . ." (R. 152-153) ". . . all we needed to do to unlock the door was to open our minds and our operations, was to reduce the price to make it competitive . . . we couldn't do anything . . . we couldn't because there was an agreement between these two companies, to the best of my knowledge . . . that prevented us from reducing the price of the vanadium and ferro-vanadium and we continued to sell vanadium oxide to the Vanadium Corporation of America. Instead of cutting the price on our huge output to stimulate production in Colorado" (R. 156-157). "I said, 'Why didn't we go ahead and cut the price of vanadium?' I believed that the Vanadium Corporation of America could not produce vanadium at a price of $2.25 a pound and survive. Mr. Gormely said that would put the Vanadium Corporation out of business. I said, 'All right, suppose you do put them out of business. What is the difference? We have people down here working—the survival of our business or the survival of the Vanadium Corporation business?' I said, 'Where do our loyalties lie? Why don't we put the Vanadium Corporation out of business?' That is clear words. He said 'If we put the Vanadium Corporation out of business, we would lose our control competitor in ferro-chrome.' That, your honor, is the cold words. There is nothing wrong about that." (R. 193-194.) ". . . He told me that the Vanadium Corporation of America had been established as a friendly competitor to sell low carbon ferro-chrome in the United States, and the reason for that was to forestall anti-trust action that might come up in the future. That was on the advice of their attorneys at that time." (R. 197.)

"silvaz". (R. 183.) The silvaz was sold to several customers, but VCA soon complained that "there had been a breach of their understanding" and Electromet was then "*forced* to discontinue the production of silvaz". (R. 183; 195; Pl. Ex. 68; R. 2151, 627.)

Respondents' letters and correspondence showed the most intimate collaboration between respondents. For example, on November, 1938, Electromet Sales sold VCA 130,000 pounds of vanadium oxide at 80¢ a pound, which was 30¢ below respondents' contract price of $1.10. (Pl. Ex. 10; R. 49, 118; R. 1896-1898.)

B. All during the period 1940 to 1942 when petitioners and Apex were attempting the manufacture and sale of ferrovanadium and receiving only irregular and sporadic supplies, USV and VCA, as part of the overall conspiracy to monopolize the vanadium industry, had arrangements whereby VCA was receiving oxide from USV at below market terms or by special arrangements

1. The "Maggie C" Agreement

In June 1939, an agreement called the "Maggie C" Agreement was entered into between respondents which provided that USV would mine ore from certain VCA mining claims, convert the ore to vanadium oxide for VCA at USV's Uravan plant at 65 cents a pound in 1939 and 75 cents per pound during 1940 for delivery to VCA. (Pl. Ex. 8; R. 2074, 117; Pl. Ex. 43, 44, 45; R. 158, 2122, 2125; 279, 281, 283.) This price was 45 cents below the market price of oxide. Under the "Maggie C" agreement, during 1939 and 1940, 717,848 pounds of vanadium oxide were delivered to VCA by its "competitor" USV. (Pl. Ex. 8, R. 2074; Pl. Ex. 150; R. 2340, 1583.) And during this time VCA executives were given access to USV's

records of production, tons of ore mined, grades, costs, etc. (R. 276-289.)

And after all available ore had been mined out of the "Maggie C" claims, VCA was allowed to continue to draw on USV oxide in excess of the amounts of ore being produced from the "Maggie C". (R. 276-289.) VCA was permitted to overdraw its account by 300,000 lbs. of oxide before the vanadium was even produced. (R. 283-240, 1957.)

2. The Dry Valley Agreement

On September 26, 1941, VCA and USV got together on still another agreement, the "Dry Valley Agreement". (Pl. Ex. 46; R. 2126, 294.) Under this agreement, USV was permitted to enter certain Dry Valley claims which USV had turned over to VCA and to mine the additional 300,000 lbs. of ore which VCA had overdrawn. (Id.) This arrangement continued to 1942. (Pl. Ex. 150; R. 2340, 1583.) The Dry Valley properties originally were owned by Molybdenum Corporation of America. (R. 285.) The properties were subsequently offered for sale. VCA was interested in acquiring the properties, as was USV. USV bought the properties. Mr. Van Fleet outbid VCA and acquired the claims. When Mr. Bransome (VCA) heard of this, he complained to Mr. Haggerson, president of Electromet and a vice-president of Union Carbide, that Mr. Van Fleet eavesdropped on a conversation and discovered VCA's bidding price. (R. 287.) He asked USV to turn these claims over to VCA. (R. 288.) Mr. Haggerson ordered Burwell and Van Fleet to return the claims to VCA against their business judgment. (R. 288.) Almost immediately Mr. Bransome entered the Dry Valley agree-

ment with USV to repay the overdraft by allowing USV to mine the claims. (R. 284-290.)

3. Respondents Fixed Prices

During the period 1933-1939, USV sold to its only competitor, VCA, 20% of the latter's oxide requirements. (Compare Pl. Ex. 3; R. 14, with Pl. Ex. 8; R. 2074.) And almost unbelievably, although during this period VCA was purchasing 20% of its raw materials (oxide) from USV, VCA sold two thirds of the market as to the finished product (ferrovanadium). (Pl. Ex. 3; R. 11-13, 113.)

In 1939, Van Fleet and Burwell again requested the Union Carbide group to lower the price of ferrovanadium to one in "reasonable relationship to our costs" and thereby increase its demands. (R. 147-149.) In spite of high inventories which threatened to close down USV's mining operations on the Plateau the price was not lowered. (R. 147.) Instead, Mr. Sneath, the European representative of Union Carbide, arranged for the sale of one million pounds of oxide in Europe through a European cartel headed by Sir Edwin Davies. (R. 148-151.) The oxide was sold in Germany and not in this country at a reduced price because there was an agreement between Vanadium Corporation of America and the Electro Metallurgical Company restricting the sales in this country (R. 150-153), and preventing Electromet from cutting the price so as to sell the surplus oxide.

In 1940, because of the increasing war demand, it was decided that VCA would open its Naturita plant, which VCA had allowed to remain dormant while it purchased oxide from its competitor USV.

Prior to the opening of this plant, Burwell of USV, Van Fleet of USV and Bransome of VCA met at Mr. Bransome's private Club in New York "in or about 1939". (R. 211.)[5] At this meeting the two "competitors" discussed labor rates, ore costs, trucking rates, production costs and the most intimate corporate secrets. (R. 214-215.) At that meeting it was agreed that both companies would pay 21 cents per pound of vanadium content in the ore, 2% being the basing point. (R. 214-216.) Mr. Bransome (VCA) told Mr. Burwell (USV) "All right we will work with you and we will follow the general or pricing schedule that you have". (R. 215.)

Thereafter, until 1942, both USV and VCA in fact did pay a base price of 21 cents per pound for 2% ore. (R. 215-216.)

In the spring of 1942, Burwell, Bransome and Kett, General Manager of VCA's mining operations, and possibly Mr. Hill (USV) met at Dove Creek, Colorado. (R. 215-217.) At this meeting VCA and USV agreed to increase the base price of vanadium ore to 31¢. (R. 217-219.) After this meeting both companies commenced paying 31¢ for their ore. (R. 218.)

Mr. Burwell testified that there was an agreement between Union Carbide and VCA which required Electromet to follow VCA prices against the business judgment of officers of USV. (R. 145-152, 157, 193-194, 229-241.)[5a]

---

[5]Mr. Bransome fixed the meeting place at his private club. Mr. Burwell suggested other meeting places. But "the club was selected because it was less public". (R. 213.)

[5a]The independent miners on the Colorado Plateau subsequently filed an action under the antitrust laws in the United States District Court for the District of Utah, Central Division, claiming

Not only did USV and VCA get together and fix prices, but they set up a Kangaroo court in New York whereby they diligently policed the field to make certain that the fixed prices were maintained. Direct evidence of this type of policing was presented. For example, on November 2, 1941, S. Power Warren, USV General Superintendent at Uravan, reported to his superior, King Haldane, in New York City, that they had "plenty of evidence" that VCA was attempting to raise ore prices, but that Blair Burwell had taken a trip to Uravan and had spoken to Ralph Blitz, VCA General Superintendent at Naturita, about it and "his discussion with Blitz remedied the matter". (Pl. Ex. 35; R. 2114, 218.)[6]

And, on December 24, 1941, Haldane (USV) in New York wrote to Weston and Burwell in Colorado that Mr. Kett of VCA was protesting in New York to USV that USV was trying to take away one of VCA's miner-customers named Lyen by offering him $2.00 per ton "above the established rate". (Pl. Ex. 36; R. 151, 227.) Haldane had advised Kett that he would look into the matter. (Pl. Ex. 36.) On December 27, 1941, Weston replied to Haldane that Lyen was only a "trouble maker" and that USV had checked into the story only to find that they had furnished Lyen with the regular list price and

---

that they were injured by respondents' conspiracy to fix the prices paid them for their ore. A jury returned a verdict in their favor in that action. The jury verdict and the judgment entered therein was recently affirmed by the Tenth Circuit in *Union Carbide and Carbon Corporation v. Nisley* (10th Cir., 1961), 1962 Trade Cases, Par. 70,222, page 75,805.

[6]Mr. Burwell (USV) testified that "I asked Mr. Blitz [VCA] what he was paying for ore and he told me. I don't remember exactly what it was but it was more than 21 cents. And I asked him to check with Fred Kett [VCA] as to what the prices of ore we agreed to be". (R. 221.)

had "definitely" not offered him more than the "established rates". (Pl. Ex. 72; R. 2159, 631.)

4. Respondents Entered Into Joint Export Orders and Allocated Customers

As already indicated, respondents became particularly concerned about competitors at this time because the European rearmament program which preceded the war in 1939 was generating a new demand for ferrovanadium in Europe and shooting up the export price. (Pl. Ex. 166; R. 213, 1899.) This demand gave independent mills a market which would have permitted them to establish the nucleus of an independent operation and to threaten respondents' monopoly. On March 28, 1940, Mr. Bransome of VCA wrote to a French Company that the high export prices were making for people trying to buy domestic and sell export (Id.). Bransome wrote that they had "this phase under very good control, and if any shipments do get away" "they are very small ones" (Id.).

And pursuant to their conspiracy, respondents divided the foreign orders that did not "get away". For example, in October 1939, a large French concern ordered a shipment of ferrovanadium. (Pl. Ex. 161; R. 208, 1882.) Respondents then commenced a series of intercorporate communications which resulted in the two respondents splitting the shipment. (Pl. Ex. 161 to 166; R. 207-213, 1881-1899.)

In addition, domestic customers were allocated between respondents. For example, in 1940, Burwell, while attempting to sell available uranium concentrates to the Vitro Corporation in Pittsburgh, Pennsylvania, learned

that Vitro could use 100,000 pounds of red cake. He convinced Vitro that the red cake was better suited for their purposes than the hard fused black oxide Vitro was then using. (R. 248-253.) At this time, USV had a tremendous surplus of oxide which threatened to close its mines in the west. (R. 251.) When Burwell enthusiastically reported this prospective sale to Electromet's sales manager he was told that Vitro was a VCA customer and "VCA is selling their vanadium" and "we were not calling on VCA customers". (R. 251.)

And, again, in 1946, Burwell was told by the Sales Manager of Electromet Sales not to mention vanadium to the President of the Crucible Steel Co., because Crucible was a VCA customer and Electromet Sales personnel had been instructed by their superiors not to approach VCA customers. (R. 253-255.)

And, as part of the conspiracy, respondents rigged their bids to the government so as to insure each other a share of the business. (R. 237-240.)[7]

Also, as part of this overall conspiracy to monopolize the vanadium industry, respondents set up a deliberate plan to eliminate any independent competition to this monopoly.

---

[7]Mr. Burwell testified that in 1946, he was told that Union Carbide should allow VCA to take part of a government bid because ". . . Mr. Swain has just told me a short time ago that he had prevailed upon the Vanadium Corporation of America to increase the price of ferrochrome silicon to the point that it would not be used as a substitute for low carbon ferro-chrome, and I don't want to antagonize the VCA at this time, and therefore, I would like to have part of this business so we can continue along . . . Mr. Rafferty said 'Mr. Priestley, do I understand that you are still conniving on this business with the VCA? I thought we were all over that kind of monkey-business.'" (R. 239-240.)

C. Respondents carried out a deliberate and avowed policy to eliminate competitors during the period of petitioners' attempted entry into the vanadium industry

Commencing in 1938, the war machines of the world were beginning to prepare for World War II. This rearmament gave a new surge to the Plateau. Higher export prices stimulated entry into the vanadium business. (Pl. Ex. 166; R. 213, 1899.)

USV learned of these intentions by "outsiders", and in September, 1938, Mr. Van Fleet instructed Mr. Burwell to secure accurate and definite information on Colorado Oxide production for the purpose of a report to Union Carbide's Board of Directors. (Pl. Ex. 33; R. 144, 173.) In this request, Mr. Van Fleet wrote (Pl. Ex. 33; R. 144):

> "As I discussed with you the other night on the telephone, it has become very important that we find out accurately and definitely who is producing vanadium ore and where it is going. Along with this, we want to know the quality of the ore shipped so that we can get a line on the pounds of V_2O_5 . . . We may have to do something about this production . . . These are pretty high prices for us, but it may be necessary to finally do something about it."
>
> "I have an idea that this production of ore which is going to Europe and Japan is quite a quantity of V_2O_5 . . . I have been talking about this for some time here in New York, stating that the high prices maintained for V_2O_5 in Europe will invite and stimulate this kind of competition and can eventually support a considerable vanadium business, with possibly later on a plant."

Mr. Burwell acquired this competitive information requested by Mr. Van Fleet and made a complete report to

Mr. Van Fleet, specifically so that he could report it to the Union Carbide Board of Directors. (R. 206-208.) In his report to his superiors, on September 19, 1938, Van Fleet stated (Pl. Ex. 34; R. 146-150, 197, at 150):

> "We have already purchased two or three groups of claims which are potential producers and could be the nucleus of an operation. The intensive development during the past year has made it more imperative to continue this policy, and it now appears that we should purchase some properties and possibly install a small plant in Southeastern Utah to *forestall serious competition.* A definite recommendation will be made on this as soon as the field work has been finished." (Emphasis added.)

Mr. Burwell testified that he was subsequently instructed by his superiors to acquire all properties on the Colorado Plateau that could possibly produce vanadium in competition with USV in order "to keep them off the [American] market as producers of vanadium". (R. 209.) Seldom, if ever, has there been a confession of such flagrant violations of the antitrust laws by an executive officer of an offending corporation. Mr. Burwell testified:

> "Q. State whether or not there was, in September of 1938, a communication from any superior of yours in the United States Vanadium Corporation or Union Carbide with respect to a policy on competitive activities on the Colorado Plateau.
>
> A. Yes, there was.
>
> Q. Was this an oral or a written communication to you?
>
> A. Oral.
>
> Q. And who gave you that oral communication?
>
> A. Mr. Van Fleet.

Q. What was the policy as communicated to you?

A. Well, I was—my instructions were to acquire all the properties on the Colorado Plateau that would possibly produce vanadium in competition with the United States Vanadium Corporation.

Q. To acquire them for what reason?

A. To keep them off the market as producers of vanadium.

Q. What market?

A. The American market."

(Burwell, R. 208-209.)

Mr. Burwell dramatically explained:

". . . at that time we knew we had a billion dollar field, and we were playing the cards for a billion-dollar field. And the way you get a billion-dollar natural resource is to acquire it this way. So all may be the tooth and the fang, but this is the way mining engineers proceed—business people proceed—to acquire, control a natural resource, and this policy was directed to me by Mr. Van Fleet, and it was also directed to me previously by other corporation officials previous to 1938. This was a policy that continued from 1926 and has never been stopped." (Burwell, R. 209.)

Pursuant to his instructions, Mr. Burwell set out to accomplish the brutal and systematic elimination of any independent competition and any independent operations that could possibly nurture a competitive vanadium business at any level of the vanadium business.

Burwell gave detailed direct testimony as to the manner in which USV acquired or eliminated all independent sources of vanadium oxide to which petitioners could look or depend upon for their raw materials. The independent

sources of supply which were specifically eliminated by respondents to keep them out of the American market were:

1. Anaconda Copper Company

USV purchased its production of approximately 100,000 pounds of V_2O_5 per year. (Tr. 206-207.) Burwell testified that USV did not need this oxide at that time (September, 1938), but that USV purchased the Anaconda production only to "keep it off the market", "the American market". (R. 207.)

2. Gateway Alloys

This was a small independent mill which an individual named Brown leased from the Molybdenum Corporation of America. Mr. Burwell received specific instructions "to discourage them in any way we could". (R. 292.) Burwell offered Brown a low price for his oxide and then arranged to lease the surrounding mines from which the mill drew its raw ore. (R. 292.) The mill itself was located down in a canyon, while the mines were about 1500 to 2000 feet above it. (R. 292.) After leasing the mines Burwell stripped them of 12,000 to 15,000 tons of easily accessible and inexpensive-to-mine ore. (R. 292.) These mines were unnecessarily and brutally stripped of the easily accessible ore by USV because "we wanted to keep another vanadium operation from getting started". (R. 292-293.) At this time USV had more than sufficient ore at its Uravan mill area and did not need the Gateway ore. (R. 292-293.) Yet USV hauled the Gateway ore approximately 45 to 65 miles over rough roads from Gateway to Uravan to keep it away from the Gateway mill. (R. 292-293.) The reason for this costly haul was that USV

"wanted to keep another vanadium operation from getting started." (R. 293.)

In regard to this Gateway area, Burwell clearly explained how he utilized his exceptional skill as a mining engineer to eliminate the Gateway mill as a competitive operation both then and in the future. (R. 350-352.) He testified that he simply removed the *easily accessible surface* ore that could be used to support a low cost operation and "implement a small plant". (R. 350-351.) He explained very dramatically that by removing this low cost easily accessible ore only the deeper ore would remain. Burwell, as a mining engineer of great ability and experience, knew and he testified that the means of controlling the "whole thing" or the entire Gateway "district" and any future operation was to remove the surface ores which could permit a small plant to get a successful operation going with a small inexpensive "pot-sized plant" and then utilize its profits from this small inexpensive operation to expand its plant and operation into a larger plant which could then economically take advantage of the deeper ores. (R. 350-352.)

To doubly insure the failure of the Gateway mill, which another ill-fated independent miller by the name of Nisley later acquired, Burwell built a road which led from the Gateway tributary claims in a direction away from the Gateway mill and not to the mill. (R. 351-353.)[8]

The mill went broke in 1940. (R. 293.)

---

[8]". . . So all we did to help Mr. Brown out and offer to take care of the situation in controlling the district, which were my instructions and which I carried out, was to take all of the surface ore that was available that could be economically taken down to the

3. Mesa Vanadium Mill

The entire mill was acquired by USV "to keep it out of production". (R. 303.) USV did not need a mill at this time. (R. 303.)

4. Loma Mill

Prior to the time this independent mill was opened, USV was not purchasing ore in any areas close to the Loma Mill. (R. 304.) After the mill was opened as an independent mill, USV started an ore buying station near the mill specifically to keep the ore "away from this mill". (R. 303-306.) This ore was hauled a distance of 150 miles to keep it away from the Loma Mill. (R. 306.) In spite of this additional hauling cost, USV paid no more for the ore around the Loma Mill than it did for its ore at Uravan which was only a 7 to 8 mile haul. (R. 306.) The Loma Mill "closed down for lack of ore". (R. 306.)

5. Mammoth St. Anthony Mining Company

In 1938, USV had "too much vanadium" and Burwell feared he would have to shutdown and lay off its own employees. (R. 178.) Yet USV attempted to buy the Arizona production of this mine. (R. 178.) Burwell testified that they purchased this production to "keep it off the market, the vanadium market" in the United States. (R. 178.)

Gateway plant, and to do that . . . we built the road, not down to Gateway; we built a road up the other side, that went down to Mesa Creek, with bull-dozers and graders which was of no use to the Gateway plant, but over that road we cleaned up all the surface available ores on the claims that bordered the top of the mesa, so when we were through we had all the available cheap ore that could possibly be used to implement a small plant." (R. 351-352.)

Mammoth's mines closed on May 15, 1939. (Pl. Ex. 18; R. 134, 125.)

6. Blanding Mines

USV originally negotiated to acquire Blanding Mines. (R. 179-180.) However, VCA eventually entered the scene. (Pl. Ex. 160; R. 2355-2356, 1849.) Blanding Mines had supplied oxide to petitioners in 1940 and 1941. (Pl. Ex. 118; R. 1065, 2205-2206, 2209.) Mr. Leir's manufacturing associate, Apex, was subsequently informed on January 9, 1942, that Blanding could no longer furnish Apex with a supply of oxide. (Pl. Ex. 131; R. 2229, 1242.) This was on the advice and recommendation of Mr. Garbutt, the owner of Blanding. (R. 1695, 1706-1712.) VCA had started to negotiate for the acquisition of the Blanding properties in the Fall of 1941. (R. 1750.) VCA subsequently acquired the bulk of Mr. Garbutt's properties and leased the property to Blanding Mines. (Pl. Ex. 157; R. 2341, 1791.) VCA subsequently received all Blanding's production. (R. 1758-1767.) A fire occurred in June, 1942 and the Blanding mill was not reopened until March, 1943. (R. 177.) The plant was reopened by Defense Plant funds. In 1944, it was turned over to the government. (R. 1729.)

7. North Continent Mill

North Continent was turned into an ore selling operation in the Spring of 1943, and ceased to mill vanadium oxide. (Pl. Ex. 18; R. 134, 125.) The payments for the ore came from USV, as agents for MRC. (Df. U.'s Ex. U-3-R; R. 565, 914; Df. U.'s Ex. U-3-T; R. 566, 918.)

8. The Durango Mill

This mill was acquired by USV in 1944 because "we wanted to keep control of the production of vanadium" (R. 246) and because some independents were trying to buy it. (R. 242.) USV feared that these independent producers would use this mill to start an independent production of oxide in competition with USV. (Pl. Ex. 38; R. 2117, 244.)

The plant was acquired by USV on July 31, 1944 at a cost of $75,000. (Pl. Ex. 6; R. 2069, 115; Pl. Ex. 38, R. 2117, 244.)

9. Nisley & Wilson Mill

Mr. Nisley, one of the owners of this mill, testified that Burwell actually diverted miners from his scales and offered them premium prices to haul their ore a greater distance to USV's mill at Uravan. (R. 655-656.) The mill closed. (R. 658-663.)

This mill was the same mill which Mr. Brown had tried to operate in the Gateway District and whose tributary ore bodies had been unnecessarily stripped by Burwell to "keep another vanadium operation from getting started." (R. 292-293; 351-352.)[9]

---

[9]Nisley & Wilson subsequently filed an action under the antitrust laws in the United States District Court for the District of Utah, Central Division, claiming that they were excluded from the vanadium industry by this same conspiracy and as a result of respondents' activities which are set forth in this brief. A jury returned a verdict in favor of Nisley & Wilson in this action and found that he was excluded by respondents' conspiracy to monopolize and to exclude him as a competitor. The jury verdict, and the judgment entered thereon, was recently affirmed by the Tenth Circuit in the case of *Union Carbide and Carbon Corp. v. Nisley* (10 Cir., 1961), 1962 Trade Cases, Par. 70,222, page 75,805.

After Nisley and Wilson were caused to close their mill, they sought to return to operation by seeking MRC aid, whereupon they were referred to Burwell, USV agent for MRC, who told him that the only condition under which Nisley would be supplied ore purchased by USV for the government account was that the oxide produced from the ore be returned to USV. (R. 660-663.) USV, as agent for MRC, subsequently terminated its contract with Nisley sooner than it terminated its contract with VCA. (R. 666.)

Mr. Burwell's testimony on the policy of excluding all existing and potential competition to Union Carbide and VCA was corroborated by the contemporaneous documents. (Pl. Ex. 33; R. 144, 173; Pl. Ex. 34, R. 146, 197; Pl. Ex. 35; R. 2114, 218; Pl. Ex. 36, 151, 227; Pl. Ex. 37, 152, 243; Pl. Ex. 64; R. 2147, 591.)

VCA knew of USV's plans (Pl. Ex. 55; R. 2133, 324) and carried on their own preemptive acquisitions. (Pl. Ex. 39; R. 2121, 247.)

D. Petitioners' attempts at entry into the vanadium industry

1. There Was an Admitted Policy by Respondents to Exclude Petitioners

Mr. Burwell, in testifying on Union Carbide's refusal to supply petitioners with vanadium oxide in November, 1943, stated that the **ONLY** reason petitioners could not obtain vanadium oxide from Union Carbide was that Union Carbide, pursuant to its conspiracy with VCA, wanted petitioners out of the vanadium business. He testified:

> "Q. (By Mr. Alioto.) Did you know at that time that Mr. Leir, or the Continental Ore Company, were

trying to buy—was trying to buy vanadium oxide from your company?

A. Oh, yes, I heard that at that time.

Q. Do you know why they would not sell it to them?

A. Well, I heard exactly that they did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business. *No other reason.*" (R. 547; emphasis added.)

Mr. Burwell further testified that it was the corporate policy of Union Carbide to keep Mr. Leir out of the vanadium business:

"Q. Now, you testified, did you not, that you had heard that Union [Carbide] did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business?

A. That's right.

Q. Now, who told you this, Mr. Burwell?

A. Oh, I heard that from Mr. Van Fleet, I heard that from—I heard that in a dozen conferences. I don't recall exactly which one—in the building, 30 East 42nd Street, New York City.

Q. Sort of a rumor?

A. It was my business to be in those meetings. They weren't formal meetings. I heard it from Mr. Van Fleet, I heard the reference to Mr. Leir—I had never met Mr. Leir—I knew nothing of his business excepting it came up second-handed—I heard from Mr. Jacobi.

Q. (By the Court.) Did any of these corporations, now, that you were connected with, make an order, a formal order on policy to that effect, that you know of?

A. No, your Honor. No smart lawyer would let a corporation make a formal order in writing of that

kind of thing. One of our instructions was never to write anything down like that." (R. 611.)

Mr. Burwell further testified that when he proposed a plan for the recovery of uranium, which is found in the same ore which produces vanadium, as the primary metal from the ore, in order to lower costs and stimulate the production of uranium on the Colorado Plateau, that Mr. Bransome told him that his plan would have to be rejected because it would allow vanadium as a by-product to be available in abundance on the free market and thus allow independent competition in vanadium. (R. 222-226.)

Mr. Burwell testified:

"... Mr. Bransome said, 'Blair, supposing—' '... these independent producers of ore had vanadium and uranium ore and brought their ore up to this central plant that you propose. The vanadium then would be turned back to them to sell or to dispose of, isn't that correct?' I said, 'Yes, that's correct.' I said, 'We cannot in this particular emergency deny any person the right to get vanadium back; that this situation had now become bigger than either the Unioin Carbide or the Vanadium Corporation of America in my estimation.'

Then he asked this: 'What would happen if somebody like Continental Ore or Mr. Leir shipped some ore to this central plant? Would he get the vanadium back?'

I said: 'Surely, he would.'

'So would anybody else who owned the ore. They would all have to have the same right.'

Mr. Bransome said, he paced back and forth in his office, he said, '*That would put Mr. Leir in the vanadium business and that is what we are trying to keep him out of.*'

> And I looked at Ted and I turned around and walked out of the door. And that was the end of the conversation.
>
> The plan was never put into effect." (R. 225-226; emphasis added.)

Shortly after this conversation, Mr. Burwell recounted the conversation in a memorandum dated January 22, 1948, to Mr. H. D. Kaiser of the Atomic Energy Commission. (Pl. Ex. 58; R. 2141, 531.)

There also was direct evidence from VCA's own files that it intended to exclude petitioners from the vanadium business, and that it entertained commercial arrangements with Apex to achieve the desired objective at a time when Apex was operating under its contract with petitioners. This will be discussed further below. (Pl. Ex. 62; R. 163-169, 584.)

2. There Was Direct and Circumstantial Evidence That Respondents Prevented Petitioners From Obtaining a Steady, Dependable Supply of Vanadium Oxide, Interfered With Petitioners' Relations With Their Oxide Suppliers, Interfered With Petitioners' Manufacturing Associates and Caused Petitioners' Elimination From the Canadian as Well as the Domestic Vanadium Market

a. Period of Apex Contract (1938-1942)

The contract between Apex and petitioners was dated July 1, 1938. (Pl. Ex. 117; R. 2190, 1050.) It was to remain in force for a period of fourteen years. (Id.) Production under this agreement was not actually begun until approximately August, 1940. (R. 1062.) Although respondents were supporting each other on prices and vanadium oxide supplies under the Maggie C and Dry Valley Agreements, the record showed a concerted refusal to sell

vanadium oxide to petitioners or to Apex during this critical period of first entry.

(1) Refusal of Respondents to Sell Oxide to Petitioners

Petitioners' requests for oxide supplies from VCA in 1939 were rejected. (Pl. Ex. 132; R. 2252-2260, 1245.) Some vanadium oxide supplies were surreptitiously received indirectly from Electromet Sales through a Mr. Poliakoff for a short time. (R. 1228; Df. U's Ex. U-5-L; R. 588, 1228.) Mr. Leir could not get this material directly. (R. 1228.)[10]

The estimated capacity of Apex's ferrovanadium production was approximately 416,000 pounds a year or between 30,000 to 40,000 pounds per month. (Pl. Ex. 146; R. 2270 at 2272; 1320; Wolf, R. 856; Leir, R. 1113. See also Pl. Ex. 140 for Id., R. 544, 1262.)

On March 1, 1940, Apex requested prices on quantity lots of vanadium pentoxide from VCA. (Pl. Ex. 63; R. 170, 778.) No reply was received. (Id.)

On April 8, 1940, Apex requested a response. (Id.) VCA responded to Apex that they had "no material to offer". (Id. at R. 171.) In October, 1940, in reply to an obvious request, Electromet Sales informed Apex that it could not supply Apex with oxide. (Pl. Ex. 128; R. 189-190, 1239.) Yet, at this very time, USV was supplying VCA with toll milled vanadium oxide at a below cost 75¢ a pound. (Pl. Ex. 8; R. 2074, 117.)

---

[10]The third page of Exhibit U-5-L shows specifically that the sales were *not* between Electromet Sales and petitioners, but between Electromet Sales and Poliakoff. (Df. U-5-L; R. 588, 1228.) Mr. Leir testified that he could *not* get this material directly. (R. 1228.)

Thus, during that period, Apex's production did not include a single pound from respondents, who held over 90% control of the sources of supply.

The sporadic supplies petitioners were able to acquire were totally inadequate for Apex's continued production of ferrovanadium. (Pl. Ex. 144; R. 2266, 1313; Pl. Ex. 145; R. 194, 1315; Pl. Ex. 146; R. 2270, 1320; D's V's Ex. V-1-Q, R. 2512A, 1145.) Just prior to Apex's notification to Continental on January 27, 1942 (Df. V's Ex. V-1-Y; R. 2519, 1173) and on February 13, 1942 (Df. V's Ex. V-1-Z; R. 602, 1174) of Apex's desire to terminate production, Apex was in short supply of vanadium oxide. In fact, petitioners supply situation was so drastic that they were requesting the intervention of the government in order to obtain oxide from respondents. (Pl. Ex. 144, 145, 146, supra.)

On June 14, 1941, petitioners wrote to Electromet for supplies of vanadium oxide for shipment to Apex. (Pl. Ex. 77; R. 176, 776.) No response was received (Id.). On June 16, 1941, Mr. Leir requested of Electromet that Apex be allowed to convert vanadic acid for the account of Electromet (Id.). This offer was rejected (Id.). On June 16, 1941, Mr. Leir sent a similar request to VCA. (Pl. Ex. 132; R. 2261-2263, 1245.) VCA did not even bother to reply.

On July 7, 1941, petitioners requested that the Office of Production Management intervene in their behalf to secure oxide for them from respondents. (Id. at R. 2265.) Both respondents declined to supply petitioners (Id.).

As a result, in September, 1941, Apex wrote to Mr. Leir that it could not expand its production because of the deficiencies in its sources of supply. Apex wrote:

". . . for as you know we are not getting a sufficient quantity to run our present facilities on half time." (Df. V's Ex. V-1-Q, R. 2512A.)

There can be little question that petitioners were finding it impossible to secure adequate supplies to permit production under its Apex agreement.

From October to December, 1941, petitioners frantically attempted to obtain oxide. Having been turned down by respondents, petitioners centered their attention on obtaining acid from the Defense Plant Corporation Monticello Plant, which was under the administration of VCA. (Pl. Ex. 144; R. 2266-2270.)

On December 13, 1941, approximately one month before Apex notified petitioners of their intention to cancel their arrangement, Apex wrote the Defense Plant Corporation requesting a share of the Monticello oxide production.

Apex stated:

". . . However, we cannot make use of all of our production facilities *due to the lack of raw material* which is fused vanadium pentoxide, and therefore, we would appreciate greatly if you would make it possible for us to secure from the new plant reasonable tonnage of the Vanadium Pentoxide for conversion to Ferro Vanadium." (Pl. Ex. 144; R. 2266.) (Emphasis added.)

And again on December 26, 1941, Apex informed the Vanadium Division of the Office of Production Management:

". . . Our capacity for the production of this material is about 50,000 to 60,000 # of V contained per month but at the present time we are producing only a frac-

tion of this capacity *due to lack of raw material.*" (Pl. Ex. 146; R. 2271-2272.) (Emphasis added.)

These requests were made by Apex at the urging and insistence of Mr. Leir. (Id. R. 2273-2275.) And Mr. Leir himself testified:

"Q. (By Mr. Alioto.) Mr. Leir, in any event, were you having difficulty getting enough of the raw material to supply the Apex contract at this time?

A. My difficulties, or Apex difficulties, if you want to put it this way, to obtain a regular source of supply for raw material had already started, yes.

Q. Were you ever able under the Apex contract up to the time of its termination to get a regular dependable source of vanadium oxide?

A. I was not.

Q. What reasons were assigned by Apex for wanting to get out of the contract?

A. One of the reasons was the inability to obtain such a regular supply." (R. 1079.)

An officer of Apex Smelting, Mr. William R. Bayer, brought to the trial by respondents, admitted that "we just couldn't go out and get the supply" (R. 1301) and that Apex was not operating at full capacity because of the lack of raw materials. (R. 1319.)

Mr. Bransome, President of VCA, as late as June, 1941, foresaw no *shortage* of vanadium. (R. 1072-1079.) Yet during this period petitioners were refused oxide supplies by both respondents and their manufacturing associate, Apex, was experiencing difficulty in obtaining supplies.

(2) Respondents Interfered With the Independent Oxide Suppliers Who Were Petitioners' Source of Supplies

During the Apex period, petitioners' or Apex's vanadium oxide suppliers were: Mr. Ackermann (The Loma Mill), Blanding, Monticello, Mr. Wm. G. Morrison (original operator of The Loma Mill) Nisley & Wilson, and Shattuck (North Continent Mines). (Pl. Ex. 118; R. 2202, 1295, 1065.) These were all independent suppliers. The respondents interfered with these suppliers during the Apex period, with the possible exception of North Continent who shipped approximately 5 tons a month, as contrasted to the capacity of Apex, which was estimated to be between 25 to 30 tons of V per month. (Pl. Ex. 146; R. 2272.)

(a) Loma Mill:

Mr. Burwell described the predatory acts committed by USV against this mill to keep the ore "away from this mill" and eliminating this supplier from the market. (R. 303-306; See this brief page 33.) This mill "closed down for lack of ore" (R. 306) as a result of these tactics.

(b) The Blanding Mines Production:

As was heretofore shown VCA usurped the Blanding Mine Production from Apex and petitioners by direct interference with this source of supply. (See this Brief page 34.) The Blanding Mill had been supplying Apex with vanadium oxide shipments from August, 1940, to January, 1941. (Pl. Ex. 118; R. 2209, 1065; Pl. Ex. 131; R. 2229-2233, 1242.) The relationship between Blanding and Apex was satisfactory. (R. 1746.) In the Fall of 1941, VCA negotiated the acquisition of the vanadium ore

claims of Blanding's lessor, Garbutt. (R. 1950; R. 1750.) Mr. Bransome, President of VCA, went to Los Angeles where he sought out Mr. Garbutt and personally acquired the claims on or about January, 1942. (R. 1949-1950.) It is significant here that Blanding notified Apex that it would no longer sell oxide to Apex on January 9, 1942, less than 20 days before Apex capitulated and notified petitioners that Apex desired to terminate the agreement. (Pl. Ex. 131; R. 2239, 1242; see Pl. Ex. 127; R. 2222, 1239.)

Blanding wired Apex on January 9, 1942:

> "At the advice and recommendation of the owner of our claims, it will be necessary for us to dispose of our product here. We regret very much that we will be unable to deal with you." (Pl. Ex. 131; R. 2239.)

On January 12, 1942, Apex replied:

> "We regret exceedingly to note that you are compelled to dispose of your material in your district, as we enjoyed doing business with you, and *we were looking forward to receiving increasing amounts from you.*" (Id.) (Emphasis added.)

Petitioners desperately pleaded with Blanding for its production. (Pl. Ex. 131; R. 2239-2251.) However, VCA obtained Blanding's oxide production for the price of $1.10 per pound, f.o.b. mill. (R. 1759.) Higher prices offered by petitioners were turned down by Blanding, which was, by that time, under the control of VCA. (Pl. Ex. 157; R. 2341, 1791; R. 1738-1740, 1758-1759.) On March 28, 1942, petitioners offered Blanding $1.20 per pound, 10¢ per pound more than VCA. (Pl. Ex. 131; R. 2246.) Mr. Leir pleaded with Blanding that "you must help us stay in business now, for your sake as well as ours". (Pl. Ex.

136; R. 2244, 1253.) Nevertheless the Blanding production went to VCA.

(c) The Nisley and Wilson Mill:

Mr. Brown's defunct Gateway Mill was acquired by Nisley and Wilson in the Spring of 1941. This was the mill Mr. Burwell had been instructed "to discourage" in "any way we could". (R. 292.) The mill had gone broke in 1940 because of respondents' activities. (See this Brief page 31.) Nisley and Wilson first attempted operations in May, 1941. (R. 646.) Their operation was thwarted by Mr. Burwell who subjected Mr. Nisley's red cake to short weight. (R. 651.) Mr. Nisley then contacted Continental, and commenced production of black oxide in or about October, 1941. (R. 652.) Nisley started shipping 2 or 3 tons a month to Apex. (R. 2209, 693-694.) The stripping of the mines at Gateway, which Mr. Burwell had accomplished "to keep *another vanadium's operation* from getting started" (R. 292-293) and the winter months caused Nisley trouble and his mill experienced intermittent operations from October, 1941 to March 20, 1942. (R. 654.) The mill closed March 20, 1942 for a short period and then reopened in May, 1942. But in June, 1942, just one month after the mill reopened, Mr. Burwell started to divert the miners who were supplying ore to Nisley to Uravan. Mr. Nisley closed down in October, 1942 and remained closed to April, 1943. (R. 657, 662-663.)

(d) Monticello:

These supplies were limited. They consisted of only four shipments from April to September, 1941. (R. 2206.)

(3) Respondents Interfered With Apex Who Cancelled Its Contract With Continental and Agreed With VCA Never to Enter the Vanadium Industry Again

Petitioners' unsuccessful attempts to secure oxide supplies from respondents from 1938 to 1942 have been described hereinabove. (This Brief, pages 40-43.) On January 27, 1942, Apex notified petitioners that it was discontinuing its relations with them. (Df. V's Ex. V-1-Y; R. 2519, 1173.)

However, on February 16, 1942, petitioners had received assurances of governmental cooperation in obtaining additional supplies of vanadic acid and attempted to convince Apex to remain in ferrovanadium production. (Df. V's Ex. V-2-A; R. 603, 1173.) But only four days after this letter was written, VCA held a meeting with Apex which resulted in direct commercial arrangements between Apex and VCA. An agreement was made between Apex and VCA whereby Apex agreed to stay out of the vanadium business, and furnish VCA with Continental's list of suppliers and, in return, VCA would purchase 150,000 to 200,00 pounds of dioxidizing aluminum ingots from Apex over a period of six or seven months for $10,250-$27,000. (Pl. Ex. 62; R. 163-169; R. 1335-1337, 1947-1949.)

This evidence showed that VCA had been in contact with Apex on or about February 20, 1942. (Id.) These negotiations were discontinued. (Id.) However, VCA voluntarily resumed contact with Apex on or about March, 1942. (Id. at R. 167.)

A VCA interoffice memorandum stated:

> ". . . as I had not heard further from Mr. Christiansen [Apex] in this regard I had Larry Johnson cas-

> ually contact him by phone and tell him that I had not received the information that he promised to send." (Pl. Ex. 62; R. 167.)

As a result of this exchange, Apex offered VCA their equipment and offered to supply VCA the names of Mr. Leir's suppliers of ores and oxides. (Id. at R. 168-169.) The commercial arrangements for the purchase of the aluminum ingots by VCA were then made between Apex and VCA. A VCA memorandum dated April 14, 1942 states:

> "We [Apex] had an interesting discussion concerning low copper grained aluminum which they produce and release with necessary priority approval and I therefore turned him over to our Purchasing Department with regard to this item." (R. 169.)

Apex subsequently terminated its association with petitioners. In January, 1943, Mr. Leir again requested Apex to resume production. (Df. V's Ex. V-2-C; R. 2523, 1193.)

b. Petitioners' Attempts to Persist in the Vanadium Business During the War Period After the Loss of Apex (June, 1942 to November, 1943)

Despite the loss of Apex as a manufacturing associate, petitioners persisted in their attempts to succeed in the vanadium business. First they arranged to have Apex continue production from January to June, 1942. Though petitioners were notified by Apex on January 27, 1942, that it was discontinuing its relationship with them, production continued until June, 1942, because Apex was advised by its attorneys that petitioners had a binding agreement with Apex. (Pl. Ex. 62; R. 675-676.) To avoid a lawsuit because of its breach of its contract with petitioners, Apex agreed to convert vanadium oxide for Continental

for a three month period, March to May 1942. (Pl. Ex. 122; R. 2215-2221, 1096.)

In August, 1942, petitioners commenced an independent vanadium operation. They rented a small warehouse in Long Island where they installed a grinder and mixer and started to produce Van-Ex, a vanadium compound in which vanadium oxide was mixed with a flux for direct entry into the steel bath. (Leir, R. 1192-1193, 1197-1198; Wolf, R. 840-845.) This product was in demand by Atlas Steels, a large Canadian Steel Mill. (Pl. Ex. 79; R. 2169 at 2173-2174, 779.)

Petitioners made the Van-Ex by mixing vanadium oxide with exothermic agents and flux. (R. 840-845.) It is noted that respondent Electromet cautioned its salesmen not to sell vanadium oxides with a reducing agent because this product posed an economic threat to their large investments in the furnaces and plants. (Pl. Ex. 73; R. 2160, 631.) Petitioners needed only a small pebble mill to make Van-Ex. (R. 1211.)

(1) The Loss of Independent Suppliers During This Period

The Nisley and Wilson Mill had gone out of production in October, 1942. (R. 655-662.) After that time, its production was placed under the control of USV as agent for MRC, under protest by Nisley.

In the Spring of 1942, USV was appointed as agent for the Metal Reserve Company (MRC), a governmental corporation organized to purchase vanadium oxide for the government. (Df. U's Ex. U-D; R. 2369, 373.)

The chief officers of USV were made the chief officers of USV as agent for MRC. Mr. Van Fleet was Vice Presi-

dent of USV as agent for MRC from 1942 to 1944. (R. 367-368, 338, 2363, 2168.) Mr. Burwell was made Supervising Engineer and Mr. Hill and Mr. Haldane, both USV officers, were named Mr. Burwell's Chief Assistants. (R. 1535, 228.) Mr. G. Donald Emigh, another USV officer, was made Assistant to Mr. Van Fleet in charge of the MRC Agency. (R. 1605.)

Under this agency contract, USV was placed in charge of the government's vanadium ore buying program. (Id.) It was given the authority to pay reasonable prices for the ore, the price not to exceed 50¢ per pound (Id.). The contract specifically provided that USV was to comply with all applicable federal, state and municipal laws, rules, regulations and orders. (Id. at R. 2377, para. 7.)

However, USV, as agent for MRC, established 31¢ as the base MRC price so that it would not be competitive with the 31¢ price USV and VCA had fixed as the price for the ore they purchased for their respective private uses and not for the government account. (R. 1559-1569.) Of course, if USV paid more for MRC ore it would have been required to meet the price for its private ore, which it could not do without violating the price fixing agreement it had made with VCA.

Between May, 1942 and January, 1944, when the Agency power was terminated, *every independent vanadium oxide mill on the Colorado Plateau was turned into an ore selling operation except Nisley and Wilson, and that mill's production was placed under USV's control. By* January, 1944 *not one independent oxide mill was in production.* (Pl. Ex. 18; R. 134, 125; Burwell, R. 209.)

(2) In 1942 and 1943, Respondents Continued to Refuse to Sell Vanadium Oxide to Petitioners

In early 1943, Mr. Leir hoped that he could obtain vanadium supplies from the War Production Board. (R. 1194-1196.) However, in March, 1943, MRC informed Continental that it could not fill Continental's order of 20,000 pounds of vanadium oxide. (Df. U's Ex. U-4-C; R. 567, 940.) Thereafter, in April, 1943, Continental Ore wrote Electromet:

> "We refer to the allocation made out by the WPB under the date of April 7 in our favor in the amount of
>
> 10,000 lbs. of metallic V contained (17,843 lbs.) contained V_2O_5
>
> in Vanadium Concentrate.
>
> "We would very much appreciate your kindly informing us when this material is expected to be ready for shipment so that we may give you our shipping instructions." (Df. U's Ex. U-4-D; R. 569, 942.)

Electromet honored the allocation. (Df. U's Ex. U-4-E; R. 570, 943.) MRC also shipped 10,000 pounds to Continental. (Df. U's Ex. U-2-P, R. 708-709; U-2-Q, R. 709-710; U-3-X, R. 925-926.) Thereafter, on April 30, 1943, Mr. Leir was billed at $1.15 a pound for the contained vanadium oxide. Continental protested the price of $1.15 since $1.10 was the quoted MRC price. (R. 948; Df. U's Ex. U-4-I; U-4-J; U-4-K; R. 575-578, 949-951.)

On May 21, 1943, Mr. Leir wrote Mr. Remmers of Electromet:

> ". . . We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present, these requirements are estimated to amount to 10,000 lbs. of V contained in pentoxide per month." (Df. U's Ex. U-4-M; R. 581, 955.)

Electromet rejected the request, and stated:

> ". . . we will be unable to accept your order at this price since the regular market price of this material is $1.15 per pound of V_2O_5, contained in the compound." (Df. U's Ex. U-4-N; R. 581, 957.)

Finally, on June 1, 1943 Electromet, "in order to close the files on the subject" agreed to take the $1.10 price and refused to sell any more vanadium oxide to petitioners. (Df. U's Ex. U-4-Q; R. 584, 960.)

(3) The Loss of Relations With Climax Molybdenum Co.

Petitioners' request for vanadium oxide from Electromet commencing in April, 1943, was for their expected continued relations with Climax Molybdenum Co. (R. 1018, 978.) Petitioners and Climax had entered into an agreement on February 10, 1943. (Pl. Ex. 111; R. 182, 1014.) Under this contract Climax was to convert 20,000 pounds of vanadium in vanadium oxide into ferrovanadium for petitioners.

At the trial, petitioners made an offer of proof to prove through Mr. Martin Wolf, petitioners' Vice-President, that Union Carbide threatened reprisals against Climax if Climax continued negotiations with petitioners and persisted in the vanadium business. This evidence was excluded by the trial Court.

The offer of proof, in part, as stated by counsel for petitioners to the trial Court, was as follows:

> "Mr. Arrouet said further that the plaintiff, the Continental Ore Company, had no business in the vanadium business. Mr. Arrouet said further to the plaintiff that they had better stay away from Climax and not try to make any arrangements with Climax,

and they were then entering negotiations with them, as the offer of this evidence will tend to show.

"Mr. Arrouet told them to stay away from Climax, and, if Climax got into the business, that Union Carbide would undertake a reprisal against the Climax Molybdenum Company.

"He said, in that connection, that Union Carbide had available at its plant in California, its tungsten operation in California, quantities of molybdenum that they would use against the Climax Molybdenum Company if that company entered into negotiations with the plaintiff to manufacture ferrovanadium for the account of the plaintiff or under a joint operating arrangement with the plaintiff.

"At that juncture this witness, we offer to prove, that this witness said, in substance or effect, 'Does it mean, then, Mr. Arrouet, that the picture of the world is something like this: God told Electromet to make vanadium, tungsten, ferro-manganese and God told Vanadium Corporation to make ferrovanadium and that nobody else would be allowed into these fields?' To which the employee of Electromet Company and the Union Carbide affiliate answered: 'That was just about it.' And 'That's the way it was going to be.'"

"We further offer to prove at this time, that Mr. Arrouet then made an offer which involved giving the plaintiff a little business in the Canadian market if he promised to stay out of it thereafter."

* * * * *

"Mr. Alioto. May I supplement the offer, if your Honor please? We offer to prove at this point that the Canadian Government was totally oblivious to the purpose for which its agent, the Electro Metallurgical Company of Canada, made its decision not to deal

with the plaintiff and to eliminate the plaintiff from the Canadian business." (R. 828-831.)

(4) Complete Prevention and Elimination of Petitioners From Exporting Their Products to Canadian Customers

Atlas Steel, Ltd., a very large Canadian producer of steel, was one of petitioners' largest Canadian customers. (R. 802.) Petitioners' records show shipments of Van-Ex to Atlas Steels in every month from March of 1942 to the end of the year. (R. 802-803.) Shipments stopped beginning in 1943. Petitioners offered to prove that this exclusion was pursuant to the overall conspiracy between respondents Union Carbide (and its affiliate Electro Metallurgical Company, an American Company with head offices in New York) and VCA to monopolize the entire vanadium business, and that the elimination of petitioners by cutting off their Canadian customers, through control of the Canadian subsidiary was another act in furtherance of that basic conspiracy. The evidence with respect to respondents' acts concerning the Canadian situation was not admitted and consequently was withheld from the jury. As a result, the record for review consists of an offer of proof made by petitioners' counsel which appears at pages 801-840 of the record, and an exchange of correspondence between petitioners and Electromet of Canada which appears in Volume IX, pages 438-468 of the record. (Pl. Ex. 80-109 for Id.; R. 438-468, 805-839.)

Petitioners offered to prove that (R. 826-828):

"Now, if your Honor please, we offer through this witness to prove the following facts, that at the end of 1942 and 1943 the Electro Metallurgical Company of Canada, which had been appointed as the purchasing agent by an agency of the Canadian Government,

that is, the purchasing agent for vanadium, determined that it would not permit any further shipments from the Continental Ore Company into the Canadian market. In that connection we offer to prove that he was acting under instructions from the officials of Union Carbide or its affiliate in order to eliminate the plaintiff from the Canadian market."

* * * * *

". . . We tentatively offer to prove in any event that it was the Carbide officials and employees which directed their wholly-owned and controlled subsidiary organization, the Electro Metallurgical Company of Canada, Ltd., to eliminate the plaintiff from the Canadian market, to take away his Canadian customers, and to supply those customers between the Vanadium Corporation of America and Union Carbide.

"We offer to prove in this connection that it was the intent and purpose of the Carbide officials and employees to use the Canadian agency for the purpose of restraining the plaintiff's trade, and specifically for the purpose of carrying out the conspiracy to restrain and to monopolize the vanadium industry in the United States and Canada. He is one of the means in connection with that monopolization and restrain(t) to eliminate the Continental Ore Company from the business."

When petitioners requested an allocation from the Canadian subsidiary to permit them to ship Van-Ex to fill an order of Atlas Steel, the allocation was refused. (Pl. Ex. 100; R. 458, 823; Pl. Ex. 102; R. 460, 823; Pl. Ex. 104; R. 462, 825-826; Pl. Ex. 107; R. 465, 826.) However, VCA was permitted to ship and actually was shipping into Canada during the same period of 1943 and 1944. (Pl. Ex. 17; (1943) p. 5, R. 127; 124, (1944) p. 6, R. 133, 124.) As

a result, petitioners' attorney, a Mr. Code, contacted Mr. Bateman, the Metals Controller of Canada, to complain of the discrimination and elimination of petitioners from the Canadian market. Mr. Code was instructed to have petitioners contact a Mr. Walker of Electromet in New York City who would handle the problem. Petitioners wrote to Mr. Walker. (R. 848; Pl. Ex. 80; R. 438, 805.) Subsequently, and without solicitation, petitioners received a telephone call from M. D. Arrouet in New York City from the Electromet and Union Carbide offices at 30 East 42nd Street in connection with this complaint. (R. 848-850; Pl. Ex. 81; R. 438, 818, 834.) After additional unsuccessful requests to the Union Carbide Canadian subsidiary for permission to ship to petitioners' Canadian customers (Pl. Ex. 82-98; R. 449-456, 818-822) petitioners' Mr. Wolf met with M. D. Arrouet at the Electromet and Union Carbide offices in New York in protest of the continuous refusal to allow petitioners to ship into Canada. (R. 847-850; Pl. Ex. 109, R. 467, 834.) Petitioners offered to prove the conversation quoted above. (R. 829-831; Pl. Ex. 109; R. 467, 834.)

c. Petitioners Persisted in Their Attempts to Enter the Vanadium Industry Following the End of Vanadium Oxide Stockpiling Period. November, 1943 to 1946

(1) Respondents Continued to Refuse to Sell Vanadium Oxide to Petitioners, Who Were Unable to Succeed in Their Vanadium Venture With Imperial Paper and Color Corp.

In November, 1943, the emergency shortage of vanadium oxide was over. (Pl. Ex. 113; R. 184, 1019; Df. U's Ex. U-P; R. 407-414.) Vanadium oxide was in over supply. (R. 547.)

In January, 1944, petitioners entered into a contract with the Imperial Paper and Color Corporation. (Pl. Ex.

110; R. 2175, 1014.) Under the terms of this agreement, Imperial promised to enter into the production of ferrovanadium and appointed petitioners as its exclusive sales agent. (Id.)

Imperial never did produce ferrovanadium for the reason that it could not be assured of regular, steady supply of vanadium oxide. (Pl. Ex. 114, 115; R. 185, 2179, 1021, 1023.)

In November, 1943, petitioners made requests to both Electromet Sales and VCA for monthly supplies of oxide. (Wolf, R. 1012-1013; Burwell, R. 546-547; Pl. Ex. 40, 41, 42; R. 152, 153, 155, 1262, 1264, 1299.) These requests were jointly refused. (Pl. Ex. 42; at R. 154, 157.) The evidence very specifically showed that petitioners made these requests for vanadium oxide from the respondents in November, 1943, in order to supply their manufacturing associate, The Imperial Paper and Color Corp., with vanadium oxide. This supply of vanadium oxide would have permitted Imperial to start production of ferrovanadium under a contract which petitioners were negotiating with Imperial, which petitioners were positive they could make (R. 1013), and which they eventually made. (Pl. Ex. 110, R. 2175, 1014.) Mr. Wolf testified:

> "Q. (By Mr. Alioto) Now, Mr. Wolf, you were with Continental Ore Company in November of 1943, were you not?
>
> A. That's correct.
>
> Q. And you were with them at the time that the request was made in November to both Electro Metallurgical Sales Corporation and Vanadium Corporation of America to supply you with regular monthly supplies of vanadium oxide?
>
> A. That's correct.

Q. Now, what was the situation in November of 1943 with respect to contractual arrangements with any proposed manufacture of ferrovanadium? Did you have any at that time?

A. In November of '43?

Q. Yes.

A. We had a contract with Imperial Paper.

Q. Well, I think your dates may be a little awry, but to establish those definite dates on matters on which both—Mr. Archer. That's January, 1944, whatever the date is. We can develop that.

A. We had negotiations at that time which we were sure would lead to a contract with Imperial Paper, so we were trying to,——

Q. (By Mr. Alioto) All right. The contract was actually made in January of 1944, is that correct?

A. Yes. But we were trying to get a basis of raw materials for our negotiations for the forthcoming contract." (R. 1012-1013.)

The specific reason for respondents' refusal to supply petitioners at this exact time was that Union Carbide desired to exclude them from the industry. (Burwell, R. 546-547.) Burwell testified that Electromet did not sell oxide to Mr. Leir at this very time because respondents wanted "to keep him out of the vanadium business." (Burwell, R. 547.)

Imperial investigated all sorts of alternative sources of supply, including lead vanadate, flue dust from ocean going vessels, vanadium ash, and cuprodescloizite ores. (R. 877-907.) But Imperial concluded that there was not enough assurance of a steady, dependable source of supply to justify the manufacture of ferrovanadium. (Pl. Ex. 114; R. 185, 1021; Pl. Ex. 115; R. 2179, 1023.)

Therefore during the period 1938 to 1944, petitioners or their associates made the following requests for vanadium oxide from respondents:

Date	Request	Action by Respondents
y 28, 1939[11]	10,000 lbs. a year from VCA	No response
. 17, 1939[12]	5,000 lbs. oxide from VCA	Refused[13]
. 17, 1939[14]	4,000 lbs. ferro-vanadium from VCA	Refused[15]
rch 1940[16]	Vanadium Oxide from VCA	Refused[17]
. 17, 1940[18]	Oxide from Electromet	Refused[19]
ne 14, 1941[20]	Vanadic Oxide from Electromet	No response[21]
ne 16, 1941[22]	That petitioners be allowed to convert oxide for VCA	No response
ne 16, 1941[23]	That petitioners be allowed to convert oxide for Electromet	Rejected[23]
ly 16, 1941[24]	Through OPM, Vanadium Section, Petitioners asked for oxide from VCA	Refused
ly 16, 1941[25]	Through OPM, Vanadium Section, Appellants asked for oxide	Refused
ay 21, 1943[26]	That Electromet fill Continental's oxide requirements for the remainder of the year	Unable to accept[26]
ov. 16, 1943[27]	10,000 to 15,000 lbs. Vanadium oxide from VCA per month, any fixed length of time	Refused[27]
ov. 17, 1943[28]	10,000 to 15,000 lbs. vanadium oxide from Electromet per month any fixed length of time	Refused[28]

(2) Respondents' Monopoly Power Caused the Small Oxide Producers to Cease Production in 1944

(a) Nisley & Wilson

In December, 1943, Nisley & Wilson were notified that their MRC Tolling Agreement was being cancelled. (Df. U's Ex. U-2-U; R. 2440, 729.) However, on or about December, 1943 in instructions from MRC, USV had been given the discretion by MRC to extend Nisley & Wilson's MRC Tolling Agreement beyond January 1, 1944, if USV believed that Nisley & Wilson's program should be continued "in the interest of the procurement of *other* products than vanadium."[29] (Df. U's Ex. U-P; R. 408-409, 407.)

Nisley testified that the Nisley-Wilson Mill went out of production permanently in January, 1944, for the reason that the mill could no longer fight the monopoly control and tactics of respondents. (R. 667-668.)

Mr. Nisley testified:

"Q. Did you go back into business privately after January 1, 1944?

A. No, we did not.

Q. Why not?

• • •

A. We seriously considered it, and if the United States Vanadium had not stripped the mines of Gateway Alloys, there would have been no problem. We

[29]By the Fall of 1942, the United States had formed the Manhattan District to develop the Atomic Bomb. Union Carbide was appointed agent by the Government through the Union Mines Development Corporation, which was a subsidiary of Union Carbide. Like the USV-MRC agency, Union Carbide's officers were made officers of Union Mines. (Df. U's Ex. U-Q; R. 2397, 418.) The "other products" referred to in the discretion given USV by MRC was obviously uranium.

would have had plenty of ore supplied to do it, but the mines were still under contract to Metals Reserves Company——

• • •

I say, the mines were still under contract to Metals Reserves Company. In view of the things we had been up against, we felt we could not buck anymore and we closed down." (R. 667-668.)

(6) Respondents Directly Thwarted Petitioners' Plan to obtain or erect a ferrovanadium plant on the Colorado Plateau

In February 1944, Mr. Leir and the independent miners on the Colorado Plateau, including Mr. Bigler, one of the owners of Blanding Mine, met in Grand Junction, Colorado, to discuss the organization of a group of independent ore producers for the purpose of building a mill which would have assured sources of ore supply for it. (R. 1775-1777.) Mr. Leir came to Grand Junction on the urging of Mr. Bigler's associate, Mr. Dan Milenski. (Df. V's Ex. V-2-K; R. 2533-2544; 1715.) Mr. Leir offered to purchase Blanding's entire production and further promised that if Blanding produced 50,000 lbs. of vanadium oxide a month, "Continental undertakes to construct a plant in the State of Colorado for the utilization of its process for the manufacture of ferrovanadium." (Id., R. 2542.) Blanding questioned the organization of an association. (Id. at R. 2548-2549.) Mr. Leir replied:

"As long as your output is only 15,000 lbs. per month there are no particular difficulties with regard to our own outlets, but the moment you achieve a larger output, we would like to see an 'association" created, because the 'association' would give us a better

standing in the marketing of the finished product." (Id. R. 2251-2253 at 2252.)

But while the independent producers and Mr. Leir were formulating such plans, USV and VCA who foresaw the possibility of a competitive production, commenced plans to acquire and maintain control of the government mills which could be used in order to thwart such programs.

On February 29, 1944, Mr. Burwell wired Mr. Haldane that Brinker, Sitton and other promoters were trying to acquire the Durango Mill. (Pl. Ex. 37; R. 243.) When Union Carbide heard of these plans it moved swiftly and acquired the mill at a cost of approximately $75,000. (Pl. Ex. 38; R. 2119, 244.) USV at that time had an option to purchase the mill for its cost less depreciation. (R. 241.) Mr. Burwell testified that USV acquired the Durango Mill after this exchange of correspondence warning that the independents were planning to acquire the Durango Mill. USV "wanted the plant to keep control of the production of vanadium" (R. 241-247 at 246) and because these independents were trying to buy it. (R. 224.) One of the reasons for the acquisition of the Durango Mill was:

> "1. To maintain its position in the vanadium industry in the southwest. Repeated reports have reached this company of plans of outsiders to acquire the plant in the event United States Vanadium Corporation decides not to exercise its option. The injection of additional operators in this field would undoubtedly seriously disturb conditions in the vanadium industry in the post-war period." (Pl. Ex. 38; R. 2117, 2119.)

And on February 15, 1945, VCA acquired the Monticello Plant under a lease with the Defense Plant Corporation. (R. 2070.) With this acquisition all the vanadium oxide plants on the Colorado Plateau were controlled and operated by the respondents who, by then, enjoyed a 100% control of the production of ferrovanadium.

(3) The Period 1946 and Thereafter

On June 27, 1946, respondents were indicted for criminal violation of the Sherman Act. (R. 22, 30, 40.) On September, 1948 the indictment was dismissed and was superseded by an information. In 1946, after criminal action investigations had been started, Electromet Sales offered Continental requirement contracts for its *domestic* manufacturing requirements and even then limited the contracts only to petitioners' domestic requirements. (Df. U's Ex. U-4-X, R. 2459, 977; U-4-Y, R. 982; U-4-Z, R. 2461, 982; U-5-A, R. 983; U-5-B, R. 984; U-5-H, R. 997, R. 978-980.) They determined that no longer could they persist in their attempted entry into the vanadium business until the government action was finalized and the industry "opened up by government action". (R. 978-980.) Mr. Wolf testified that he considered such offers had come far too late:

> ". . . I don't think, first, that it is very good practice to base an investment and a business on raw materials procured from your competitors after your competitors have tried by all means possible to eliminate you from the market." (R. 979.)

(4) Petitioners Experienced Outstanding Financial Success in All Fields of Minerals, Metals and Alloys Except Vanadium

Petitioners' books and records showed in vanadium a growth of production and sales during the period 1939 to 1942. (Pl. Ex. 119, R. 2212, 1089.) Profits were made during this period. (Id., R. 2213.) Vanadium sales went from $60,000 in 1939 to $250,000 in 1942. Apex alone had produced 70,000 lbs. of ferrovanadium in 1941 and 28,000 pounds in 1942. (Id.) But petitioners' business suffered a severe decline in 1943 and the sales in 1944 and 1945 were token only. Whereas petitioners had shipped 71,555 lbs. of Van-Ex to Canada in 1942, these shipments fell to only 6,480 lbs. in 1943. (Pl. Ex. 79; R. 2169, 797.) Failure in this field was an exception to petitioner's outstanding successes in other minerals, metals and alloy fields. For example in 1942, petitioners sold $252,000 of fluorspar and $249,000 in vanadium products. (Pl. Ex. 125 for Id.; R. 539, 1106.) By 1945, petitioners' fluorspar sales had increased to $779,000 but their vanadium sales had dropped to $17,529. By 1957, petitioners had sold over $6,500,000 of fluorspar.

Petitioners expanded with other products such as coal, borite, fertilizers, lead and zinc, cement, aluminum, iron ore, asphalt, magnolith. Continental's group of companies operating in these fields grew from a net worth of $36,674 in 1939, when vanadium was the principal product, to a net worth of $5,339,240 in 1957. (Pl. Ex. 124 for Id.; R. 537, 1103.)

5. OPINION OF THE COURT BELOW

The Court below affirmed the judgment against petitioners on the ground that even assuming *all* petitioners' contentions, the trial Court should have granted a directed verdict for respondents as a *matter of law*. The lower Court held that the directed verdict should have been granted because petitioners had not proved a causal connection between their injury and respondent's violations of the antitrust laws, both of which the lower Court *assumed to have occurred* for the purposes of its opinion.

Although, for the purposes of its opinion, the lower Court assumed that the conspiracy alleged by petitioners occurred and that petitioners were in fact eliminated from the vanadium industry, it did not review the evidence as a whole, but, instead, limited the case to four specific periods of time:

(1) *The Apex contract period* involving the production of ferrovanadium: (2) *The Van-Ex period* which followed the Apex cancellation and which involved the distribution and sale of Van-Ex: (3) *The Climax arrangement* which the lower Court arbitrarily limited to one contractual arrangement; and (4) The 1944 and 1946 period in which petitioners attempted to manufacture ferrovanadium on a permanent basis with *Imperial*. In considering these periods, the lower Court sat as a trier of fact and rationalized the evidence, drawing inferences and making factual determinations which are reserved for triers of fact, the jury in this case, and not for appellate Courts.

The lower Court further held that petitioners were required to prove that their continuous lack of steady sup-

plies was solely the result of respondents' refusals to deal with them and respondents' efforts to prevent them from obtaining raw materials elsewhere, and, as a factual determination, held that there was no evidence upon which reasonable men could make such findings. In making this factual determination, the lower Court reviewed the record and resolved all factual conflicts in favor of respondents. It failed to resolve factual conflicts in favor of petitioners as it was required to do under rules of judicial review and failed to give petitioners the benefit of every inference or presumption to which the evidence and the law entitled them.

The Court below found:

(1) *Apex Period:* Since respondents had not been requested to sell vanadium oxide since March, 1940, there could be no causal relationship between petitioners' lack of supplies and the Apex contract termination in January, 1942;

(2) *Van-Ex:*

(a) Petitioners' refusal to buy Nisley & Wilson's production in June, 1943, October, 1943, and January, 1944 precluded petitioners from arguing that respondents prevented the acquisition of raw materials at this time;

(b) Petitioners' inability to sell Van-Ex to their Canadian customers because of the action of one of Union Carbide's subsidiaries was the result of governmental action and, therefore, could form no part of petitioners' proof;

(3) *Climax:* The record was limited to one single contract and an offer of proof to show that Union Carbide

had threatened petitioners and Climax with reprisals "appears to be directed against a corporation with which Continental had no business, since the nature and existence of the alleged 'pending negotiations' are not shown by the record.";

(4) *Imperial:* The failure to request supplies from respondents during the period January, 1944 to 1945 prevented petitioners from claiming injury because of respondents' joint refusal to deal with petitioners. The lower Court found as a factual determination, that though in November, 1943 petitioners had sought vanadium oxide, some Nisley & Wilson production was available to petitioners and, therefore, respondents' joint refusal had no exclusionary effect on petitioners.

These determinations were factual conclusions the lower Court drew from the evidence presented. In so doing the Court below reviewed the evidence of "causation", resolved factual conflicts against petitioners and drew inferences and presumptions from the evidence which reasonable men could find otherwise. The fact that the trial Court submitted the case to the jury after two motions for a directed verdict had been made by respondents is an indication that even the trial judge thought that the evidence presented a factual jury issue.

In deciding the case in this manner, the Court below failed to even consider the many errors which petitioners raised as points of appeal in their Appeal to the Ninth Circuit and, which, without any doubt, had a strong effect on the jury verdict. For this Court's information only, these alleged errors are set forth in Appendix A to this Brief.

VI.

SUMMARY OF THE ARGUMENT

A purpose of the Congressional support of private actions under the antitrust laws is to afford a redress for wrongs done against a persistent and capable competitor who has been excluded from the competitive market pursuant to a conspiracy to monopolize. *Standard Oil Co. v. United States,* 221 U.S. 1 (1911); *Klor's, Inc. v. Broadway-Hale Stores, Inc.* (1959), 359 U.S. 207. The antitrust laws provide free and open access to the market place free of such a conspiracy and free of acts of impact committed pursuant to such a conspiracy. *American Tobacco Co. v. United States* (1946), 328 U.S. 781; *United States v. Griffith,* 344 U.S. 100 (1948); *Baush Machine Tool Co. v. Aluminum Co. of America* (2 Cir., 1934), 72 F.2d 236.

Congress in adopting the Sherman Act created a statutory cause of action providing for the recovery of damages from wrongdoers who interfere with free access to the market place. *United States v. Addyston Pipe & Steel Co.* (6 Cir. 1899), 85 Fed. 271, 279.

In the instant case, respondents acquired a 100% monopoly in the vanadium industry, which the Court below admitted was achieved pursuant to an intent to monopolize and with an intent to eliminate all competitive forces from the vanadium industry, one of the competitors being petitioners. In addition, it was specifically confessed by an executive officer of USV, one of the respondent companies, that it was their specific intention to eliminate these petitioners from the vanadium industry. This same officer testified that the President of VCA told him that

he did not want petitioners in the vanadium industry. Thus, we have here an admitted violation of the antitrust laws, an admitted intent to eliminate petitioners and a 100% monopoly power in respondents to do so. Petitioners were in fact eliminated from the vanadium industry after respondents committed innumerable predatory acts which were specifically and deliberately intended to interfere with petitioners' sources of supply, with petitioners' manufacturing associates and with petitioners' customers. In conjunction with these acts, respondents, who were supplying each other with supplies, jointly refused to deal with petitioners. We have, therefore, two respondents who possessed a monopoly power specifically conspiring to eliminate petitioners as a competitor and the actual in fact elimination of petitioners from the industry.

At the trial, respondents maintained that petitioners' elimination from the vanadium industry was caused by forces other than their conspiracy. However, petitioners contend that under the evidence in this case the question of legal causation is a factual question which must be submitted to the jury and that under *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931) an appellate Court cannot take this question away from the jury by reviewing the record and deciding it as a *matter of law.* Causation is a question of fact and when facts relating to causation are in conflict they are to be submitted to the jury in a jury case. *Jacob v. City of New York*, 315 U.S. 752, 756-758 (1942).

Rules relating to intentional torts are applicable in a Sherman Act case such as we have here. This is really

not a "legal cause" action. The "legal cause" doctrine has no place in this case on this record. Two monopolists intended to eliminate petitioners as part of a conspiracy to monopolize. Petitioners were in fact eliminated. They were eliminated after many wrongful and predatory acts had been committed against them, their suppliers, their associates and their customers, in violation of the antitrust laws. Respondents intended to exclude petitioners and they did so. Respondents must be held for the results they intended by their acts in violation of the antitrust laws. Causation is proved when the plaintiff proves impact or contact of such wrongful acts on his business. Restatement Torts, §§ 613-17; §§ 279-280.

This Court has specifically repudiated the use of "legal cause" to prevent the recovery of damages from a wrongdoer in *Story Parchment Co. v. Paterson Paper Co., supra,* and in *Bigelow v. RKO Radio Pictures, Inc.,* 327 US. 251 (1946). The decision by the Court below admits that it refused to follow the *Bigelow* case solely on the ground that *Bigelow* involved general losses inflicted by the defection of countless, individual customers. But this aids petitioners, for *Bigelow* was concerned with the "natural tendency" of acts in restraint of trade on a continuing business. In the instant case, there was direct impact and contact, as well as natural tendency to harm a persistent business venture which tried to succeed in the vanadium industry. It was denied this opportunity by being eliminated pursuant to respondents' conspiracy and their intent to exclude petitioners. The action then is indistinguishable from *Story Parchment Co. v. Paterson Parchment Paper Co.,* 282 U.S. 555 (1931). In the *Story Parch-*

ment case, the issue of legal cause was held to be a factual question to be decided by the jury in a Section 2 conspiracy to exclude action involving facts similar to those involved in the case at bar. The principles set forth in the *Story Parchment* case were erroneously denied to these petitioners.

Moreover, the Appellate Court below, in deciding whether a directed verdict should be granted on the issue of causation as a matter of law, did not view the evidence as a whole, did not allow petitioners the benefit of all their evidence, did not allow petitioners the benefit of all the inferences and presumptions to which the evidence entitled them and did not resolve all the conflict of evidence in favor of petitioners as the rules applicable to judicial review required it to do. This procedure was not only contrary to appellate procedure but is in direct conflict with this Court's opinion in *Beacon Theatre, Inc. v. Westover,* 359 U.S. 500 (1959). In effect, petitioners were denied their right to a jury trial free from prejudicial error. Instead the Court below required petitioners to act to circumvent admitted violations of the antitrust laws by respondents. These standards were not reasonable under the facts of the case and clearly against established judicial enforcement of the antitrust laws. The Sherman Act creates duties on the part of monopolists and does not allow these wrongdoers to expect the law to soften the impact of their wrongs. *United States v. Griffith,* 334 U.S. 100 (1948); *Gamco, Inc. v. Providence Fruit & Product Bldg.* (1 Cir., 1952), 194 F.2d 484; *American Federation of Tobacco Growers v. Neal* (4 Cir., 1950), 183 F.2d 869.

Respondents were engaged in an overall conspiracy to monopolize the vanadium industry. Part of that conspiracy was to eliminate the petitioners from the Canadian market by preventing them from shipping vanadium products to their Canadian customers, particularly Atlas Steel, Ltd., one of the largest Canadian Steel companies. This was accomplished by utilizing Electromet of Canada, a wholly owned and controlled subsidiary of one of the respondents. Electromet of Canada, pursuant to an agency agreement with the Metals Controller, an agent of the Canadian government, completely controlled the importation and allocation of vanadium products into Canada during the war. In furtherance of their conspiracy, respondents used this agency position to prevent petitioners from selling to their Canadian customers and to allow only respondents to ship their products into Canada. It is clear that the unlawful use of the Canadian subsidiary for the purpose of violating the antitrust laws did not immunize respondents from liability. The fact that the Canadian subsidiary had an agency agreement with the Canadian government did not permit the respondents to conspire to use that agency to eliminate petitioners from the Canadian market. The citation by the Court below to *Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc.*, 365 U.S. 127 (1961) for the proposition that respondents' conduct in this respect did not violate the Sherman Act is patently erroneous. The *Noerr* decision held that the antitrust laws did not apply to joint action to lobby or to influence the passage of legislation, which is not at all involved in the case at bar.

The *Noerr* case does not apply to ordinary commercial activity which discriminates against outsiders. The Sherman Act does not allow immunity or exemption for commercial conduct or activity working on the free flow of interstate and foreign commerce. ***Maryland & Virginia Milk Producers Ass'n. v. United States,*** 362 U.S. 458 (1960); ***United States v. Socony Vacuum Oil Co.,*** 310 U.S. 150 (1940); ***United States v. Sisal Sales Corp.,*** 274 U.S. 268 (1927); ***United States v. Deutsches Kalisyndikat Gesellschaft*** (S.D. N.Y. 1929), 31 F.2d 199.

VII

ARGUMENT

A

QUESTION 1

THE DETERMINATION BY AN APPELLATE COURT OF THE QUESTION OF CAUSATION AS A MATTER OF LAW IN AN ACTION BROUGHT UNDER SECTIONS 1 AND 2 OF THE SHERMAN ACT INVOLVING AN ADMITTED CONSPIRACY TO MONOPOLIZE BY RESPONDENTS HOLDING 100% OF THE INDUSTRY, AFTER PROOF OF AN INTENT BY RESPONDENTS TO ELIMINATE PETITIONERS AND THE SHOWING OF PERSISTENT AND BONA FIDE EFFORTS BY PETITIONERS TO ENTER THE INDUSTRY, COUPLED WITH PROOF OF DIRECT AND IMMEDIATE IMPACT AND HARM CONSISTING OF RESPONDENTS' REFUSALS TO DEAL, INTERFERENCES WITH PETITIONERS' SUPPLIES AND MANUFACTURING ASSOCIATES, ORDERS TO LEAVE THE INDUSTRY, THREATS OF REPRISALS AGAINST PETITIONERS' MANUFACTURING ASSOCIATES, AND THE ELIMINATION OF PETITIONERS' EXPORT MARKET BY THE USE OF A SUBSIDIARY IS CONTRARY TO THE DECISIONS OF THIS COURT, THE PURPOSES OF CONGRESS AND THE JUDICIAL APPLICATION OF THE SHERMAN ACT

A. The decision below is in basic conflict with the purposes of Congress in establishing liability on those who conspire to monopolize, with the decisions of this Court which have rejected the determination of legal cause as a matter of law in Sherman Act litigation, and with decisions of this Court which allow damages to those who suffer from the natural consequences of wrongful and intended acts

The Sherman Act is a Congressional determination that intentional acts aimed at the destruction of competitors are actionable by those who are the objects of the restraints. As a matter of judicial enforcement of Congressional purpose, proof of a conspiracy to monopolize and to exclude a competitor creates liability, and causa-

tion is proved upon the showing of impact or contact and the in fact elimination of a persistent competitor.

We respectfully submit that even though the Court below conceded that the antitrust laws had been violated by respondents, its decision requires plaintiffs in a private antitrust action to be subjected to a rigorous factual test that the cause of their injury be proved to a reasonable certainty as a matter of law, a test which is not warranted by judicial construction of Congressional purposes. The concept of "legal cause" as applied by the lower Court has never been applied to an action where there has been direct, immediate contact on a business pursuant to a plan and intent to monopolize and to exclude and the actual in fact exclusion of the business. Petitioners respectfully submit that in such a setting the application of the test of "sufficiency of causation" or "proof of causation to a reasonable certainty" or "legal cause" conflicts with the very nature and meaning of a private antitrust action as intended by Congress and places the judiciary in an antagonistic position to the purposes of Congress. The lower Court decision applies general tort doctrines which were specifically rejected by this Court in *Bigelow v. R.K.O. Radio Pictures*, 327 U.S. 251 (1946) and which have no application whatsoever to a conspiracy to monopolize case. *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931).

A private litigant under Section 4 of the Clayton Act need only prove a violation of the general prohibitions on unreasonable restraints of trade and that he has thereby suffered injury. *Radovich v. National Football League*, 352 U.S. 445 (1957). The Sherman Act violations

encompassed here involve the commission of *intentional* acts specifically designed to interfere with the free workings of the market place and natural forces of supply and demand. Where the conduct proved is the kind of predatory business aggression which stems from a conspiracy to monopolize, the private party need only prove the contact or the impact of the combination upon his business to pass the test that he "has thereby suffered injury". This is so as a matter of judicial interpretation of Congressional purposes. The act of 1890 was a statutory adoption of common law principles voiding commercial activities held to be in restraint of trade. The business conduct involved was intentional and, as a matter of law, not justified by the rules of competition.

As stated by this Court in *Standard Oil Co. v. United States,* 221 U.S. 1, 58 (1911), the law denounced acts which:

> ". . . give rise to the inference or presumption that they had been entered into or done with the *intent to do wrong* to the general public and to limit the right of individuals, thus restraining the free flow of commerce and tending to bring about the evils, such as enhancement of prices, which were considered to be against public policy . . ." (Emphasis added) (p. 58).

The Sherman Act allowed recovery for intentional business invasions of the "right of individuals". The private right of recovery under the Sherman Act extended the benefits of the principles of damage law providing a redress where a wrong has been done to business conduct banned by the Act. The effect of the Act of 1890 was to give a cause of action to those who suffered by business

restraints. If a person was harmed in his business by conduct in restraint of trade he was considered directly injured. *United States v. Addyston Pipe & Steel Co.* (6 Cir. 1899), 85 Fed. 271, 279; *Wheeler-Stenzel Co. v. National Window Glass J. Ass'n.* (3 Cir. 1907), 152 Fed. 864, 874; *Albert Pick-Barth Co. v. Mitchell Woodbury Corp.* (1 Cir. 1932), 57 F.2d 96; *Monarch Tobacco Works v. American Tobacco Co.* (Cir. Ct. W.D. Ky. 1908), 165 Fed. 774, 777; *A. C. Becken Co. v. Gemex Corporation* (7 Cir. 1959), 272 F.2d 1.

A Congressionally supported cause of action for intentional restriction of the free market place became established and judicial principles applicable to intentional torts were imposed. It is elementary that, under tort law, plaintiff proves liability when he proves acts intentionally committed to cause harm and the impact or contact of those acts upon him. An intentional act plus contact creates liability. (Restatement Torts, §§ 13-17; §§ 279-280.)

Once liability is established, the wrongdoer is liable for all the natural consequences of his intended acts. Restatement Torts, § 915:

> "A person who commits a tort against another for the purpose of causing a particular harm to the other is liable for such harm if it results, whether or not it was expectable, except where the harm resulted from an outside force, the risk of which was not increased by the defendant's act."

See also 15 Am. Jur., Damages, §§ 65-70.

Under tort law, respondents are viewed as intentional wrongdoers and are liable for the result they intended to bring about by their deliberate violations of Congres-

sionally established rules, the result in this case being admittedly the elimination of petitioners, upon the showing of impact or contact on petitioners' business. We respectfully submit that there is ipso facto presented a factual issue on causation when it is shown that the conspiracy to monopolize was intentionally entered into, had as its goal the exclusion of competitors, involved acts in violation of law which affected and had an impact on competitors and the intended exclusion results. "It is generally agreed that results intended by an actor are proximate if they, in fact, take place." McLaughlin, *Proximate Cause,* 39 Harvard L.R. 149, 151 (1925). See also Terry, *Proximate Consequence in the Law of Torts,* 28 Harvard L.R. 10, 17 (1914); Edgerton, *Legal Cause,* 72 U. of Pa. L.Rev. 211, 343, 358-359 (1924); Smith, *Legal Cause In Actions of Tort,* 25 Harvard L.R. 103, 228-229 (1911).

In the instant case, petitioners showed that it was the intent of respondents' conspiracy to monopolize and to eliminate all competition, specifically including petitioners herein. Mr. Blair Burwell, the chief executive officer of one of the respondents, so testified. In fact, for the purposes of its opinion, the lower Court *admitted* this. Petitioners also showed that they were eliminated from the vanadium business and suffered injury thereby. This also the Court admitted for the purposes of the opinion. Therefore, the result which respondents intended actually occurred.

Petitioners' evidence showed that pursuant to the conspiracy, which was directly aimed at petitioners and other competitors, respondents did the following:

(1) Withheld over 90% of the supply of vanadium oxide from petitioners during the period 1939 to 1946. (Pl. Ex. 132, R. 2258-2265, 1245; Pl. Ex. 65, R. 170-171, 778; Pl. Ex. 128, R. 189-190, 1239; Pl. Ex. 77, R. 176-177, 776; D's. U. Ex. U-4-M, R. 580, 955; D's. U. Ex. U-4-N, R. 581, 957; Pl. Ex. 40, R. 153, 269; Pl. Ex. 41, R. 154, 270; Pl. Ex. 42, R. 155-157, 270.)

(2) Directly interfered with and prevented petitioners' independent avenues of supplies from producing or shipping vanadium oxide to petitioners. (Pl. Ex. 118, R. 2202-2211, 1065; Nisley & Wilson, R. 654-668); (Loma (Morrison, Ackerman), R. 303-306; Blanding, Pl. Ex. 131, R. 2234-2251, 1242; R. 1738-1759; R. 1950; Pl. Ex. 157, R. 2341-2352, 1791; R. 1950; North Continent, R. 483-484; D's. U's Ex. U-2-E, R. 481-482; D's. U's Ex. U-3-R, R. 565-566, 915; D's. U's Ex. U-3-T, R. 918, 566.)

(3) Directly induced petitioners' manufacturing associates to discontinue business relations with petitioners. (Pl. Ex. 62; R. 163-169, 584; R. 1335-1337, 1072; 1947-1949.)

(4) Ordered petitioners to stay out of the vanadium business and threatened commercial reprisals to those who associated with petitioners. (Offer of Proof, R. 823-829.)

(5) Restricted petitioners' exports to Canada so as to deprive petitioners of an important market for their products. (Offer of Proof, R. 826-868.)

It is undeniable that in each of these activities:

(a) Respondents violated the Sherman Act; (b) Respondents intended to injure petitioners, and (c) Respondents' conduct had a direct, immediate and injurious im-

pact on petitioners, who were, as a result of these activities, unable to remain in the vanadium industry on a sound economic basis. (R. 970-972, 883-884, 891.)

In each of these actions respondents violated the will of Congress by using illegal means to cause injury and harm to petitioners. *United States v. Griffith*, 334 U.S. 100 (1948); *Fashion Originators' Guild v. Federal Trade Com'n.*, 312 U.S. 457 (1941); *Kiefer-Stewart Co. v. Joseph E. Seagram & Sons*, 340 U.S. 211 (1951); *Klor's Inc. v. Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1949); *Standard Oil Co. v. United States*, 221 U.S. 1 (1911); *American Tobacco Co. v. United States*, 328 U.S. 781 (1946); *United States v. Sisal Sales Corporation*, 274 U.S. 268 (1927); *United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150 (1940).

As a matter of Congressional mandate, the conspiracy involved herein and the practices undertaken pursuant to it are deemed injurious to competition. By judicial construction of Congressional purposes, the practices involved herein are pro tanto injurious to the market place, those competing in it and to these petitioners, one of those competitors.

B. The decision below is in direct conflict with Story Parchment Co. v. Paterson Parchment Paper Co., 282 U.S. 555 (1931); Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946); Eastman Kodak Co. v. Southern Photo Materials Co., 273 U.S. 359 (1927), All Landmark Decisions of This Court

1. The decision below is in direct conflict with Story Parchment Paper Co., 282 U.S. 555 (1931), which held that the proof of a conspiracy to monopolize contemplating the elimination of the plaintiff in an effort to maintain a monopoly control and the demise of the plaintiff-competitor presented sufficient evidence of causation to sustain a verdict for the plaintiff

Story Parchment Co. v. Paterson Parchment Paper Co., 282 U.S. 555 (1931), is all controlling here. In that case, this Court held that proof of conspiracy to eliminate a competitor by three companies holding monopoly power in an effort to maintain such monopoly control, and the in fact demise of the competitor presented sufficient evidence of causation to sustain a verdict. This is precisely the factual situation presented in the case at bar.

In *Story Parchment* the majority lower Court opinion reasoned that although there was proof of conspiracy to monopolize by fixing prices in order to eliminate a sole competitor, a fact assumed to be true in the opinion of the Court below in the case at bar, that the jury verdict in the trial Court should be reversed because: (a) loss of profits would be based on surmise and conjecture; and (b) the plaintiff did not have sufficient capital to meet the competition of defendants anyway. Therefore, the majority opinion concluded, the plaintiff had not proved causation. The majority opinion of the lower Court in *Story Parchment* stated in summary:

> "The plaintiff has not, therefore, sustained the burden of proving that it has suffered any measurable damage

from the reduced prices at which it was compelled to sell its product by reason of the alleged unlawful conspiracy of the defendants, or that the subsequent depreciation of its plant was due to any violation of Section 2 of the Sherman Anti-Trust Act (15 USCA §2) by the defendants." (37 F. 2d 541.)

In a dissenting opinion, Judge Anderson concluded that the damages suffered by plaintiff were not speculative and that the Court had improperly invaded the province of the jury in determining that the plaintiff would have died anyway. The dissenting opinion's statements are precisely applicable here. The Court stated (p. 542):

"... In a word, we have here, indisputably, a combination to kill a competitor followed by the speedy death of that competitor."

And at pages 543-544 of the dissenting opinion, Judge Anderson stated:

"The statements in the majority opinion that the plaintiff went out of business for lack of sufficient capital, 'and that its failure was inevitable, either from lack of capital or inefficient management or both,' amount to usurping the function of the jury. Indeed, the opinion on damages does not read at all like the opinion of an appellate court, dealing only with questions of law; it deals largely with facts solely for the jury.

"There is no discussion of the soundness of the trial court's instructions on damages. By necessary implication, they are conceded to be correct. The conclusion is (to repeat) that, without the defendants' conspiracy to put the plaintiff out of business, it would have died anyway. The logic is, in that regard, hardly

distinguishable from setting up the mortality of all human beings as a defense to an indictment for manslaughter or murder. The undeniable facts are that the defendants conspired to kill the plaintiff, and the plaintiff died. The majority opinion is to the effect that the conspiracy was unnecessary; that the plaintiff would have died anyway. I do not assent to such reasoning or its results."

This Court granted certiorari and rejected the majority opinion of the lower Court and adopted Judge Anderson's dissenting opinion. This Court held "That the petitioner was injured in its business and property as a result of this unlawful combination we think also finds sufficient support in the evidence." (282 U.S. 559.)

As to the conclusion of the lower Court in the *Story Parchment* case that the plaintiff could not prove that defendants caused the depreciation of his plant since it lacked sufficient capital anyway, this Court stated:

"Disposing of the second item of damages, the court below after referring to evidence tending to show that petitioner was not in a thriving financial condition, said that petitioner was without capital to meet the situation which it faced, even if there had been no conspiracy and there had been open competition; and that its failure was inevitable either from lack of capital or inefficient management or both. The court therefore concluded that petitioner had not sustained the burden of proving that the depreciation in value of its plant was due in any measurable degree to any violation of the Sherman Act by the respondents. But this conclusion rested upon inferences from facts within the exclusive province of the jury, and which could not be drawn by the court contrary to

> the verdict of the jury without usurping the functions of that fact finding body. Whether the unlawful acts of respondents or conditions apart from them constituted the proximate cause of the depreciation in value was a question, upon the evidence in this record, for the jury, 'to be determined as a fact, in view of the circumstances of fact attending it.' Milwaukee etc. Railway Co. v. Kellogg, 94 U.S. 469, 474, 24 L. Ed. 256. And the finding of the jury upon that question must be allowed to stand, unless all reasonable men, exercising an unprejudiced judgment, would draw an opposite conclusion from the facts." (282 U.S. 566-567.)

The *Story Parchment* factual situation is indistinguishable from the factual situation presented in the case at bar. In the *Story Parchment* case, as in the instant case, petitioner was the sole challenger to the monopolists. In the instant case, two monopolists conspired to maintain domination. In *Story Parchment* three monopolists conspired to maintain domination. In the instant case, the Court below conceded, for the purpose of its opinion, that respondents did in fact conspire to monopolize the industry. So did the Appellate Court in the *Story Parchment* case.

The *Story Parchment* decision by this Court stands for the proposition that appellate courts are in error when they fail to give effect to the intended effects of the conspiracy and the natural tendency which the acts committed pursuant to such illegal purpose have on competition.

We submit it is gross error under the *Story Parchment* case to refuse to allow the jury to determine whether or

not the acts of respondents, who had as their intention and purpose the elimination of all competitors, caused the elimination of petitioners.

Indeed, the legal presumption is that a conspiracy to eliminate competition continues until it succeeds. As stated by this Court in *United States v. Kissel*, 218 U.S. 601 (1910), at 607-608:

> ". . . A conspiracy to restrain or monopolize trade by improperly excluding a competitor from business contemplates that the conspirators will remain in business, and will continue their combined efforts to drive the competitor out until they succeed."

Under the holding of the *Story Parchment* case, the question of causation is a question of fact determinable by the trier of fact when a plaintiff proves a conspiracy to monopolize, a purpose and intention to eliminate him and his actual elimination from the industry after bona fide attempts to remain in the industry. In the case at bar, petitioners proved all these facts and more. In *Story Parchment* the defendants merely reduced prices; here there were affirmative, predatory acts of refusals to deal, of obstruction of sources of supply, of commercial interference with petitioner's manufacturing associates so as to disrupt petitioners' arrangements with these associates and thereby keep petitioners out of the industry, of a deliberate and successful elimination of petitioners from an existing and profitable export business.

2. The decision below is in direct conflict with Bigelow v. RKO Radio Pictures, 327 U.S. 251 (1946), which held that a wrongdoer may not object to a plaintiff's estimate of the cause of injury and its extent because it was not based on more accurate data when the wrongdoer's misconduct has rendered this information unavailable

In *Bigelow v. RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), this Court held that when there is proof of wrongful acts, their tendency to injure plaintiff's business and evidence of a decline in prices, profits or values not shown to be attributable to other causes, the jury alone is authorized to assess damages. In so holding, this Court made it abundantly clear that the wrongdoer could not object to a plaintiff's reasonable estimate of the cause of injury and its extent on the ground that it was not based on more accurate data.

In the *Bigelow* case, this Court held that a jury could conclude as a matter of just and reasonable inference from proof of defendant's wilful acts, their tendency to injure plaintiff's business and from evidence of a decline in prices, profits and values that defendant's wrongful acts had caused damage to plaintiff. This Court pointed out that the wrongdoer was in no position to complain of the award of extensive damages, since his own actions had prevented the fact finders from knowing what would have occurred but for the wrongdoing. We very respectfully submit that the *Bigelow* case was not based on whether or not there existed a loss inflicted by the defection of countless individual customers, as the lower Court claimed in the case at bar, but was a holding that the law asserts liability upon those who engage in activity in violation of Congressional mandates.

The holding in the *Bigelow* case that a jury may award damages based on relevant evidence after proof of lia-

bility was no different in principle than the law applicable to cases involving a marine collision in which the offending vessel has violated regulations prescribed by statute, confusion of goods cases, or trade mark or patent infringement cases where the wrongdoer is held to account for his profits. Once the wrong and harm are established by the doing of intentional acts and contact on the offended party, in all these cases, the *Bigelow* principles of causation and assessment of damages are applied.

Similarly, in this case there can be little question that the question of the cause of damage and its extent should have been a question for the jury under the *Bigelow* case. In *Bigelow* the "contact" was in terms of "natural tendency"; here they were direct and intentional.

The Court below relied on *Momand v. Universal Film Exchanges* (1 Cir. 1948), 172 F.2d 37, which affirmed 72 F.Supp. 469 (1947) and which was decided after this Court's opinion in *Bigelow*. However, the *Momand* case is really not a "causation" case. The *Momand* case involved the inability of a plaintiff, after a prior judgment, to separate damages from specific claims of a variety of restraints. (72 F.Supp. 478, 172 F.2d 37 at 43.) In that case, plaintiff had litigated the issues involved in twenty business practices in a prior suit. Only two were found to be illegal. In a subsequent case, the *Momand* Court held that the plaintiff could not "shotgun" the twenty practices in the subsequent action so as to claim damages from restraints that had already been held to be legal. Here there has been no finding that respondents' activities are in any way legal, and in fact, the lower Court *assumed* that they were *not* and that respondents were engaged in

an overall conspiracy to eliminate competition. Even the *Momand* case conceded that in such a situation "the usual rule of tort" is that a plaintiff may recover for loss to which defendant's wrongful conduct substantially contributed. In other words, even the *Momand* case did not feel that plaintiff had to assume any burden to show that defendant's activity was the sole cause. However, the Court below, in the case at bar, used the *Momand* case as authority that petitioners did not prove a cause of action because they did not prove that no alternative arrangements were possible. It then went a step further and held that the Court *as a matter of law* was to determine whether petitioners had failed to find alternative sources, which, under any theory, is purely a question of fact. Whether petitioners were injured by respondents' violations committed pursuant to a conspiracy to monopolize or by other causes which respondents alleged was strictly a question of fact for the jury.

It is respectfully urged that proof of "cause" is established upon the proof that respondents' unlawful activities had contact and impact on petitioners. If it is respondents' contention that "other factors" caused petitioners' injury, it is a question of fact for the jury to decide whether it was these "other factors" or respondents' antitrust violations that caused petitioners to be excluded.

Even ordinary negligence law does not aid respondents. Justice Cardozo made it clear in *Palsgraf v. Long Island Ry. Co.*, 248 N.Y. 339, 162 N.E. 99 (1928), that once the plaintiff is found to be in the area of foreseeable harm, any damages which occur to him as a result of defendants' negligence are compensable. The Court stated:

". . . We may assume, without deciding that negligence, not at large or in the abstract, but in relation to the plaintiff, would entail liability for any and all consequences however novel or extraordinary."

However we are not here concerned with a negligence case. In the instant case petitioners were the intended victim of *intentional* acts, of an intentional and a deliberate exclusionary conspiracy which accomplished the very results which the respondents intended and which Mr. Burwell stated was the "only reason" that respondents would not sell oxide to petitioners. (R. 547.)

Furthermore, even under the law of negligence, the question of causation is a question of fact for the trier of fact to determine.

As stated in Harper and James, *The Law of Torts*, Vol. 2, pp. 1118-1119:

"A distinction should be emphasized at this point. We are concerned here with the *sufficiency, not the weight* of the evidence, and on familiar principles plaintiff is entitled to have sufficiency tested on the basis of the evidence most favorable to him. It is only to that version of the evidence therefore that the equal probability test (of the legitimacy of an inference) may properly be applied. It is the jury's function, not the court's, to say whether plaintiff's version of the case is sustained by the greater weight of the evidence. A case therefore in which the evidence most favorable to plaintiff (including the opinion of qualified experts) affords the basis for an inference of cause is not defeated as a matter of law by defendant's evidence of a different version of facts or a different theory of cause in fact. Where the evidence stands in that posture, the question of what

> probably happened in the case is for the jury even though the court might be inclined to accept the defendant's version."

See also Restatement Torts §§ 430-434.

We respectfully submit that this Court's opinion in the *Bigelow* case has decided, similarly, that antitrust actions are to go to the jury on causal issues when a conflict is presented and that damages are to be awarded where a wrong has been done.

"Legal Cause" is a legal doctrine which lends itself to the most extreme form of judicial speculation so as to deprive a litigant of his right to have all factual issues determined by the trier of fact. The learned Court below cited Comment, 61 Yale L. J. 1010. But this Comment pointed out at 1019:

> "Since 'legal injury' criteria are court applied, they provide convenient means to circumvent the *Bigelow* rule requiring submission of the causal issues to the jury whenever there is a reasonable inference that the violation caused injury."

There is really no judicial problem of "cause" here. Respondents violated the antitrust laws. They intended to harm and exclude petitioners. Respondents' officers testified they intended to harm petitioners. Petitioners were in fact subjected to various forms of impact and harm and were excluded from the vanadium business. The decline of profits and values, resulting in the complete exclusion of petitioners from the vanadium industry, under the accepted damage principles as spelled out by this Court in the *Bigelow* case, entitles them to damages.

B

QUESTION 2

PETITIONERS, AGAINST WHOM A DIRECTED VERDICT WAS ORDERED BY THE APPELLATE COURT AS A MATTER OF LAW, WERE DEPRIVED OF A JURY TRIAL BY THE APPELLATE COURT BELOW WHICH, IN DIRECTING A VERDICT, WEIGHED THE EVIDENCE, MADE FACTUAL RULINGS ON THE SUFFICIENCY OF THE EVIDENCE OF CAUSATION, DID NOT VIEW THE EVIDENCE AS A WHOLE, DID NOT ALLOW PETITIONERS THE BENEFIT OF THEIR EVIDENCE, DID NOT ALLOW PETITIONERS THE BENEFIT OF ALL INFERENCES AND PRESUMPTIONS THAT COULD BE DRAWN FROM THE EVIDENCE AND DID NOT RESOLVE ALL CONFLICTS IN THE EVIDENCE IN FAVOR OF PETITIONERS, ALL IN DIRECT CONFLICT WITH RULES GOVERNING JUDICIAL REVIEW AND THE DECISIONS OF THIS COURT

A. Petitioners were entitled to a just and reasonable interpretation of the record

Not only does *Story Parchment Co. v. Paterson Parchment Paper Co., supra,* hold that causation in a Section 2 case of the type involved here and under the facts present in this case is a question of fact for the jury, but it also establishes without any doubt that the Court below made factual evaluations reserved only for the jury. Under *Story Parchment* the conclusion is inevitable that in the case at bar there was a conflict in the evidence on the issue of causation and that the petitioners were entitled to have this issue determined by the jury. The Court below actually weighed the evidence and made factual determinations on conflicts in the evidence. And in reaching these conclusions, it failed to resolve the factual conflicts in favor of petitioners, as it was required to do. This it did on a cold record. The trial Court which heard the evidence first hand from the witnesses' lips was of

the opinion sufficient evidence was present to submit the case to the jury and the case was submitted to the jury. There was such a grave departure from the rules of judicial or appellate review by the Court below in directing a verdict that petitioners were deprived of their constitutional right to a trial by jury. *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959); *Tennant v. Peoria & P. U. Ry. Co.*, 321 U.S. 29 (1944); *Lavender v. Kurn*, 327 U.S. 645 (1946); *Ellis v. Union Pac. R. Co.*, 329 U.S. 649 (1947); *Stone v. New York C. & St. L. R. Co.*, 344 U.S. 407 (1953); *Rogers v. Missouri Pacific Railroad Co.*, 352 U.S. 500 (1957); *Sentilles v. Inter-Caribbean Shipping Corp.*, 361 U.S. 107 (1959).

B. Only the trier of fact, the jury in this case, can draw inferences, determine the weight of the evidence, resolve conflicts in the evidence, determine the credibility of the witnesses. The Court below erred in not applying these traditional rules and in making these determinations itself as a matter of law

Respondents were entitled to a directed verdict only if on the evidence and the presumptions and the inferences that could reasonably be drawn from these facts, *considered in the light most favorable to petitioners*, reasonable men could not possibly have come to a contrary conclusion. Moore's Federal Practice, 2nd Ed., Rule 50, p. 2314, citing *North Pennsylvania R. Co. v. Commercial Nat. Bank*, 123 U.S. 727 (1887); *Delaware, L. & W. R. Co. v. Converse*, 139 U.S. 469 (1891); *Gunning v. Cooley*, 281 U.S. 90 (1930).

In *Gunning v. Cooley, supra*, at page 94, this Court stated:

> "Issues that depend on the credibility of witnesses, and the effect or weight of evidence, are to be decided by the jury. And in determining a motion of either party for a peremptory instruction, the court assumes that the evidence for the opposing party proves all that it reasonably may be found sufficient to establish, and that from such facts there should be drawn in favor of the latter all the inferences that fairly are deducible from them."

Appellate Courts are not to search the record to take cases away from the jury. *Tennant v. Peoria & P. U. Ry. Co.*, 321 U.S. 29 (1943); *Ellis v. Union Pacific Ry. Co.*, 329 U.S. 649 (1947); *Lavender v. Kurn*, 327 U.S. 645 (1946); *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931).

The limitations on the judiciary in granting directed verdicts or nonsuits preserves the Constitutional right to trial by jury. *Jacob v. City of New York*, 315 U.S. 752 (1942); *Stone v. New York, C. & St. L. R. Co.*, 344 U.S. 407 (1953); *Rogers v. Missouri Pacific Railroad Co.*, 352 U.S. 500 (1957); *Beacon Theatres, Inc. v. Westover*, 359 U.S. 500 (1959).

In the case of *Tennant v. Peoria & P. U. Ry. Co.*, 321 U.S. 29 (1943), Mr. Justice Murphy stated the present rule of this Court as follows:

> "It is not the function of a Court to search the record for conflicting circumstantial evidence in order to take the case away from the jury on a theory that the proof gives equal support to inconsistent and uncertain inferences. The focal point of judicial review is the reasonableness of the particular inference or conclusion drawn by the jury; it is the jury, not the

> Court, which is the fact-finding body. It weighs the contradictory evidence and inferences, judges the credibility of witnesses, receives expert instructions, and draws the ultimate conclusion as to the facts. The very essence of its function is to select from among conflicting inferences and conclusions, that which it considers most reasonable [citing cases] . . ."

The very essence of the jury is to select from conflicting inferences and conclusions that which it considers most reasonable. This right, whether it relates to negligence, causation or any other factual issue cannot be ignored. *Tennant v. Peoria & P. U. Ry. Co., supra*, at 321 U.S. 35; *Sentilles v. Inter-Caribbean Shipping Corp.*, 361 U.S. 107 (1959).

And in reaching these conclusions, the trier of fact looks at the evidence as a whole. As stated by the Sixth Circuit Court in *American Tobacco Co. v. United States* (6 Cir. 1944), 147 F.2d 93 at page 106:

> "At the outset, it may be remarked that the character and effect of a conspiracy are not to be judged by dismembering it and viewing its separate parts, but only by looking at it as a whole. *United States v. Patten*, 226 U.S. 525, 544, 33 S.Ct. 141, 57 L. Ed. 333; and in a case like the one before us, the duty of the jury was to look at the whole picture and not merely at the individual figures in it. *United States v. Pullman Co.*, D.C., 50 F.Supp. 123".

In *Stone v. New York, Chicago & St. Louis R. Co.*, 344 U.S. 407 (1953), this Court stated:

> "The fact that fair-minded men might likewise reach different conclusions on this branch of the case emphasizes the appropriateness of also leaving it to the jury."

C. The Court below failed to give judicial meaning and content to the violations of law committed by respondents and the natural tendency of these acts to injure. Instead the Court drew inferences against the petitioners so as to exact legal duties from them which are unwarranted in the law

The complaint filed herein and the trial made it abundantly clear that petitioners were complaining of a Section 2 conspiracy to monopolize case. Petitioners were not relying on a simple refusal to deal Section 1 case. They proved, *inter alia*, a combination to acquire control of vanadium oxide and ferrovanadium, to exclude competitors, to fix prices, to interfere with petitioners' suppliers and manufacturing associates, to use monopoly power to threaten reprisals against those competing with respondents, to cause exclusion of petitioners' exports to the Canadian market and to boycott petitioners.

In spite of this, the Court below ruled that it was incumbent on the petitioners to show that they requested vanadium oxide when they lost their manufacturing associates and that, when they did request supplies from respondents and were jointly refused, that they *sought* and exhausted every conceivable alternative source of supply.

But these requirements have no place in this action and they can only be imposed by the judiciary's failure to give full meaning to violations of the antitrust laws. Compare *W. W. Montague & Co. v. Lowry*, 193 U.S. 38, 47 (1904); *American Federation of Tobacco Growers v. Neal* (4th Cir. 1950), 183 F.2d 869; *Gamco, Inc. v. Providence Fruit & Produce Bldg.* (1 Cir. 1952), 194 F.2d 484.

Under the evidence in this case, petitioners were not required to make demands for vanadium oxide from

respondents, but could establish liability just by showing the deliberate destruction of their existing vanadium oxide suppliers, Loma Mill, Blanding Mines, Gateway or Nisley & Wilson, and North Continent Mines. Pursuant to respondents' conspiracy, as outlined in petitioners' statement of facts in this brief, bold and successful predatory means were taken by respondents to interfere with each of these suppliers so as to deprive petitioners of a steady and dependable source of oxide.

And even assuming this was not sufficient, petitioners could have rested on respondents' direct interference with petitioners in their dealings with Apex, Climax and Imperial.

In each instance the record herein showed shattering injurious impact. Apex was not obtaining sufficient quantities of oxide to run its mill at half capacity. (D's. V's. Ex. V-1-A; R. 2512A, 1142.) And just before termination of its relationship with petitioners, Apex was unable to obtain oxide supplies after repeated requests. (Pl. Ex. 144; R. 2266, 1313; Pl. Ex. 146; 2271-2275, R. 1320.) Apex capitulated just shortly after Blanding Mines informed it that Blanding could no longer furnish it with a supply of oxide which was necessary for production of vanadium for petitioners. (Pl. Ex. 131; R. 2239, 1242.) Respondents' exclusionary conspiracy left petitioners in June, 1942, without Apex Smelting and facing hostile monopoly powers. By June, 1942, only North Continent remained as a limited source of supply, a source which was hardly able to support the kind of manufacturing engaged in by respondents or attractive to others.

Further, it is elementary that the law does not demand a useless act and, accordingly, it certainly cannot establish a request to deal as a condition precedent to liability when the evidence shows conclusively that respondents consistently refused to supply petitioners, that such requests would have been futile and that a reasonable and prudent man would have known that it was useless to have sought the request from respondents after a series of *prior refusals*. "The law neither does nor requires idle acts."

But even assuming that requests for supplies were necessary, a just and reasonable interpretation of the record giving to the evidence all the necessary intendments, inferences and presumptions to which petitioners are entitled shows that requests were made at critical times in petitioners' relationships with their manufacturing associates when obtaining such supplies was urgent. (See R. 955-956; 1018; 1012-1013; 1302-1305.)

The Court below found that at the times petitioners claimed they were unable to obtain vanadium supplies from respondents, there was evidence that other sources were available to them. The Court was particularly concerned with the failure to buy certain Nisley & Wilson vanadium oxide in June of 1943, October, 1943 and January, 1944. However, the evidence proved that during 1943 Nisley & Wilson were under the control of USV, as agent for MRC. This agency relationship was used by respondents to channel Nisley & Wilson and their production into the hands of USV completely contrary to Mr. Nisley's desire. (R. 660.) In fact, this made it neces-

sary for petitioners to deal not with Nisley & Wilson, but with USV or MRC.

The supplies referred to in January, 1944, did not relate to oxide at all, but were raw ore. Mr. Nisley envisioned a plan for the conversion of the ore owned by MRC into oxide by Nisley & Wilson. However, Nisley & Wilson would have had to obtain the ore from MRC first, and USV was the agent for MRC.

Furthermore, the lower Court's demand that petitioners do business with Nisley & Wilson, in 1943 and 1944, in view of the evidence that the petitioners had done business with them in 1942, but that this business was deliberately thwarted by respondents is uncomprehensible and clearly places antitrust responsibility on the wrong foot. The respondents closed Nisley & Wilson in October, 1942, following the diversion of their ore supplies. (R. 658.) It was for the jury to determine what would have occurred but for the thwarting of the Nisley & Wilson Mill in 1942 and what impact this had on petitioners. The Court below has completely reversed the natural effect of violations of the antitrust laws into a condition precedent barring recovery from the wrongdoer. Petitioners were only required to show that a free and competitive market was converted into a monopoly market and that their substantial suppliers were thwarted or denied, *at opportune times*, so as to deny them steady, dependable sources of supply. (*Klor's, Inc. v. Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1959).)

It is one thing to demand that petitioners utilize oxide supplies from Nisley & Wilson in 1941 at a time when they were operating with Apex Smelting under an agree-

ment and could have used the oxide, but it is quite another thing to demand that petitioners make demands of Nisley & Wilson in 1943 after VCA had interfered with Apex so as to cause petitioners' manufacturing associate Apex to leave the vanadium business and cease to associate with petitioners. It is one thing for the Court to ask that petitioners succeed with a firm as important as Imperial Paper and Color in 1940 when conditions looked favorable and markets were available to petitioners. But it is quite another thing to ask that petitioners succeed with Imperial on the same basis in 1944, 1945, and 1946 when the respondents had deliberately destroyed the market, had deliberately destroyed all the independent vanadium oxide mills, had deliberately acquired the existing government plant "to keep control of the production of vanadium" (R. 246-247) and had made it clear that such acquisitions were notice to all of continuing monopolization. A conspirator cannot, under the antitrust laws, drive a competitor out of business, and after he has driven him out of business offer him lagniappe by making available to him supplies which are by this time useless to him as a result of the conspirator's wrongdoings. The failure of the Imperial venture proved the complete success of years of monopolization. The domestic sources of oxide supply denied to Imperial were denied by acts of the respondents, not by acts of the petitioners.

Not only did the Court below fail to give the petitioners the presumptions and inferences which were their due under the Sherman Act and rules of judicial review, but the Court below established rules which find no place in the judicial enforcement of antitrust liability.

D. Even assuming the correctness of the legal conclusions of the Court below, the opinion of the Court below conflicts with a just and reasonable interpretation of the record, for the evidence shows that by giving petitioners the benefit of all the inferences and presumptions to which the evidence entitled them and by resolving the factual conflicts in their favor, as required by the rules of judicial review, petitioners proved the very matters which the lower Court stated were not proved and upon which, so the lower Court stated, it was required to hold that there was no causal relationship as a matter of law between respondents' antitrust violations and petitioners' injury

But even assuming that the Court below was correct in establishing that, as a condition precedent to petitioners' recovery, they were required to make a constant demand for vanadium oxide and to exhaust every conceivable alternative source of supply, however chronologically remote those offers and sources were to the acts of impact and harm, petitioners in fact proved that they did make requests for oxide from respondents throughout the conspiracy's continuation and that they reasonably offered to do business with alternate sources. Petitioners further proved that respondents' refusals to deal occurred at strategic times when petitioners were attempting association with manufacturing concerns, needed the supplies to remain in the vanadium industry and that respondents' refusals to deal were the substantial factor in petitioners' failure to achieve successful entry into the vanadium business.

At the very least, under the applicable rules of judicial review, a factual conflict was presented on the issue of causation which was for the jury to determine.

1. Apex

As to the Apex contract, the Court below stated in its opinion:

> "We hold, under the cases cited pages 8-9, *supra*, that the failure of Apex or of Continental to try to buy oxide from the defendants during the final and most critical period in the life of the Apex contract made it impossible for the jury to find that defendants' refusals to deal caused Apex to terminate the arrangement with Brignoud. In regard to the Apex venture, the judgment below is affirmed." (R. 2576.)

In its opinion, the Court below stated that petitioners failed to make requests for supplies for a year prior to the time that lack of supplies caused Apex to end its relationship with petitioners and that this failure to make requests for supplies during the "final and most critical period of the Apex contract" made it impossible for the jury to find that respondents' refusal to deal caused Apex to terminate its business arrangement with petitioners.

But to the contrary, the evidence showed that Apex or petitioners did try to obtain supplies and that they tried to obtain them during the period of time that the Court below took it upon itself to establish as the "critical" period.

On or about January 27, 1942, petitioners were notified by Apex that it was discontinuing its relationship with them. (Df. V's Ex. 1-Y, R. 2519, 1173.) Production continued until June, 1942, by special agreement between petitioners and Apex because Apex was advised that petitioners had a binding agreement with Apex and petitioners were objecting strenuously to this breach of con-

tract by Apex. (Pl. Ex. 62, 168, 671; 675, 1334, 1945.) To stay in the vanadium business as long as they could by any means, petitioners got Apex to agree that Apex would at least for several months convert all the quantities of vanadic acid petitioners could obtain for Apex from Blanding, Nisley & Wilson and Shattuck. (Pl. Ex. 122, R. 2215, 1096.) Thus, the "critical" year would be from January, 1941, to January 27, 1942. It is uncontradicted that during this "critical" period, petitioners took various actions to obtain the supplies needed by them to allow them and Apex to remain in the vanadium business. See Table appearing at page 59 of this Brief for the numerous requests made by petitioners.

On July 7, 1941, petitioners requested that the Office of Production Management intervene in their behalf to secure supplies of oxide for them. (Pl. Ex. 132, R. 2265, 1245.) Union Carbide and VCA *both* declined to supply petitioners. (Pl. Ex. 132, R. 2265, 1245.)

Thus, petitioners first had asked for the oxide itself (Pl. Ex. 77, R. 176, 761), then that they at least be allowed to process the oxide for respondents (Pl. Ex. 77, R. 176, 761), and finally that the government intervene to acquire supplies for them, so serious did they consider the supply situation to be and so intent were they on remaining in the vanadium business. Yet, in every instance, petitioners were refused supplies.

From October to December, 1941, petitioners frantically attempted to obtain oxide. Having been turned down by respondents, petitioners centered their attention on obtaining acid from the Defense Plant Corporation Monticello Plant, which was under the administration of VCA. (Pl.

Ex. 144, R. 2266-2270, 1313; Pl. Ex. 146, R. 2270-2275, 1320.) On December 3, 1941, Apex requested the Defense Plant Corporation to sell them vanadium oxide from the Monticello Plant which was to be erected. (Id., R. 2266.) This request was suggested to Apex by Mr. Leir after petitioners learned that VCA was to construct the plant. (R. 2267.) Again on December 26, 1941, Apex wrote the Vanadium Division, Office of Production Management, seeking a source of oxide supply. (Pl. Ex. 146, R. 2270-2275, 1320.) These requests were made by Apex at the urging and insistence of Mr. Leir. (Pl. Ex. 146, R. 2270-2275, 1320.)

That Mr. Leir felt it was the better exercise of business judgment to attempt to get government aid in obtaining supplies which were denied him directly by respondents is obvious. He wrote:

> " . . . as far as we can see, the production of Ferro Vanadium has been mainly localized to two very big outfits in this country, and we think we are not asking too much if we apply to you for a better distribution of the available Vanadium Oxide, all the more as the Government is spending a lot of money for new production facilities and road construction out West." (Pl. Ex. 146, R. 2270-2275, 1320, at R. 2275.)

Thus, the evidence showed a request for supplies in June 14, 1941 (Pl. Ex. 77, R. 176, 761) and the desperate offer to mill ferrovanadium from oxide supplied by respondents. (Pl. Ex. 77, R. 176-177, 761; Pl. Ex. 132, R. 2261-2263, 1245.) The evidence showed that petitioners even requested the OPM to intervene for them and attempt to obtain vanadium supplies from respondents. (Pl. Ex. 132, R. 2265, 1245.)

It is also material to note that Apex demanded vanadium oxide supplies from the government and that just *one month* before Apex notified petitioners that they could no longer continue in the vanadium business Apex complained to the government of inadequate supplies. (Pl. Ex. 144, R. 2266-2270, 1313; Pl. Ex. 146, R. 2270-2275, 1320.) And, as previously noted in this Brief, on September 17, 1941, just *three months* before Apex notified petitioners that they could no longer stay in the vanadium business, Apex had complained to petitioners that they were not getting a sufficient quantity of oxide to run their production on half time. (Df. V's Ex. V-1-Q, R. 2512A, 1145.)

Also, in its opinion, the Court below stated that petitioners had obtained 16,000 pounds of vanadium oxide from Electromet Sales in July and August, 1939. (R. 2575.) However, the evidence did not show this at all. To the contrary, the evidence showed that petitioners could not get this oxide directly from respondents, but that they had to purchase it surreptitiously through an intermediary, a Mr. Poliakoff. (R. 1228, Df. U's Ex. U-5-L, R. 558-590, 1229.) Mr. Leir testified that Mr. Poliakoff "got the material which I could not get directly." (R. 1228.)

So, contrary to what the opinion of the lower Court stated the facts to be, the evidence showed a steady and determined joint refusal by respondents to sell to petitioners and to prevent petitioners from getting supplies from any source.

By February 16, 1942, petitioners had received assurances of governmental cooperation in obtaining additional

supplies of vanadic acid. (Df. V's Ex. 2-A, R. 603, 1176.) However, four days after this letter was written, VCA held the meeting with Apex which finally resulted in direct commercial arrangements between Apex and VCA for the purchase of aluminum ingots by VCA, which, in the circumstances and the evidence of this case, certainly permitted the inference to be drawn that the consideration for these arrangements was the discontinuation of the contract petitioners had with Apex. (Pl. Ex. 62, 168, 671; R. 672-676, 1335-1336, 1947-1949, 2144-2146.)

Therefore, the record shows numerous requests by petitioners to buy from respondents during the "critical" period before the notice of cancellation was sent by Apex to petitioners, deliberate refusals to deal with petitioners by respondents and bona fide attempts by petitioners to obtain oxide from other sources.

2. Climax

As to the *Climax* arrangement and petitioners' inability to manufacture ferrovanadium in 1943, the Court below stated:

> "Thus even if Continental and Climax were threatened with reprisals, the evidence does not reveal the result of such threats. On the basis of the evidence in the case, the threat of reprisal appears to be one directed against a corporation with which Continental had no business, since the nature and existence of the alleged "pending negotiations" are not shown by the record. Appellants have thus failed to show any injury resulting from the alleged threats. There must be an injury, together with a wrong and a causal connection between the two, before liability can result." (R. 2581.)

But such a conclusion can be drawn only by ignoring completely the direct testimony of Mr. Wolf, petitioners' Vice-President. Mr. Wolf specifically testified that petitioners lost Climax as an associate because of respondents' interference with Climax. (R. 978.) He also testified that respondents prevented the *continuance* of petitioners' existing relationship with Climax by their interference and threats of reprisals. He stated:

> "We had at that time lost as partners in this field Apex Smelting, who had previously manufactured ferrovanadium in conjunction with us as our partners. We had likewise lost Climax Corporation, who had done the same thing to us, and did not *continue* because of interference by the defendants with Climax." (R. 978, emphasis added.)

Mr. Wolf's testimony was substantiated by other evidence. For example, on May 21, 1943, petitioners requested that Electromet fill Continental's oxide requirements for *the remainder of the year.* (Df. V's Ex. U-4-M, R. 580-581, 955; R. 1018.) On that date, Mr. Wolf wrote to Electromet Sales:

> ". . . We are perfectly willing to sign a contract with you for our requirements until the end of the year. At present these requirements are estimated to amount to about 10,000 lbs. of V contained in pentoxide *per month.*" (Emphasis added.) (Df's Ex. U-4-M, R. 580, 955.)

Mr. Wolf testified that this request, made in the latter part of May, 1943, was specifically for a *continued* arrangement with Climax. He testified:

> "Q. Do you recall for which of these contracts you made that demand for the requirement contract?

A. Which of these——

Q. For which of either the Imperial or the Climax contract?

A. That was in June? No.

Q. June of '43?

A. *June of '43? That would have been probably for Climax, I would say.*

Q. Now then, you never did get the requirement contract?

A. No.

Q. In 1943, did you?

A. No." (R. 1018, emphasis added.)

Respondents rejected this request and denied petitioners any supply.

In other words, petitioners were requesting oxide for their Climax contract as late as June, 1943. But petitioners were unable to arrange for the manufacture of ferrovanadium with Climax or any other concern in 1943, 1944, 1945 and thereafter. As to Climax, it is undeniable that the offer of proof by petitioners was that Union Carbide told petitioners to stay away from Climax and that respondents threatened Climax with reprisals in order to disrupt petitioners' association with them and thereby prevent petitioners from remaining in the vanadium business. (R. 827-830.) Petitioners specifically testified that they lost Climax because of the interference by respondents with Climax. (R. 978.) Mr. Wolf testified that the request for oxide from Union Carbide in May, 1943, was to supply Climax with vanadium oxide. (Df. U's Ex. U-4-M, R. 580-581, 955; R. 1018.)

Thus, the lower Court's statement that the "earlier transaction stands alone in the record as the only con-

nection between Climax and Continental" is in error, as is its conclusion that the threat of reprisal was made to a corporation with which Continental had no business.

It is anomalous for the lower Court to say that petitioners had no "pending arrangements" with Climax when the "pending arrangements" were specifically disrupted by respondents' interference pursuant to their conspiracy to monopolize the industry and to discourage any competitor or any associate who entered any arrangement with the competitor

3. Imperial

As to the *Imperial* relationship and its failure the Court below stated:

> "Yet from the end of 1943 until 1946, when Electro Metallurgical Sales Corporation gave Continental a requirements contract for vanadium oxide, appellants made no move to obtain the allegedly necessary steady and uniform source of supply from any of the defendants. This is much like the Apex situation except that here there were no offers to buy during the entire life of Continental's arrangement with Imperial. Surely Continental cannot complain that the defendants did it wrong when it cannot show that it sought to alleviate its situation by seeking supplies from the defendants at any time during the life of the Imperial venture." (R. 2582-2587.)

But the evidence was to the contrary. The requests for supplies made by petitioners in November, 1943, only a month and a half before the signing of the Imperial contract, were for the *specific purpose* of supplying Imperial with vanadic acid for its manufacturing arrangement with

petitioners and for the proposed manufacture of ferrovanadium by Imperial. (R. 1012-1013.) At that time, petitioners "were trying to get a basis of raw materials for our negotiations for the forthcoming [Imperial] contract." (Id.) However, respondents uniformly refused to deal. (Pl. Ex. 40, R. 153, 269; Pl. Ex. 41, R. 154, 269; Pl. Ex. 42, R. 155-157, 270.)

4. Van-Ex Period and Nisley & Wilson

As to the Van-Ex situation and the alleged refusal of petitioners to acquire the Nisley & Wilson production, the Court stated:

> "We think this failure to deal with Nisley & Wilson during the Van-Ex period precludes Continental from arguing that defendants prevented the acquisition of raw materials at that time. As to Apex, appellants failed to show their inability to get oxide from defendants. With regard to Van-Ex they failed to show that it was impossible for them to obtain supplies from an independent producer." (R. 2579.)

But the evidence showed that Continental could not deal with Nisley & Wilson during this time. The evidence showed that respondents' conspiracy to monopolize shut down the Nisley & Wilson mill from October, 1942, to April, 1943. (R. 662-663.) Mr. Nisley himself testified that respondents caused him to cancel his relations with petitioners. (R. 658.) And when the mill was reopened in April, 1943, Nisley & Wilson were under the control of USV as agent for MRC. (Pl. Ex. 74, R. 2162-2168, 677.)

In March, 1943, MRC had turned down petitioners' request for oxide. (Df. U's Ex. U-4-C, R. 567, 940 and see R. 939.) In June, 1943 the petitioners on one occa-

sion turned down an MRC offer to supply petitioners with Nisley & Wilson production. (Df. Ex. U-3-Y, R. 928-929.) Mr. Wolf testified that he did not recall ever being offered the Nisley & Wilson production by MRC. (R. 926-927.) The oxide was refused in June, 1943 because petitioners were unable to use oxide that was not flaked. (R. 933.)

In October, 1943, Nisley & Wilson could not possibly have been offering vanadium oxide to petitioners because their production was completely under the control of USV, agent for MRC. (Df. U's Ex. U-5-J, R. 2471, 1208.) Nisley & Wilson and petitioners were merely exchanging ideas for future production plans when USV would not be controlling their production.

The opinion of the Court below is also in error in stating that Nisley & Wilson had on hand a stockpile of approximately 300,000 pounds of oxide which they tried to sell to petitioners in the Spring of 1944 and which petitioners refused to buy.

The evidence showed that Nisley & Wilson had closed their mill in January, 1944, as a direct result of respondents' activities. (R. 667-668.) Therefore, Mr. Nisley was not offering petitioners the production of his mill, which was not then even in operation. Mr. Nisley was merely suggesting that he process a stockpile of raw ore located at Gateway which did not belong to Nisley & Wilson but to MRC. (R. 732-734.) Nisley & Wilson's actual ability to obtain the stockpile was conjectural. However, in spite of this, the evidence showed that Mr. Leir stated that he would "give [Nisley] all possible cooperation". (Df. Ex. U-2-W, R. 733, 733.) The evidence was that Mr. Nisley was forced to terminate his production although he knew

that petitioners would buy all the material he could produce. (R. 667.)[30]

5. Petitioners' Canadian Business

As to the exclusion of petitioners from the Canadian market, the Court below had to concede that the evidence offered under petitioners' offer of proof was sufficient to sustain a finding that petitioners were damaged as a result of respondents' conspiracy. There was no question as to the causal relationship in this regard. However, the Court below side-stepped this injury to petitioners by holding that respondents' conduct with reference to the Canadian situation did not violate the antitrust laws under the authority of *Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc.*, 365 U.S. 127 (1961), which we submit is not controlling. We shall discuss this question in the next Section of our Brief.

---

[30]As has been indicated previously, Mr. Nisley filed an action in the United States District Court for District of Utah, Central Division, alleging that he and his mill were eliminated from the vanadium business as the result of the conspiracy to monopolize which is the subject of this action. A jury returned a verdict in his favor and found that respondents had conspired to eliminate him. The judgment entered on this verdict was recently affirmed by the Tenth Circuit in *Union Carbide and Carbon Corp. v. Nisley* (10th Cir. 1961) 1962 Trade Cases, Par. 70,222, page 75,805.

C

QUESTION 3

THE ANTITRUST LAWS PROTECT A BUSINESS INJURED BY UNITED STATES CORPORATIONS EVEN THOUGH PART OF THE MEANS USED TO ACCOMPLISH THE INJURY INVOLVES THE USE OF A PRIVATE WHOLLY OWNED FOREIGN SUBSIDIARY WHICH WAS GIVEN A DISCRETIONARY POWER BY AN AGENCY OF A FOREIGN GOVERNMENT WHEN THE MATTERS RELATE TO ORDINARY COMMERCIAL ACTIVITY

A. United States corporations are liable for conspiring to eliminate the foreign trade of a domestic competitor regardless of the means used. The fact that they use a governmental agency to accomplish this result does not immunize them

1. The elimination of petitioners' Canadian business was part of respondents' conspiracy to eliminate Petitioners from the vanadium industry

At the outset, it must be pointed out that this is not an action against the Canadian government and is not an action against the Office of Metals Controller of Canada. (R. 804; Pl. Ex. 93 for Id.; R. 451, 821.) It is simply an action against Union Carbide (and its American affiliate Electromet) and VCA, all American companies, for conspiring to violate the antitrust laws in furtherance of their own private gain. Part of respondents' conspiracy was effectuated by unlawfully using the wholly owned Canadian subsidiary of Union Carbide, which had been given the power in Canada to allocate and control the importation of vanadium into Canada, to eliminate petitioners from the Canadian market by refusing to allow them to make shipments to their Canadian customers.

It is petitioners' position that:

(1) Respondents were not immune from antitrust violations. They can point to no evidence giving either of them immunity from the antitrust laws.

(2) The fact that Electromet of Canada may have had an agency contract with the Office of Metals Controller to purchase and allocate vanadium certainly does not immunize its parent, Union Carbide, from conspiring with VCA to unlawfully use the agency to further their unlawful conspiracy.

(3) Even assuming that Union Carbide's activities while acting through its Canadian subsidiary were both immune and lawful, which they were not, Union Carbide conspired with the other respondent VCA to use the Canadian subsidiary to further their unlawful conspiracy at the expense of petitioners and the immunity, if any existed, certainly did not extend to these acts and to VCA.

Respondents, of course, cannot point to any evidence giving Union Carbide or VCA immunity from the antitrust laws for any of their acts. There is no evidence of a certificate of immunity from the government nor any evidence that one was ever sought. See *United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150 (1940); *United States v. Association of American Railroads* (1 D.C. Neb. 1954), 4 F.R.D. 510. The exclusion of petitioners from the Canadian market was part of an overall plan by respondents to conspire to monopolize the vanadium industry. Electromet of Canada, the wholly owned Canadian subsidiary of Union Carbide, was appointed by the Office of Metals Controller, an agency of the Canadian government, to act as its agent in purchasing vanadium for Canadian steel makers. Electromet of Canada was given authority to use its discretion in making purchases and was never authorized by the Canadian government,

or any of its agencies, to conspire with any other company to eliminate competition. It simply was to purchase and allocate. However, respondents, both American corporations, were engaged in a conspiracy to monopolize the vanadium industry, a part of which conspiracy was to eliminate petitioners. In furtherance of that basic conspiracy Electromet of Canada, wholly owned and completely dominated and controlled by Union Carbide, was ordered by its parent to allow into Canada only shipments of oxide from Union Carbide and VCA and to prevent and eliminate petitioners from selling their products to their Canadian customers, including Atlas Steel, Ltd. The power given to the Canadian subsidiary was used by respondents to further the basic conspiracy. Neither the Canadian government, nor its agency the Office of Metals Controller, is charged with any illegality in this case, and both were totally oblivious to the purpose for which the Canadian subsidiary refused to allocate to petitioners or their customers. (R. 831.) The elimination and the predatory tactics dictating the policy of the Canadian subsidiary which brought about the elimination of petitioners took place in the United States and was an arm of the American conspiracy.

2. Immunity from the antitrust laws will not be implied and even if granted it will be specifically limited to the exact conduct described

It has been long established that immunity from the antitrust laws will not be created by implication, but rather that there must be a specific grant of immunity. *United States v. Borden Co.* (1939), 308 U.S. 188; *Maryland & Virginia Milk Pro. Ass'n. v. United States* (1969), 362 U.S. 458; *United States v. Radio Corporation of*

America (1960), 358 U.S. 334. "We cannot believe that Congress intended to create so great a breach in historic remedies and sanctions." (*Ibid.*, 308 U.S. 188, 198.)

As stated in *United States v. Borden Co., supra*, "If Congress had desired to grant any further immunity, Congress doubtless would have said so." (p. 201.) And again in *United States v. Socony-Vacuum Oil Co.* (1940), 310 U.S. 150, "For Congress had specified the precise manner and method of securing immunity. None other would suffice." (310 U.S. 226-227.) Whenever Congress has desired to grant immunity, it has specifically stated so and has provided the machinery to invoke such immunity.[31]

Furthermore, when Congress has granted immunity, it has specifically limited the immunity to the *exact* conduct described and the Courts have so construed the grants of immunity. In *Atchison, Topeka & S. F. Ry. Co. v. Aircoach Transport. Ass'n.* (D.C. Cir. 1958), 253 F.2d 877, *cert. denied*, (1960) 80 S.Ct. 372, the Court held that even though the alleged conspirational agreements were within

[31]For example, see the following: Agricultural Adjustment Act of 1933, Sec. 8(2); 48 Stat. 34; as amended see 7 U.S.C. Sec. 608b; Agricultural Adjustment Act Amendment of 1935, Sec. 37; 49 Stat. 781; Capper-Volstead Act, Sec. 2; 42 Stat. 388; 7 U.S.C. Sec. 291; The Interstate Commerce Act, Sec. 5a; 62 Stat. 472; 49 U.S.C. Sec. 5b; Federal Aviation Act of 1958, Sec. 414; 72 Stat. 770; Communications Act of 1934, Section 313; 48 Stat. 1087; Webb Export Trade Associations Act, Section 2; 40 Stat. 517; Atomic Energy Act of 1954, Sec. 105; 68 Stat. 938, 42 U.S.C. Sec. 2135 (the Act of 1954 amends and supersedes that of 1946 which contained substantially similar provisions. Both Acts *specifically* provide for antitrust liability); Small Business Mobilization Act of June 11, 1942, Sec. 121; 56 Stat. 357; Small Business Act of 1958, Sec. 11; 72 Stat. 394; Defense Production Act of 1950, as amended, Sec. 708(b); 69 Stat. 581, 50 U.S.C. App. Sec. 2158.

the specific antitrust immunity section of the Interstate Commerce Act and although a certificate of immunity may have been obtained, these agreements nevertheless would be held to be violations of the antitrust laws if they were part of a plan or conspiracy to eliminate competition. Similarly, in *Maryland & Virginia Milk Pro. Ass'n. v. United States, supra*, the Court held that although section 6 of the Clayton Act exempted labor[32] and agricultural organizations from the antitrust laws, and although section 2 of the Capper-Volstead Act exempts agricultural associations from the antitrust laws, the full effect of these actions is that although a group of farmers acting together cannot be restrained:

> "'. . . from lawfully carrying out the *legitimate objects* thereof' (emphasis added), but the section cannot support the contention that it gives such an entity full freedom to engage in predatory trade practices at will. [cases cited]" (pp. 465-466):

And further (pp. 466-467):

> ". . . It does not suggest a congressional desire to vest cooperatives with unrestricted power to restrain trade or to achieve monopoly *by preying on independent producers, processors or dealers intent on carrying on their own business in their own legitimate way . . .*" (Emphasis added.)

So it is clear that Congress does not liberally grant antitrust exemptions and that even when immunity is

---

[32]That section 6 does not manifest "a congressional purpose wholly to exempt" labor unions from the antitrust laws, see *Allen Bradley Co. v. Local Union No. 3* (1945), 325 U.S. 797, 805; *Duplex Printing Press Co. v. Deering* (1921), 254 U.S. 443, 468-469.

granted, the immunity will not extend to acts beyond the legitimate objects of the conduct immunized.

B. A private corporation is not immune from the antitrust laws because it has an agency agreement with a foreign governmental agency if it unlawfully uses its agency powers to violate the antitrust laws

Private corporations such as Union Carbide and VCA are not immune from the antitrust laws if they conspire to violate the antitrust laws, and if, as part of that conspiracy, they unlawfully use an agency agreement which one of their wholly owned and controlled subsidiaries has with an agency of the Canadian government to eliminate competitors from the Canadian market. Private corporations which undertake, through subsidiaries or otherwise, to assume certain functions as agencies of the government are themselves responsible for their own tortious conduct when that conduct conflicts with the antitrust laws.

The Sherman Act is violated if parties to a conspiracy use foreign laws, regulations or corporations to further an illegal conspiracy to restrain United States trade. It is fundamental that the antitrust laws encompass acts of a private corporation even though it has been incorporated by direction of a foreign government, used as a governmental agent, and is partly owned by the government. *United States v. Deutsches Kalisyndikat Gesellschaft* (S.D. N.Y. 1929), 31 F.2d 199. In this case, the Court held that where private commercial activities are involved, a private corporation is subject to the antitrust laws even though it was formed by direction of a foreign government and proceeds from its operation go into the

public treasury. The Court further held that an antitrust suit against such a private corporation is not a suit against the sovereign and that a private corporation in which a government has an interest is not a department of the government. As to the claim by the private corporation of sovereign immunity because of its agency relationship, the Court held (p. 202):

> "Nor can immunity be claimed by the defendant corporation, or on its behalf, or by or on behalf of any of its officers, agents, or employees, on the ground that they are acting as agents of a foreign government. *An agent does not cease to be answerable personally for his illegal acts because he is an agent, even though he may be an instrumentality of government.* Sloan Shipyards Corp. v. U.S. Shipping Board Emergency Fleet Corp., 258 U.S. 549, 567, 42 S. Ct. 386, 66 L. Ed. 762. Officers and agents of a corporation are not officers or agents of its stockholders (U.S. v. Strang, supra), and it therefore cannot be successfully urged that an action against an officer or agent of a corporation in which a sovereign state is a stockholder is in fact an action against the sovereign state." (Emphasis added.)

As was stated by this Court in *United States v. Sisal Sales Corporation*, 274 U.S. 268 (1927) (p. 276):

> "Here we have a contract, combination, and conspiracy entered into by parties within the United States and made effective by acts done therein. The fundamental object was control of both importation and sale of sisal and complete monopoly of both internal and external trade and commerce therein. The United States complain of a violation of their laws within their own territory by parties subject to their

jurisdiction, not merely of something done by another government at the instigation of private parties. True, the conspirators were aided by discriminating legislation, but by their own deliberate acts, here and elsewhere, they brought about forbidden results within the United States. They are within the jurisdiction of our courts and may be punished for offenses against our laws."

In *United States v. R. P. Oldham Company* (N.D. Cal. 1957), 152 F.Supp. 818, which involved an alleged conspiracy in the importation of Japanese nails, the Court stated (p. 821):

> "At the outset, it should be made clear that there is no attempt here to regulate Japanese commerce as such . . . Japanese firms and activities in Japan are considered only in so far as they relate to the precise charge, against American defendants, of a conspiracy in restraint of trade in the importation and sale of wire nails on the West Coast of the United States. Under the circumstances, it is absurd to say that principles of international law and comity of nations put the charges of this indictment within the exclusive jurisdiction of the Japanese Courts, or require that Japanese law be applied."

See also: *United States v. Aluminum Co. of America* (2 Cir. 1945), 148 F.2d 416; *United States v. American Tobacco Co.*, 221 U.S. 106 (1911); *In Re Grand Jury Investigation of the Shipping Industry* (D.C., 1960), 186 F.Supp. 298, 319; *Brady v. Roosevelt Steamship Co.*, 317 U.S. 575 (1943); *Keifer & Keifer v. Reconstruction Finance Corp.*, 306 U.S. 381 (1939).

C. Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc., 365 U.S. 127 (1961) does not apply to the exclusion of competition accomplished under and pursuant to the terms of a conspiracy to monopolize an industry by predatory business tactics, even though part of the conspiracy included the use of one of the co-conspirator's subsidiaries which had been given the power to allocate vanadium by an agency of the Canadian Government

The citation by the Court below to *Eastern Railroad Pres. Conf. v. Noerr Motor Frgt., Inc.*, 365 U.S. 127 (1961) to support the proposition that the Canadian situation involved in this case and described above does not violate the Sherman Act is erroneous.

The *Noerr* decision, it is respectfully submitted, is a narrow and specific holding that the Sherman Act does not control joint action to lobby or to influence the passage of legislation, although, even in this field, this Court concedes "There may be situations in which a publicity campaign, ostensibly directed toward influencing governmental action, is a mere sham to cover what is actually nothing more than an attempt to interfere directly with the business relationships of competitor and the application of the Sherman Act would be justified." (365 U.S. 144.) It is clear that the purpose and objective in the *Noerr* conspiracy was to associate and bring about forceful lobbying campaigns for the advantage of the lobbying group. The Canadian market arrangement in the instant case was a strict and classic market division agreement under which Union Carbide instructed its Canadian subsidiary to allocate vanadium imports only to Union Carbide and VCA, to eliminate petitioners from the Canadian field, to take away petitioners' Canadian customers, and to allo-

cate those customers between VCA and Union Carbide. (R. 828.) This traditional, predatory conduct has always been held to violate the Sherman Act in spite of claims of government approval.

In *Atchison, Topeka & S.F. Ry. Co. v. Aircoach Transport Ass'n, supra,* the complainant alleged defendants negotiated special rates with the military agencies of the government for the transportation of personnel by overall contracts in violation of the antitrust laws. Defendants claimed the rates fixed were fixed pursuant to the Interstate Commerce Act, that said Act specifically provided that such agreements were immune from the antitrust laws if approved by the I.C.C., and that such agreements were so approved and hence immune. The Court held that even though it should be found that the agreements were within the immunity section and an antitrust immunity certificate obtained, they nevertheless would be held as violations of the antitrust laws *if the agreements were part of a plan of the defendants in combining or conspiring to eliminate the competition of plaintiffs.* The Court held (p. 887):

> "*Even though it should be found in the end that the practices as such have been validly immunized by section 5a approved agreements, nevertheless, if they are part of an effort by Railroads in combination or conspiracy to eliminate the competition of Aircoach,* rather than used merely to meet that competition, *the practices would be removed from the protection of section 5a(9).* We do not think the Act or any agreement which has been approved under it can be construed as authorizing the use of such practices

for the purpose of eliminating the competition of Aircoach for the section 22 transportation involved. [Cases cited.]" (Emphasis added.)

In *State of Georgia v. Pennsylvania R. Co.*, 324 U.S. 439 (1945), defendants contended, in answer to a charge that they had fixed rates in violation of the antitrust laws, that the ICC had actually approved the rates under the ICC Act standards. This Court held that even though rates were cleared by the ICC, the antitrust laws were violated if the rates fixed, although reasonable and nondiscriminatory, were restrictive rather than competitive.

This same problem was presented in *United States v. Socony-Vacuum Oil Co.*, 310 U.S. 150 (1940). Among the numerous defendants indicted and found guilty of conspiring to fix the price of gasoline in violation of the antitrust laws was one C. E. Arnott, Vice-President of the defendant Socony-Vacuum. By Congressional authority and administrative appointment, Arnott was appointed chairman of the Planning and Coordination Committee's Marketing Committee, and requested to take action to restore markets to their normal condition. (p. 175.) Sections 3(a) and 5 of the NIRA Act permitted issuance of antitrust immunity certificates. It was admitted by defendants, including Arnott, that they did not obtain such certificates and hence were not immune from the antitrust laws. Defendants offered to prove governmental approval of Arnott's activities to show the purpose, effect, and reasonableness of the activities under the program. The Court rejected this and held that since immunity was *not* given, the defendants were responsible

even though acting as agents. The Court stated (pp. 225-227):

> "As to knowledge or acquiescence of officers of the Federal government little need be said. The fact that Congress through utilization of the precise methods here employed could seek to reach the same objectives sought by respondents does not mean that respondents or any other group may do so without specific Congressional authority. Admittedly no approval of the buying programs was obtained under the National Industrial Recovery Act prior to its termination on June 16, 1935, (sec. 2(c)) which would give immunity to respondents from prosecution under the Sherman Act. Though employees of the government may have known of those programs and winked at them or tacitly approved them, no immunity would have thereby been obtained. For Congress had specified the precise manner and method of securing immunity. None other would suffice."

The Court went on to say (pp. 227-228) that the fact that the buying programs may have been consistent with the general objectives and ends of the NIRA is likewise irrelevant to the legality under the Sherman Act of defendants' activities while the act was in effect, since price fixing combinations which lack Congressional sanction are illegal per se.

That a person cannot use lawful activity in an unlawful manner for an unlawful purpose and for an unlawful end and still have antitrust immunity was again reiterated in *Maryland & Virginia Milk Pro. Ass'n v. United States*, *supra*. The Court stated (pp. 466-467):

> ". . . [the Capper-Volstead Act] does not suggest a congressional desire to vest cooperatives with unrestricted power to restrain trade or to achieve monopoly by preying on independent producers, processors or dealers intent on carrying on their own businesses in their own legitimate way."

The Court held the conduct complained of constituted anti-competitive activities so far outside the "legitimate objects" of a cooperative that, if proved, it would constitute a clear violation of Section 2 of the Sherman Act.

In the same way, the fact that Electromet of Canada had an agency agreement with an agency of the Canadian government is basically immaterial when it is proved that the corporation was under the complete domination and control of Union Carbide and that the agency relationship was used by Union Carbide and VCA to further their monopoly and conspiracy to control the American vanadium industry and, in furtherance of said conspiracy, to eliminate petitioners' Canadian business and thereby destroy them as a competitor to respondents in the American market.

To the same effect are: *Kobe, Inc. v. Dempsey Pump Co.* (10 Cir. 1952), 198 F.2d 416, *cert. denied* 344 U.S. 837 (1952); *Bankers Life and Casualty Company v. Larson* (5 Cir. 1958), 257 F.2d 377; *Floyd v. Gage* (4 Cir. 1951), 192 F.2d 137; *Crummer Co. v. Du Pont* (5 Cir. 1955), 223 F.2d 238, *cert. denied* 350 U.S. 848.

Legal means may not be used to accomplish an illegal objective. (*American Tobacco Co. v. United States*, 328 U.S. 781 (1946); *Kobe, Inc. v. Dempsey Pump Co.*, supra;

United States v. Socony-Vacuum Oil Co., supra.) And if a combination or conspiracy taken as a whole violates the antitrust laws, it is not purged of its unlawfulness just because part of it may be valid. *United States v. Bausch & Lomb Optical Co.*, 321 U.S. 707 (1944); *American Tobacco Co. v. United States* (6 Cir. 1944), 147 F.2d 93; *Aikens v. Wisconsin*, 195 U.S. 194 (1904).

The recent decisions of the Circuit Court of Appeals for the Tenth Circuit in *Union Carbide and Carbon Corporation, et al. v. Howard Balsley, et al.* (Civil Action No. 6321) and *Union Carbide and Carbon Corporation v. Frank Nisley* (Civil Action No. 6319), (10 Cir. 1961) 1962 Trade Cases, Par. 70,222, page 75,805, involved these same defendants, this same industry, and the same overall conspiracy alleged in the case at bar. The Court of Appeals affirmed the implicit findings in the jury verdict that an overall conspiracy to take over every phase of the vanadium industry existed and caused injury to the plaintiffs. In the *Nisley* case, the plaintiff, as the respondents in the case at bar, was an independent miller who was put out of business by the acts of these defendants. In both cases, the defendants raised as a partial defense the fact that defendant Union Carbide had certain agency relationships with the government and hence those activities were immune. The court on appeal rejected this contention and held that there was nothing in the agency agreements which justified the interference that the government intended to transgress the antitrust laws and that there was no authority in the agreements to fix prices, restrain trade or achieve a monopoly in the vanadium industry by combining with its competitor, VCA. (1962 Trade Cases, Par.

70,222, page 75,816.) In the *Nisley* case, the court stated further, at page 75,830:

> "What we said in that respect Balsley is apposite here, and we may add that it is one thing to incite or influence government action which results in monopolistic practices as in Eastern R. Conf. v. Noerr Motors, 365 U.S. 127. It is quite another thing to utilize, or attempt to utilize, governmental powers conferred upon a private agency such as USV (Union Carbide) for unintended and illegal ends."

One last observation: granted the all-embracing conspiracy to restrain and to monopolize and the actual monopolization of the vanadium industry in all its phases —how better maintain that monopolization during times of stress which promise alleviation to its victims in the form of new competitive factors, than by the use of governmental relationships (acquired by the monopolist for legitimate ends) to destroy or to neutralize those new competitive forces? The Canadian subsidiary was just the weapon required to maintain the monopoly in Canada and to deprive petitioners of an important market during the war. The temptation to use the governmental agency acquired by that Canadian subsidiary to further the monopoly proved too great for these respondents.

CONCLUSION

For the foregoing reasons petitioners respectfully urge that the Court reverse the judgment entered herein and remand the action to the District Court for retrial.

Dated, March 1, 1962.

Respectfully submitted,

JOSEPH L. ALIOTO,
MAXWELL KEITH,
RICHARD SAVERI,
G. JOSEPH BERTAIN, JR.,
Attorneys for Petitioners.

Of Counsel.

(Appendix A Follows.)

Appendix A

During the trial, the trial Court did the following:

(a) Rejected as inadmissible all evidence and testimony offered by the petitioners to show the terms, origins, nature, purpose and scope of the conspiracy and combination of the respondents from 1933, the year in which appellants alleged the conspiracy was formed, to 1938, on the grounds that petitioner entered this country in 1938 (R. 112-113, 118-119; Offer of Proof, R. 308-327; 422-434; 151-152, 194; 256-268; 601-603; 1985-1986);

(b) Rejected all evidence pertaining to respondents' suppression of petitioners' Canadian business as part of their overall conspiracy and the exclusion of petitioners from Canadian Markets (R. 801-808; 831-838; Offer of Proof, R. 801-840);

(c) Rejected as inadmissible evidence that respondent Union Carbide informed petitioners that they had no business in the vanadium industry, threatened petitioners to stay away from Climax Molybdenum Co., a manufacturing associate of petitioners which produced petitioners' product, or reprisals would be taken against Climax (R. 813-818; 826-834; 845-851; 1008-1012);

(d) Excluded evidence offered by petitioners as to their overall business success and their ability to succeed in other allied fields of ores, minerals and alloys (Pl. Ex. 121 for Id.; R. 469; 1087; Pl. Ex. 123 for Id.; R. 536, 1097; Pl. Ex. 124 for Id.; 537, 1103; Pl. Ex. 125 for Id.; R. 539, 1106; Pl. Ex. 126 for Id.; R. 541; 1106; Pl. Ex. 139-141 for Id., R. 543-545, 1260-1264);

(e) Persistently told the jury that activities in prima facie violation of the antitrust laws were "good business judgment", a "good proposition", and not "improper". (R. 209, 245, 246, 558, 561, 586.) In effect, these statements amounted to an instruction to the jury that good business judgment was an absolute defense to Sherman Act violations. (R. 1909-1910; 245, 246, 255, 256, 561, 563, 586, 611, 869, 1647, 1709, 1833.) This error was magnified in its instructions, when the Court told the jury that ". . . You cannot find that the defendants entered into an unlawful agreement or conspiracy because you disagree with their business judgment." (R. 2029.) The trial Court failed to qualify its instructions on individual business judgment (R. 2028-2029);

(f) Instructed the jury on the public injury doctrine specifically rejected by this Court in *Klor's, Inc. v. Broadway-Hale Stores*, 359 U.S. 207 (1959); *Radiant Burners, Inc. v. Peoples Gas Light and Coke Co.*, 364 U.S. 656 (1961). (R. 2035-2036.) In fact, the "public injury" instruction offered by respondents and given by the trial Court specifically cited the Ninth Circuit *Klor's* decision which this Court unanimously overruled;

(g) Erroneously instructed the jury that any acts of the respondents as agents of the Government, American or Canadian, could not be considered by the jury as part of the illegal agreement, plan or monopolization herein involved (R. 2033);

(h) Required petitioners to prove damages to a reasonable certainty and to prove that, but for the conspiracy, petitioners would have had vanadium products to sell and would have sold them at a profit. (R. 2032.) In so

doing the trial Court in complete seriousness stated "But somebody has to start reversing the Supreme Court" (R. 2011);[33]

(i) Refused to instruct the jury that a conspiracy to refuse to deal was per se illegal (R. 2031);

(j) Repeatedly questioned the materiality and import of petitioners' evidence (R. 221, 249, 325, 599, 751, 753, 1323, 1324, 1581, 1603, 1621, 1644, 1646, 1656, 1801, 1909-1911, 1924, 1979, 1984), and, to petitioners' prejudice, continuously minimized and questioned the weight and credibility of petitioners' evidence and witnesses. (R. 560, 561, 1413-1414, 1422, 1581, 1804, 1904, 1910, 1962-1963.) By its unwarranted interference in these respects, the trial Court prevented petitioners from making a full, orderly and fair presentation of their case, and gave the jury an impression that their decision should be for respondents;

(k) Permitted counsel for respondent VCA to inform the jury in his opening statement that these same respondents had been acquitted in a prior government suit based on these same facts. (R. 111.)

---

[33]"Mr. Alioto. I would suggest this, if your Honor please; it has been done in other cases, and we have done it pretty usually in our proposed instructions: Just take that instruction from the *Bigelow* case and give it directly and verbatim. No one can object to the language of Justice Stone . . . The Court. Yes. But somebody has to start reversing the Supreme Court. (R. 2011.)"

Summary of Argument 44

ARGUMENT 48

QUESTION 1

Proof of a causal connection between respondents' alleged antitrust violations and the alleged failure of petitioners' vanadium business ventures was an essential element of petitioners' cause of action. Without such proof there was no issue for the jury 48

A. It Has Been Consistently Held That a Plaintiff in a Private Action Must Prove a Causal Connection Between His Losses and Defendant's Antitrust Violations 50

B. Nothing in *Eastman Kodak*, *Story Parchment* or *Bigelow* Dispenses With Proof of Causal Connection or Bars a Directed Verdict in the Absence of Proof of Such Connection 54

QUESTION 2

The evidence of causal connection was insufficient to support a verdict for petitioners. The Court of Appeals therefore properly affirmed the judgment entered on the jury's verdict for respondents 61

A. The Sufficiency of the Evidence Is Always a Question of Law 64

B. The Evidence Was Palpably Insufficient to Support a Verdict for Petitioners 65

QUESTION 3

Evidence of the acts of a Union Carbide subsidiary as an agent of the Canadian Government was properly excluded 70

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

BRIEF FOR RESPONDENT VANADIUM CORPORATION OF AMERICA

Questions Presented

This Court limited this appeal to three questions. Its order set forth those questions as posed in the petition for certiorari (R. 2584-2586; Pet. Br., pp. 4-5).[1] But the

---

[1] All "R." references are to pages of the printed Transcript of Record, which consists of nine volumes. Volumes VI and VII contain the exhibits printed in the court below; Volume VII also

language used by petitioners in framing these questions, and the inclusion in their statement of the case of much that is not material to the consideration of these questions, present a distorted picture of the posture of the case as it comes to this Court and of the limited nature of the issues here to be decided.

The basic question, simply stated, is whether the proof proffered by petitioners was sufficient rationally to permit a finding that they had in fact been injured in their business by acts of the respondents forbidden by the antitrust laws.

Statement of the Case

1. *Introduction*

Petitioners, suing for treble damages under section 4 of the Clayton Act, had to prove that they were "injured in [their] business or property by reason of" something forbidden in the antitrust laws (15 U. S. C. §15; Pet. Br., p. 3). Their complaint therefore alleged, whatever may be petitioners' theory now, that they were eliminated "from the industry of independent producers and distributors of ferro-vanadium and vanadium oxide" as "one of the direct effects proximately caused" by respondents' alleged mo-

---

includes the opinion and orders of the court below and the order allowing certiorari (R. 2565-2586). Volumes VIII and IX contain the additional exhibits printed in this Court.

All references to exhibits are followed by the pages of the Record at which the exhibit appears and at which it was offered in evidence. Where the exhibit appears in Volume VIII or IX, the volume is also included.

All references to "Pet. Br." are to pages of "Petitioners' Opening Brief" in this Court.

All italics in this brief are ours unless otherwise indicated.

nopolistic practices (R. 16, par. 30; see also R. 23-24, par. 45).[2]

A jury, after a three week trial, returned a general verdict for respondents. Petitioners appealed from the judgment entered on that verdict, contending it was the product of varied errors committed in the course of trial.

The Court of Appeals considered only whether petitioners had supported their essential allegations of proximate cause—"Our problem is to determine whether or not the evidence could have justified jury findings that [respondents'] alleged illegal acts were in fact the cause of [petitioners'] failure in various adventures into the business" (R. 2572). Concluding the evidence could not support such findings, the Court of Appeals affirmed the judgment for respondents (R. 2572-2573, 2583).

The three questions on which certiorari has been granted relate only to whether the record—including certain evidence petitioners offered, if admissible—could support a finding of the necessary causal connection between respondents' alleged wrongdoing and petitioners' alleged loss. It is therefore unnecessary in this counter-statement to correct petitioners' varied misrepresentations of the evidence on questions not before this Court (Rule 40(c)).

But it should be emphasized at the outset that the trial court and the Court of Appeals took nothing away from the jury, nor did the Court of Appeals order a directed

---

[2] The same monopolistic practices were alleged in an indictment returned against respondents and others in June 1946 by a Federal Grand Jury at Denver, Colorado, which was later dismissed by the Government and superseded by a criminal information filed on September 2, 1948, entitled *United States* v. *Union Carbide and Carbon Corporation, et al.*, No. 11678, in the District Court for the District of Colorado (R. 22, pars. 41-42). After a full trial the criminal action was terminated by a jury acquittal of all defendants on June 4, 1957. No civil suit was brought by the Government at any time.

verdict against petitioners, despite petitioners' suggestions in Questions 1 and 3 (Pet. Br., pp. 4-5). The case had been submitted to the jury and the jury returned a general verdict for respondents (R. 2051).

Nor does the submission of the case to the jury indicate, as petitioners argue, that "the trial judge thought that the evidence presented a factual jury issue" (Pet. Br., pp. 67, 91-92). The trial judge had reserved decision on respondents' motion for a directed verdict (R. 1989). When the jury returned its verdict for respondents, he unmistakably expressed his concurrence with it (R. 2052). It may be, of course, that he personally disbelieved the testimony of Blair Burwell, the patently disgruntled former vice-president of one of the Union Carbide subsidiaries, on whom petitioners rely so heavily and who alone in the entire record supposedly "admitted" and "confessed" the destruction of petitioners to be "an important goal of the monopolists" (Pet. Br., pp. 4, 68).[3] Perhaps the trial judge agreed with the jury because he saw no sufficient evidence of conspiracy or for a number of other reasons. But, with his reservation of decision on the motions for a directed verdict, nothing supports petitioners' inference that he thought they had presented a jury question on the causation issue.

---

[3] Petitioners have evidently found it convenient to use the collective "respondents," without distinguishing between those in the Union Carbide group and the independent Vanadium Corporation of America. The result is frequently misleading.

Thus petitioners refer to "a confession by one of respondents' Chief Executive Officers" (Pet. Br., p. 18). This alleged confession came from the same Blair Burwell. The record shows only that he had been a vice-president of United States Vanadium Corporation, one of Union Carbide's subsidiaries, and the assistant to the vice-president in charge of its mining operations (R. 137).

Of course, there was no admission at all. Burwell, at the time of trial, was not connected with any respondent, and never had been a director, officer or employee—much less one of the chief executive officers—of Vanadium Corporation of America.

So too the questions on which certiorari has been granted make it unnecessary to consider the sufficiency of the evidence of respondents' alleged violations of the Sherman Act (Pet. Br., pp. 14-36). But nothing supports petitioners' further claim, in Question 1, that this alleged monopoly was "admittedly achieved pursuant to an intent to monopolize" or that the "question of violation is confessed" (Pet. Br., p. 4; see also, *e.g.*, pp. 16, 18, 68, 69, 74, 78). Indeed, all respondents bitterly contested these charges of violation and, as the Court of Appeals noted, challenged the sufficiency of petitioners' evidence on this issue (R. 2572).[4]

The Court of Appeals did not find evidence of violation; it merely "*assumed*" that such evidence was adequate, without discussion, because it had concluded that the judgment clearly had to be affirmed by reason of a fatal failure of proof of causal connection. In short, no violation of the statute was confessed or admitted by any respondent or, in view of the jury's verdict, proved against it.[5]

Similarly immaterial here are the numerous and varied other alleged errors in the conduct of the trial and the charge to the jury which petitioners specified in the Court of Appeals, some of which they repeat here (Pet. Br., p. 67, App. A). The Court of Appeals could have con-

---

[4] As noted below, petitioners' business was the purchase and sale of vanadium oxide or the conversion of such oxide into ferrovanadium. But there was no proof that petitioners did not have adequate supplies or that additional supplies were not available to them (*infra*, pp. 8-10, 29-42).

[5] Petitioners' Question 1 also argues that "the issue of measurement of damages is more than sufficiently supported by relevant economic data" (Pet. Br., p. 4).

Here too, as the Court of Appeals noted, respondents challenged the sufficiency of the evidence (R. 2572). Here again its sufficiency was *assumed*, without discussion, by the Court of Appeals because of the affirmance of the judgment below on another ground (R. 2572).

sidered each in turn, found them baseless or harmless and affirmed the judgment for respondents. Instead it found such consideration unnecessary, again because the judgment had to be affirmed for failure of proof of causation (R. 2576, 2579, 2581, 2582-2583).

The basic question, therefore, is whether the Court of Appeals was correct in its disposition of the appeal. Its opinion reflects a meticulous detailed review of the evidence—looking "not only at all the evidence admitted by the trial judge, but also at all the evidence offered by [petitioners] but excluded below" (R. 2572). We submit that the record, viewed most favorably to petitioners, permits only the conclusion below that the evidence was insufficient to justify a verdict that the "necessary causal relation existed" between the alleged illegal acts and petitioners' failure (R. 2572-2573), and that that conclusion permitted no result except affirmance of the judgment for respondents entered on the jury's verdict (R. 2583).

2. *The Vanadium Industry*

Vanadium is a metallic element found domestically, in the same ores as is uranium, in a four-state area known as the Colorado Plateau (R. 7-8, Comp. pars. 12, 14 not denied; R. 139-140). The ores are first mined and then milled into vanadium oxide at mills near the ore deposits, on the Colorado Plateau (R. 1826-1827; Ex. 6, R. 2069-2071, 115; Ex. 7, R. 2072, 116). The oxide is then converted, in electric furnaces or through an aluminothermic process at plants in the East, into ferrovanadium (*Ibid.;* R. 1827-1828).

Ferrovanadium, the finished product, is an alloy used to harden steel and the steel companies are the major customers for it (R. 7, Comp. pars. 12, 13 not denied; R. 1525-1529; R. 1824-1825). When added to steel, as peti-

tioners admit, ferrovanadium increases the strength of the steel and provides toughness necessary for use in the manufacture of high speed tools, machine and automobile parts and armor plate (Pet. Br., p. 6, note).

Vanadium was a declining industry before World War II because of competition from molybdenum and other cheaper alloys (R. 146, 155, 157, 1528, 1682). Respondents made major efforts to find new uses for vanadium (R. 153, 1689, 1823-1826). Sales, not production, was the problem.

The industry was easy to enter. The ore was plentiful (R. 139, 1553). As petitioners conceded, anyone could find it, mine it and mill it (R. 1199). In 1938, when petitioner Leir came to this country, a plant could be built for about $50,000 to produce 15,000 pounds of vanadium oxide a month (R. 210). But, as petitioners soon discovered, anyone could simply buy vanadium oxide already milled and either sell it or make ferrovanadium at will.

The early stages of the war, however, produced a sudden spurt in demand, principally for weapons (R. 160, 189-190, 1526). The domestic surplus found a profitable market abroad (R. 1233-1234), but the conditions which led to increased demands also resulted in Government restrictions within a very short time.

In July 1940 vanadium was subjected to an embargo on exports (R. 1234). Even before the United States entered the war, there were priority allocations on vanadium as a strategic material, and later price regulation of vanadium oxide and ferrovanadium under the O.P.A. (Ex. U-5-P, R. 1367-1368; Ex. V-2-P, R. 1865-1867; Ex. U-5-O, R. 1363-1367; Ex. U-5-C, R. 985-986; 7 F.R. 4698; 7 F.R. 10934; 8 F.R. 17511; 10 F.R. 10429; Ex. V-2-M, R. 2555-2564, 1727-1728; Ex. U-5-D, R. 2462-2466, 987). Respondents were asked to increase their production substantially and quickly

(*infra*, p. 11). As petitioners' witness Burwell said of the 1941-1942 period, "and then the war hit us. And now we had a situation that was entirely different develop. For the first time there was no matter or question of who was your customer. Uncle Sam needed the vanadium" (R. 160).

In 1942 Metals Reserve Company, a Government corporation, started to buy up all the vanadium ore it could get in an effort to conserve it for war needs; prices went up and the supply tightened. Through ownership of mills and agreements with mill owners, Metals Reserve Company also took over much of the processing of the ores into vanadium oxide (R. 161; Ex. U-B, R. 2358-2363, 367; Ex. U-D, 2369-2381, 373; Ex. U-I, R. 2381-2384, 393; Ex. U-4-T, R. 2457-2458, 968; Ex. U-R, R. 2410-2416, 436-437).

Then in 1943 the United States Army began to acquire uranium-bearing properties for the secret Manhattan Project, the ultimate purpose being the production of materials for nuclear fission, including the atomic bomb (Ex. U-Q, R. 2397-2409, 418). By the end of 1943, the United States controlled vast quantities of vanadium and uranium ores and oxides (Ex. U-5-T, R. 2485, 1985). By 1944 the shortage was over, as petitioners concede (Pet. Br., p. 56). Vast quantities of vanadium ores and oxides became available, from private producers as well as the Government stockpile, and could not be sold (R. 527).

3. *The Parties*

A. Petitioners

Petitioner Continental Ore Company is a partnership composed of petitioners Henry J. Leir, his wife Erna D. Leir, and his mother-in-law Lina Schloss. The partnership succeeded in 1942 to the assets of Continental Ore Corpora-

tion, also controlled by the same three individuals (R. 1033). Leir was the guiding spirit of the corporation and partnership and there is no evidence that Mrs. Leir or Mrs. Schloss participated in the business in any way.

Leir, a native German, arrived in this country in 1938, after a five-year period in Luxembourg (R. 1034, 1045-1047). Like Continental's vice-president Martin Wolf who emigrated in late 1941 and joined him in early 1942, Leir was primarily a merchant and broker in ores and minerals (R. 787, 790-791, 1035-1046).

Not surprisingly, therefore, Continental during the period involved in this action, engaged in trading in a number of ores and minerals (R. 1083-1086, 1103-1104). It had no interest in mining vanadium ore on the Plateau—although Leir agreed "definitely" that anyone with sufficient financial resources could have acquired sufficient ore-bearing bodies and constructed a plant to produce vanadium oxide (R. 1199)—and vanadium was but a small part of its activities (R. 1083-1086, 1103-1104).

Continental never owned any mines or bought any ore on the Plateau (R. 897). There is no proof that it ever milled vanadium oxide. It had no one with training or practical experience in metallurgy on its regular staff (R. 910-911). It only hired consultants from time to time for a particular problem (*Ibid.*). "That is the way we operate. We hire technicians, we hire attorneys, we hire any particular specialist we need" (*Ibid.*). As petitioners' brief states, they "were distributors and agents in [vanadium oxide and ferrovanadium] and, after a time, in other alloy metals" (Pet. Br., pp. 5-6). The investment made by Continental in this business was minimal (R. 932, 1211-1215).

Instead, as the uncontradicted evidence shows, petitioners sought during the war boom and shortage (1) to buy vana-

dium oxide and sell it for a profit, (2) to buy vanadium oxide, induce others to process it into ferrovanadium with their own capital and facilities, and then sell the product, and (3) to buy vanadium oxide, repackage it and sell it under the trade name "Van-Ex" at a price greater than that permitted by the Office of Price Administration. These were petitioners' activities until 1944.

Then, the war shortage over and the demand gone, petitioners lost interest in vanadium and thereafter traded in it only sporadically (Ex. 119, R. 2212, 1089).[8]

B. Respondent Vanadium Corporation of America

Vanadium Corporation of America—hereafter sometimes VCA—was organized in 1919 (R. 1965). As petitioners point out, it is a fully integrated miner, miller of vanadium oxide and manufacturer of ferrovanadium (Pet. Br., p. 13).

Since its organization, VCA has pioneered in the technical and commercial development of vanadium and has long been a recognized leader in vanadium, as well as a principal producer of many other ferro-alloys (R. 1689, 1824-1826).

---

[8] During or after the period involved in this action Leir evidently engaged in a number of other enterprises concerned with a variety of products, in addition to Continental Ore Company and Continental Ore Corporation.

The record contains references to (1) Austro-American Aluminum Corporation, which dealt in alumina and aluminum; (2) the Borites Corporation, which dealt in a mineral known as barytes; (3) the Coal Export Corporation, which exported "coal derivatives, coal tar products"; (4) another corporation which dealt in phosphates used for agricultural purposes; (5) the Magnolithe Corporation, which "was interested in the introduction of magnesia products—for sugar mills, for instance"; (6) the International Ore and Fertilizer Corporation; (7) the Continental Lead and Zinc Corporation, which dealt in lead and zinc; (8) the Continental Aluminum Corporation, which dealt in aluminum; and (9) the International Asphalt Corporation, which dealt in asphalt products (R. 1097-1102).

VCA sells vanadium mainly in its finished product form of ferrovanadium, and most of its vanadium oxide has been utilized in this way (R. 8, Comp. par. 15 not denied; R. 1827). Its customers include the leading steel manufacturers in this country (R. 7, Comp. par. 13 not denied; Ex. 17, R. Vol. VIII 73-132, R. 124)—a business achieved by technical leadership in adapting vanadium to the needs of customers, extensive research, the employment of skilled technicians who go out in the field and instruct steel makers in the proper uses of vanadium, and sales efforts devoted to persuading steel users to specify vanadium steels (R. 1824-1826). Because of the technical cooperation and supervision its customers have come to expect, VCA has never attempted to market vanadium through brokers (R. 1966).

VCA had owned a few vanadium-bearing ore bodies in the Colorado Plateau as early as 1919 and an idle vanadium mill at Naturita, Colorado, acquired by foreclosure in 1932 (R. 1827; Ex. 6, R. 2069-2070, 115). Its position as a producer, however, has historically been attributable to its ownership of what was formerly the richest vanadium mine in the world, located atop the Andes Mountains in Peru (R. 1828-1831). Vanadium ore could there be mined, and the ores milled into vanadium concentrate for refining, much less expensively than on the Plateau (R. 1829, 1923).

VCA did not commence raw material development in the United States until late in 1939, when imminent war in Europe threatened to isolate the Peruvian deposits and make its supply situation acute (R. 1826, 1956). VCA then undertook to rehabilitate the old plant it owned at Naturita and began operations there in 1940 (Ex. 6, R. 2069-2071, 115; R. 1918). In 1941 the Government urged VCA to increase its production from an annual rate of 2,700,000 to 4,000,000 pounds of vanadium by the end of 1942; by 1942 it had begun its operation of a Government-built plant in Monticello, Utah (Ex. V-2-O, R. 1837-1839).

Thus VCA, unlike petitioners, was in the vanadium business on a permanent basis and as a result of a large investment and sustained research and development (Ex. 6, R. 2069-2071, 115; R. 1689, 1824-1825). Indispatably it was a leading company. There is no question but that about 1938, when Leir arrived in this country, VCA and the Union Carbide group produced substantially all the ferrovanadium sold in the United States (Ex. V-2-M, R. 2556-2557, 1727). But insofar as supplies of ore and oxide were concerned there were forty or fifty other mining groups competing on the Plateau, and one of them had "far more ore than the Vanadium Corporation did" (R. 390, 509). And it is also undisputed—indeed it is conceded by petitioners' chief witness who recognized that VCA "had a strong, a long experience in marketing" (R. 505)—that VCA and the Union Carbide group had long been bitter competitors on the Plateau for such vanadium business as existed (R. 491, 504-505, 509, 1674-1675, 1680-1681).

C. The Union Carbide Respondents

Respondent Union Carbide Corporation (known as Union Carbide and Carbon Corporation when the action was commenced), during the period covered by the complaint, was the parent of a group of companies engaged in the mining, milling and sale of vanadium ores, vanadium oxide and ferrovanadium, as well as other ferro-alloys (R. 153, 164-166; Ex. 6, 2070-2071, 115).

Respondent United States Vanadium Corporation (USV), a wholly-owned subsidiary of Union Carbide, operated a mill for the processing of vanadium ores at Rifle, Colorado, from 1927 to 1932 (Ex. 6, R. 2070, 115). In 1932 the mill was shut down and sometime later dismantled (*Ibid.*). In 1936, USV erected another oxide mill at Uravan, Colorado, and, in 1942, another at Rifle, Colorado (*Ibid.*). It con-

tinued as a subsidiary until after the complaint was filed and was then merged into Union Carbide.

Three other Union Carbide subsidiaries were named in the complaint but were never served: Electro Metallurgical Company (Electromet or EM), which made ferrovanadium from vanadium oxide until its dissolution on January 5, 1949; Electro Metallurgical Sales Corporation (Electromet Sales or EMS), which sold vanadium products until its merger into the parent on March 14, 1949; and Electro Metallurgical Company of Canada (Electromet of Canada), a Canadian corporation, which sold ferrovanadium and vanadium oxide.

4. *The Core of Petitioners' Complaint*

The complaint charges violations of Sections 1 and 2 of the Sherman Act by reason of the same contracts, combination, conspiracy and monopoly alleged in the Government information, the trial of which resulted in respondents' acquittal (R. 13-16, 22; *supra*, p. 3 note). As already pointed out, the sufficiency of petitioners' evidence in support of these charges is not the question now before the Court (*supra*, p. 5).

More to the point here is petitioners' own claim of injury "by reason of" such assumed violations. They claim they were one of the "independent producers of ferrovanadium and vanadium oxide" who were "eliminated from the industry" as "one of the direct effects proximately caused by the monopolistic practices" alleged. Their complaint describes their four separate alleged ventures in the vanadium field (R. 16-21, pars. 30, 32-38; see also R. 23-24, par. 44-45). It was these ventures which petitioners had to prove at the trial were in fact frustrated by respondents' allegedly unlawful acts.

These ventures cover a period of about six years—from July 1, 1938, when Leir's Luxembourg corporation entered into a contract with Apex Smelting Company in this country, until sometime in 1944, when petitioners allege "Continental was forced to leave the vanadium industry altogether" (R. 17, par. 32; R. 21, par. 39). And through 1942, or during most of that six-year period, as they now point out in their brief, petitioners' vanadium sales grew (Pet. Br., p. 64). It was in 1943, the year of wartime scarcity and controls, that petitioners claim their business "suffered a severe decline" (*Ibid.*).

5. *Petitioners' Four Ventures in the Vanadium Business*

A. The Apex Contract Period

This period was the longest of petitioners' six-year connection with the vanadium business. According to the complaint, it ran from July 1938 to the spring of 1942 (R. 17-18, pars. 32-33). During this period petitioners' sales grew as vanadium enjoyed its early war boom (Pet. Br., p. 64).

En route to this country in 1938, Leir discussed with a shipboard acquaintance "the idea of going into the ferro-alloy business in general, including ferro-vanadium" (R. 1048-1049). He told him of a French process in which vanadium oxide was blended with other ingredients, mainly small pieces of aluminum, and then put in a crucible to be ignited with a small charge of magnesium (R. 792, 1049). The acquaintance thought Leir should see Apex Smelting Company in Chicago "because [they] were makers of aluminum, and aluminum was a part of our process" (R. 1049). That was the genesis of the Apex arrangement.

Leir conducted the negotiations which led to a contract dated July 1, 1938. The arrangement certainly was unusual. The parties were Apex and Societe D'Electro-Chimie de

Brignoud, a French corporation sometimes known as Frodet-Kuhlman (Ex. 117, R. 2190-2198, 1050; R. 1042). Contrary to the allegations of the complaint, neither Leir nor his Luxembourg corporation (Societe Anonyme Des Minerais) was a party to the contract (*Ibid.*; R. 17, par. 32). In brief, Brignoud was to sell its "secret process" to Apex in the United States and Canada, and Apex was to set up a separate department to make steel alloys. The profits were to be shared, but one-half of Brignoud's share was destined for the Leir's Luxembourg corporation; in December 1940 this interest was transferred to Continental (Ex. 117, R. 2198-2201, 1050; R. 1058). Six months later Continental reduced its share of the profits in exchange for appointment as Apex's exclusive sales agent at a 2½ per-cent commission (Ex. 117, R. 2187-2189, 1050; R. 1059, 1234).

There were obvious hazards in the arrangement. Apex had never made ferrovanadium; it was to be, as Leir said, "a new business for them" (R. 800-801, 1060-1061). Apex was to supply all the financing for the venture (R. 1115)—but nothing stipulated how much. Petitioners supplied no capital, but were to procure raw materials for Apex (R. 1115-1117).[7] And Apex, to produce a new product in its Chicago plant with its own employees, had to rely on Brignoud in France for the process and the necessary technical information (R. 910-911, 1293).

Over two years later—in August or September 1940—Apex finally produced its first ferrovanadium (R. 1062, 1124). In the interim, Continental, which was to supply the

---

[7] Under the Leir's Luxembourg corporation's "joint venture" with the French corporation, Leir had procured the raw materials—from South America, South Africa, Portugal and Burma—and had handled the sales, while the French company did the actual production (R. 789). But in that venture, unlike the Apex arrangement, the financing had been "fifty-fifty" (*Ibid.*).

raw materials for Apex's manufacturing operation, had a steady source of supply of vanadium oxide (R. 1124-1125). But the oxide was resold, mostly in foreign trade (R. 1125-1127, 1233-1234). These export resales stopped in July 1940, Leir admitted, because of the export ban (R. 1234). Continental nonetheless continued to sell large quantities of oxide to others than Apex through 1940 (Ex. U-5-N, R. Vol. IX 591-599, 1236-1237).

A little more than a year later Apex wanted to discontinue manufacturing operations in the face of continuing losses. Whatever promise the participants may have seen in the Apex arrangement in 1938, the record abounds with uncontradicted evidence of the true reasons for its frustration —reasons in no way connected with respondents. All of these reasons are specified in the contemporaneous correspondence between Apex and petitioners themselves.

In the first place, the venture was admittedly inadequately financed. Petitioners, who had no obligation to invest anything, wanted Apex to invest more. In February 1942, Leir wrote Apex a long letter, complaining bitterly that Apex had "treated the Ferro Department as a stepchild from the very beginning" and that the department "has never had the necessary equipment" (Ex. V-2-A, R. Vol. IX 603-608, 1176). He listed a series of conversations about a "new plant" which never materialized (*Ibid.*). At the trial, when asked if this fairly stated the situation, Leir replied he had written "an excellent letter" (R. 1185). Apex readily agreed that its investment had been "greatly inadequate for a sound and efficient business" (Ex. V-2-C, R. 2523, 1194).

There had also been persistent technical difficulties. Apex received little advice or assistance from the French company which owned the process, primarily because of the

outbreak of the war before Apex started production. Apex was forced to rely on its own experimentation and the results were faulty quality and considerable delay (Ex. V-2-B, R. 1188-1189, 1187; R. 1293-1294, 1349-1351). Not until late in 1941 had production difficulties been completely solved (R. 1351).

Moreover, Apex had difficulty finding in this country aluminum with a low copper content, essential to the operation (R. 873, 1217). It had anticipated using aluminum it produced from scrap aluminum, but it later found it necessary to go to a high purity primary aluminum which was difficult to get under wartime priorities and more expensive under price controls (R. 1280-1281; Ex. V-2-A, R. Vol. IX 603-608, R. 1176; Ex. V-2-B, R. 1189-1190, 1187).

Then in late October 1941—a few months after its first production of ferrovanadium—came a fire in the Apex ferro department which forced a shutdown of operations and prompted Apex to notify Continental of its wish to terminate ferro-alloy manufacture (R. 669, 1154, 1281; Ex. V-1-S, R. 1155-1157, 1154).

The fire was followed, even before production was resumed, by labor trouble related to the technical hazards of vanadium fumes and dust (R. 1283). On January 13, 1942 Apex wrote that it hoped "to get into production on Ferro Alloy this week, although we are having some difficulty with the labor, as most of them refuse to go to work in that Department. As you know, we have been trying to secure the proper respirators, but somehow or other, we have never been able to get any that keep the dust from getting into the men's throats and nostrils" (Ex. V-2-G, R. 2529, 1291). "It so happens," Apex reported a few days later, "that our men are now organizing, and the men that we have had in the Ferro Department refuse to go back into

it, as they claim that it is injurious to their health" (Ex. V-2-G, R. 2528, 1291).

Moreover, as an Apex officer testified, there had been "minor aggravations throughout the whole period of operation," as well as "lack of profit" (R. 1290). The ferro department "had been taking an awful lot of our time, too much a proportion of our time commensurate with the return to the company. In other words, accounting for a very small percentage of our sales in our operation, yet we were devoting an awful lot of executive time to it" (R. 1362).

Clearly Apex had been plagued in its attempt to finance a new department and make a product it had never made before. The basic contract gave it the right to terminate because of the losses it had sustained (R. 1191, 1295; Ex. 117, R. 2182-2201, 1050). Clearly too Apex had another, and even more compelling, reason to cancel the arrangement. Whatever attraction a new venture may have had in June 1938, the situation had changed by late 1941. Apex needed "space for production of aluminum, which was our principal business, and at that time was a very critical war material, the most critical" (R. 1291). The space "was much more valuable to us for aluminum operations than for ferro-alloy operations" (R. 1362).

After the October 1941 fire, Apex wrote Leir (Ex. V-1-S, R. 1155, 1154):

> "As our aluminum department is so vital a part of the defense program, and as new problems on which decisions must be made are coming up practically all of the time, we have decided that we must concentrate all of our efforts and available space in this department, and must discontinue anything that would interfere with its operation."

If Leir thought he "would be materially affected by our discontinuance of operations," Apex added, it "could possibly continue operations" until the end of the year to fill existing orders for which it had sufficient inventory on hand (*Id.* at 1156-1157). But it thought suppliers of vanadium oxide should be notified to discontinue shipments (*Id.* at 1157).[2]

Leir went to Chicago and persuaded Apex to continue (R. 1157-1158, 1171)—for how long does not appear. But in late January 1942, only a few months later, faced with increasing difficulty finding men to work in its ferro department because of its "hazardous nature" as well as continued losses, Apex wired Continental (R. 1283; Ex. V-1-Y, R. 2519, 1173):

> ". . . we are compelled to advise you that we are forced to discontinue this department. Will do our utmost to fill present orders subject to approval from Washington."

On February 13, 1942, Apex wired, "Cannot see our way to continue production ferro department beyond March 10th" (Ex. V-1-Z, R. Vol. IX, 602, 1174). The next day it notified suppliers to stop shipments of oxide (R. 1284).

On February 16, 1942, Leir protested Apex's decision at length (Ex. V-2-A, R. Vol. IX, 603-608, 1176). He pointed out that ferrovanadium was also an essential war item, listed Apex's alleged past shortcomings and offered to increase Apex's participation in profits; if Apex insisted on termination, however, Leir was ready to discuss it but de-

---

[2] Apex's letter reported it had received a notice of shipment from Nisley and Wilson (Ex. V-1-S, R. 1156, 1154).

Nisley, a witness for petitioners, testified he had been shipping to Apex and recalled that it was unable to take more because of the fire (R. 669).

manded a continuation for six months (*Ibid.*). Not hearing from Apex, Leir a week later threatened "steps to safeguard our interest" (Ex. V-1-W, R. 1168-1170).

To avoid further dispute with Leir, Apex agreed to a short extension of vanadium production (R. 1171, 1343). It operated its ferro department and produced ferrovanadium until April 1, 1942, and it produced Van-Ex—another vanadium product discussed below (pp. 20-23, 37-39)—at cost until July 1, 1942 (R. 1173). Apex's supplies of vanadium oxide and Van-Ex were shipped against orders it or Continental obtained (R. 1288). On final termination Apex offered its entire equipment to Continental, but Continental declined (R. 1360-1361; Ex. 122, R. 2215-2216, 2221, 1096; Ex. V-2-F, R. Vol. IX, 608-610, 1288). Apex then offered it to VCA (Ex. 130, R. 2225-2228, 1241; Ex. V-2-H, R. 2530-2532, 1359). Eventually VCA acquired Apex's supply of magnesite, a lining used for its crucibles, and nothing else (R. 1286-1287, 1361). Leir tried unsuccessfully to sell the remaining equipment for Apex, but Apex in 1943 finally abandoned the equipment (R. 1289, 1337-1338).

Thus ended petitioners' four years with Apex—the most extended and sustained of their four ventures in the vanadium business.

B. The Van-Ex Venture

Next in point of time, but overlapping somewhat the Apex period, came petitioners' efforts to promote a product called Van-Ex. It had started during the Apex period and continued at rented premises on Long Island, New York, according to the complaint, from August 1942 until sometime in 1944 (R. 18, par. 34).

Leir proposed Van-Ex to Apex on November 1, 1941 when, after the fire in its ferro department, he rushed to

Chicago to persuade Apex to continue ferrovanadium operations (R. 1158; *supra*, p. 19). Apex agreed to start experimentation with the new product (R. 1281-1282). Van-Ex, however, eventually turned out to be vanadium oxide, renamed and repackaged so that it could be sold at above-ceiling prices.

"The idea of making Van-Ex," Leir testified, "had been in our heads long before" the November 1 meeting (R. 1158). Within the month, however, he had been advised by a chemist, whom he accepted as an expert in the field, that "mixtures of vanadium with aluminum would lead necessarily to explosions" (Ex. V-1-T, par. 9, R. 2515-2516, 1163). He thought it likely that he would suggest reducing the amount of aluminum, but cautioned Apex, "until you have such new information from us, please do not prepare any mixtures for Van-Ex" (Ex. V-1-T, R. 2517, 1163). A week later, on December 3, 1941, he repeated that no Van-Ex should be prepared until receipt of further information about the aluminum content (Ex. V-1-U, R. 2518, 1164). Finally, it was decided not to use aluminum at all (R. 1166).

Continental also considered adding a little fluorspar to the vanadium oxide. Fluorspar did not provide heat but acted only as a flux (R. 844). But Leir thought it "would make the whole mixture a little more complicated for the one who analyzes it and who wants to imitate it" (Ex. V-1-B, R. 1161, 1005).

The first shipments of Van-Ex were evidently in March 1942 (Ex. 79, R. 2169-2173, 797). Later that month Apex reported that the first shipment had contained 2% fluorspar, "which could not be noticed," and thereafter it had been shipping "just the plain" oxide (Ex. V-1-X, R. 1171-1172).

Thus Van-Ex turned out to be vanadium oxide, without material additions. Apex regarded Van-Ex production as

a "straight packaging" of vanadium oxide (R. 1282).[2] Leir himself conceded, "At certain times straight vanadium oxide was shipped" as Van-Ex (R. 1172). Nothing in the record proves anything else.

It was offered to the steel trade as a substitute for ferrovanadium (R. 842). "Some of the companies," Continental's vice-president testified, "used plain vanadium oxide if they could get it to throw into their furnaces, not regarding or not caring too much in that war period whether they had a good recovery out of it, or whether it was economical or not" (R. 891).

Shortly after the first shipments of Van-Ex, the O.P.A. in May 1942 established the ceiling price for vanadium oxide at $1.10 a pound (R. 909; Ex. V-2-M, R. 2560, 1727). Continental, however, sold its Van-Ex at a price which brought it about $1.34 a pound of vanadium oxide—or 24 cents more than the ceiling price (R. 909-910). As Apex's officer testified, "We merely bought something and sold it at a higher price" (R. 1347-1348).

Apex continued to package Van-Ex for Continental at cost until July 1, 1942 (Ex. 122, R. 2215-2221, 1096; R. 871, 1071, 1173). After that the North Continent Mines (Shattuck) oxide shipments went direct to Continental, which had arranged to repack the material itself in "a little shop in Long Island" (Ex. U-3-Q, R. 2446-2448, 911; R. 843).

Petitioners made sales of Van-Ex through 1942 and early 1943, one of their customers being Atlas Steels Limited, a Canadian company (Ex. 79, R. 2169-2174, 797). Petitioners

---

[2] In February 1942 Apex cancelled an order for steel drums "when we found that Van-Ex was changed to a different business . . . as there is no use in having cans for anything we are not going to produce" (Ex. V-1-V, R. 1166-1167).

offered no proof as to how long the Van Ex venture actually continued. They were not even sure when the Long Island plant was closed (R. 989).[10] The record indicates that the Van-Ex venture was virtually over by May 1943 at the latest. For instance, petitioners now point out that they needed a small pebble mill to make Van Ex (Pet. Br., p. 49). But the record shows that the pebble mill had been sold in May 1943 (R. 1211-1212).

By that time, moreover, Continental had launched a new venture—an arrangement, similar to some extent to the Apex arrangement, for the manufacture of ferrovanadium by Climax Molybdenum Company (*infra*, pp. 24-27, 40). The record shows subsequent shipments of ferrovanadium (Ex. 79, R. 2169-2174, 797). It shows only two more shipments of Van-Ex, one to Atlas in May 1944 and another to a Swiss concern in May 1946 (*Ibid.*; Ex. U-5-E, R. 2467, 991). So far as Continental's vice-president knew, this last shipment could also have been just plain vanadium oxide (R. 991-992).

The vanadium oxide shortage had eased by the end of 1943 (R. 269; Ex. U-2-C, R. 471-473). Then certainly there was no longer any demand for the over-priced Van-Ex substitute. As Continental's vice-president later pointed out, when refusing an offer of oxide for resale, its customers were "not too keen on the change-over from Ferro-vanadium to fused Vanadium Oxide although they had used the oxide during the war" (Ex. U-3-J, R. Vol. IX 560-561, 889).

---

[10] Continental's vice-president testified (R. 989):

"Q. Well, when did you close the Long Island plant?
"A. I couldn't tell you any more than that.
"Q. Could you tell me the year?
"A. No, I don't know the year.
"Q. '44? '45?
"A. I believe it was '44."

C. The "Pending Negotiations" With Climax Molybdenum Corporation

In June 1943, according to the complaint, there were "pending negotiations for an arrangement with Climax Molybdenum Corporation to manufacture vanadium for Continental's account" (R. 21, par. 38).

We assume here *arguendo*, as the Court of Appeals assumed, that all the evidence offered by petitioners with respect to this venture was admissible. But the record is nonetheless barren of any evidence of the nature of the "pending negotiations" with Climax (see R. 817, 829).

The record does show that, in February 1943, Continental entered into a contract with Climax under which it agreed to ship to Climax 20,000 pounds of vanadium oxide, together with the necessary low copper aluminum for conversion, and Climax was to convert it into ferrovanadium for a fee (Ex. 111, R. Vol. VIII 182-183, 1014).[11]

The next month Continental requested the necessary oxide from Metals Reserve Company, which had to tell it that none was available (Ex. U-4-C, R. Vol. IX 567-568, R. 940-941). But in April 1943 Continental was able to get the 20,000 pounds of oxide called for by the Climax contract—half from Electromet and half from Metals Reserve Company—although for some time it continued to complain to Electromet about paying the regular $1.15 price for spot purchases of 500 pounds or more (Ex. U-4-D, R. Vol. IX 569, R. 942; Ex. U-4-E, R. Vol. IX 570, R. 943-944; Ex. U-4-F, R. Vol. IX 571-572, 945-946; Ex. U-4-G, R. Vol. IX 573-574, R. 946-947; Ex. U-4-H, R. 2451, R. 947-948; Ex. U-4-I, R. Vol. IX 575, R. 949-950; Ex. U-4-J, R. Vol. IX

[11] In January 1943, Leir had approached Apex with a new proposal for the manufacture of ferrovanadium (Ex. V-2-C, R. 2524-2526, R. 1194-1196). Apex was not interested (*Id.* at R. 2523-2524, R. 1196-1197).

576, R. 951; Ex. U-4-K, R. Vol. IX 577-578, R. 951-953; Ex. U-4-L, R. Vol. IX 579, R. 953-954; Ex. U-4-M, R. Vol. IX 580, R. 955; Ex. U-4-N, R. Vol. IX 581, R. 957; Ex. U-4-O, R. Vol. IX 582, R. 958). Electromet on June 1, 1943 accepted Continental's check for a lesser amount to terminate the price dispute (Ex. U-4-Q, R. Vol. IX 584, R. 960-961).

Continental, as its vice-president conceded, was able to comply with the terms of its Climax contract (R. 1027-1028). So far as the record shows, Climax also performed.

Petitioners recognize the absence of the proof the Court of Appeals could not find. They therefore now rely on two chance comments in the testimony to take the place of the evidence they should have produced to support the specific allegations of their complaint.

First, they emphasize testimony that petitioners "had likewise lost Climax Corporation, who had done the same thing for us [as Apex], and did not continue because of interference by the defendants with Climax" (R. 978). But this was a patently argumentative conclusion of Continental's vice-president and cannot substitute for evidence of the existence and nature of the negotiations. If such negotiations did occur, they were peculiarly within petitioners' knowledge and should have been properly proved.

Second, they rely on testimony given by the same witness in connection with a letter to Electromet in May 1943—in the course of the price dispute over the April 1943 shipment—expressing a willingness to sign a contract for requirements for the rest of the year (Ex. U-4-M, R. Vol. IX 580, R. 955).

Significantly, there was no claim of any similar offer to VCA. What does not appear in petitioners' summary of the testimony (Br., pp. 106-107), is that Continental had

insisted the price should be $1.10 a pound rather than $1.15, and that Electromet had explained that $1.15 was the regular price on spot, as distinguished from contract, purchases (Ex. U-4-J, R. Vol. IX 576, R. 951; Ex. U-4-L, R. Vol. IX 579, R. 953-954). Continental's answer was an ingenious bargain proposal (Ex. U-4-M, R. Vol. IX 580, R. 955-956):

> ". . . we believe that we can overcome this difficulty in price resulting from the difference between spot and contract sales. We are perfectly willing to sign a contract with you for our requirements until the end of the year . . .
>
> "This contract, at the usual price of $1.10 . . . could then be considered as applying to the lot shipped in April."

Continental did not wait for a reply. Leir had his bank forward a check against the invoice, computed at the $1.10 rate (Ex. U-4-O, R. Vol. IX 582, R. 958). Significantly, too, Continental did not repeat its offer of a requirements contract when Electromet accepted the check, at the $1.10 rate, as payment in full to end the dispute (Ex. U-4-Q, R. Vol. IX 584, R. 960-961).[12] But nothing in the correspondence suggests any negotiations with Climax or the anticipated use of the additional oxide—requested only while bargaining to beat down the price of the prior shipment—for any continued relations with Climax.

---

[12] The offer to enter into the requirements contract with Electromet was never rejected, despite petitioners' claim (Pet. Br., p. 59). Exhibit U-4-N (R. Vol. IX 581, R. 957)—which petitioners cite (*Ibid.*)—was admittedly an answer to an earlier letter (R. 957-958).

Indeed, before any reply was received, Continental proposed to Electromet that it would put at its disposal a like amount of oxide out of the production of Nisley & Wilson—"for which we hold a contract with Metals Reserve at $1.10 and which has been allocated to us"—"so that the entire transaction can be written off" (Ex. U-4-P, R. Vol. IX 583, R. 959-960).

Much later petitioners' counsel asked the witness whether he recalled "for which of these contracts"—the Climax contract (for which petitioners had previously obtained their oxide) or the Imperial contract (which was not to be entered into until seven months later)—"you made that demand for the requirement contract" (R. 1018). The witness, erroneously placing the demand in June 1943, could only guess, "June of '43? That would have been probably for Climax, I would say" (R. 1018).

But petitioners never offered evidence of any subsequent "pending negotiations" with Climax, in June 1943 or any other time. Nothing in the record even suggests that Continental ever approached Climax again, much less any details of any negotiations. In short, nothing supports any inference that there were ever any negotiations with Climax that were not fully consummated.

D. The Imperial Paper and Color Arrangement

Finally, petitioners' complaint alleged that in "the spring of 1944, Continental entered into a contract with Imperial Paper and Color Corporation . . . whereby Imperial agreed to process ferro-vanadium and vanadium oxide and Continental agreed to act as sales agent for its entire output, in addition to undertaking to secure the necessary raw materials" (R. 19, par. 35).

The contract was dated January 4, 1944 (Ex. 110, R. 2175-2178, 1014). As in the Apex arrangement, Imperial was to install the equipment necessary to manufacture vanadium products, "including but not limited to vanadium oxide and ferro vanadium" (Ex. 110, R. 2175-2177, pars. 1, 4, 1015). But it was agreed that the contract was "contingent upon the decision of Imperial to manufacture vanadium from other raw materials than chromite and/or to make ferrovanadium" (R. 2178, par. 8). If Imperial decided

"not to enter this new field of production," the agreement was to be "null and void" (*Ibid.*). Continental agreed to act as Imperial's exclusive sales agent on a commission basis and "to cooperate" with Imperial in the potential manufacture of its products (R. 2175). The only additional engagement petitioners undertook was (R. 2175-2176):

> "... to consult with Imperial with reference to the availability of raw material, the metallurgical or chemical processes to be employed, and * * * report to Imperial all changes in market conditions and the development of new sources of supply for raw material etc. both in the domestic and foreign markets."

Thus the Imperial arrangement was not one for the procurement of vanadium oxide as such but of "raw materials," e.g., ores, etc., from which Imperial could manufacture vanadium oxide to be sold or converted by it into ferrovanadium. Imperial, however, never installed the necessary equipment, never produced any ferrovanadium (or any vanadium oxide other than its chromite by-product), and the record permits no dispute about the reasons for its decision. A war-produced labor shortage made operations impossible until at least May 1945 (Ex. U-3-K, R. Vol. IX 561-562, R. 892; Ex. U-3-N, R. Vol. IX 564, R. 899-900; Ex. 114, R. Vol. VIII 185-186, R. 1022-1023). By then the demand for ferrovanadium and vanadium oxide had declined sharply (R. 1530-1531, 1680-1682; Ex. 76, R. Vol. VIII 174-175, R. 762-763; Ex. U-P, R. 407-414; Ex. U-2-B, R. 471-473; Ex. U-2-C, R. 473-476; Ex. U-2-Z, R. 738; Ex. U-3-A, R. 739; Ex. U-3-B, R. 740-741). Imperial had not perfected its process (U-3-N, R. Vol. IX 564, R. 899-900; Ex. 115, R. 2179-2182, 1024).

In December 1944, almost a year after the contract had been executed, Continental asked Imperial for a letter which it could show to Metals Reserve (Ex. U-3-N, R. Vol.

IX 564, R. 899-900). Imperial was to explain that "things have been held up because of the present manpower shortage," but that it intended, as soon as the labor situation changed, "to proceed with the vanadium production on a substantial scale" (Ex. U-3-X, R. 899-900). Imperial declined as it was still unwilling to make any commitment; it feared the letter "might be construed as a representation that would involve an obligation that we do not care to assume" (Ex. 114, R. Vol. VIII 185-186, R. 1022-1023).

As far as the record shows, Imperial never assumed any obligation under the contract with Continental. Petitioners' assertion that as late as 1946 they were still attempting "to manufacture ferrovanadium on a permanent basis with Imperial" (Pet. Br., p. 65) finds no support in the record. There is no evidence at all about 1946 and the brief interchange of 1947 correspondence put in evidence by respondent Union Carbide (Ex. U-3-J, R. Vol. IX 558-561, R. 889) shows Imperial pursuing a reluctant Continental to help find a customer for some vanadium oxide Imperial wished to dispose of.

On this record only one thing is clear: as the Court said below, "The arrangement never got started" (R. 2582).

6. *Petitioners' Claimed Elimination From the Vanadium Industry*

Petitioners' burden was to prove that their four ventures in the vanadium business terminated or failed as a result of acts forbidden by the antitrust laws. In an attempt to sustain that burden, petitioners rely primarily on thirteen "requests for vanadium oxide from respondents" between July 1939 and November 1943 (Pet. Br., p. 59, also pp. 40-43, 51-52, 56-58). They also complain that respondents interfered with their relations with Apex in 1942 and with

Climax and a Canadian customer in 1943 (Pet. Br., pp. 47-48, 52-56). Each of these so-called requests for customers and interferences is discussed in this section, in connection with the period or venture to which petitioners claim it relates.

Petitioners also claim that respondents "interfered with independent oxide suppliers" (Pet. Br., pp. 44-46, 60-63). We submit these claims are immaterial as well as unfounded since the uncontradicted record shows no inadequacy of supplies or any effect on any of petitioners' ventures. But since VCA is charged with the alleged interference with Blanding Mines, and perhaps with some participation in the claimed thwarting of petitioners' plan to erect a ferro-vanadium plant on the Colorado Plateau—a subject raised here for the first time in this litigation—these too are discussed so that there may be no doubt with respect to them (*infra*, pp. 35-37, 43).

A. Apex

Petitioners' complaint alleged that "Apex was unable to operate profitably for the specific reason that it was unable to obtain vanadic acid, and was thus compelled to cease manufacture of ferro-vanadium" (R. 18, par. 33).[13] Their brief suggests "various actions," some "frantically" made and another "desperate," to obtain the oxide to allow Apex to remain in business. But the indisputable evidence—from Apex and Leir himself, as well as the contemporaneous documents—is that Apex throughout its operations had all the oxide it needed and a plentiful additional supply was available to it.

From July 1938 to August or September 1940, before Apex started manufacture, Apex had no immediate need for

[13] Vanadic acid and vanadium oxide are used interchangeably (R. 1063-1064).

oxide. Stockpiling then for future operations struck Leir as "irrational," although "we could have done it" (R. 1233). Supplies were available, but the export demand perhaps too attractive. Until July 1940, when the embargo ban became effective, Leir simply exported the bulk of the substantial quantities of vanadium he purchased (R. 1233-1234). Four of the thirteen "requests for vanadium oxide from respondents," on which petitioners rely, predated the export embargo and Apex's first production and fell in the period in which Leir was reselling oxide to others. Manifestly they could not have affected Apex or denied it supplies for its operations.

When Apex started manufacture in August or September 1940, it was being supplied by two different sources (R. 1124-1125). Even then there was no decision to stockpile. As Leir put it, they could keep the raw material for Apex's use or "ship it in other directions" (R. 1125). In August 1940 Apex expected 20,000 pounds from one of these suppliers during the next two months (Ex. V-1-J, R. 2498-2500, 1127). Leir recommended the 20,000 pounds be resold "because there is a production of about 10,000 lbs. every month from Rifle and two new productions which will open very shortly in Arizona and Los Angeles" (*Id.* at 2499). Perhaps he was affected by the three per cent commission which he thought he "definitely had a right to," although he later agreed to return it to Apex (R. 1129, 1131-1132). At the trial Leir conceded the resale was "an error in judgment" (R. 1130-1131).

At that time, Leir said at the trial, he "was not concerned" about getting regular supplies of vanadium oxide (R. 1237). Perhaps too he had to accommodate himself to Apex's policy against stockpiling and long term contracts —to limit its purchases "approximately to what we had

definitely sold for the future" (R. 1275, 1353). With Leir's confidence and Apex's policy, Continental continued to resell oxide to other customers—over 28,000 pounds between September and December 1940 and another 1,800 pounds in early 1941 (Ex. U-5-N, R. Vol. IX 591-601, R. 1236-1237). Again Electromet's so-called refusal of oxide in October 1940—apparently a broad interpretation of an Electromet representative's statement when he was in Apex's office (Pet. Br., p. 59; Ex. 128, R. Vol. VIII 189-190, R. 1240)—could not have affected Apex's manufacturing operations.

Moreover, in the year that followed Apex's first production, it refused four separate opportunities to make commitments which would have provided it much greater supplies of oxide on a sustained basis—(1) from Blanding Mines, which was then supplying it with a lesser amount monthly, in the Fall of 1940 (Ex. V-2-I, R. 1698-1700; R. 1153, 1700); (2) from the Morrison mill in December 1940 (Ex. V-1-K, R. 2501, 1133; Ex. V-1-O, R. 1140-1142); (3) from the new operator of the Morrison mill in the Spring of 1941 (Ex. V-1-P, R. 1142-1145); and (4) from the National Vanadium Company in September 1941 (Ex. V-1-Q, R. 2507-2513, 1145; Ex. V-1-R, R. 2514-2515, 1150-1153).

Even these decisions—for which respondents are in no way responsible—are difficult to question. Throughout the period Apex had a regular supplier in Shattuck (North Continent Mines) which had "far more ore than the Vanadium Corporation did" (R. 509)—from which it received very substantial shipments (Ex. 118, R. 2210, 1066; Ex. V-1-S, R. 1154-1157; R. 1066-1068). It had other suppliers as well (*Ibid.*). And during the remainder of the Apex operation—including the January 1941-January 1942 period which petitioners now call the "critical period" (Pet. Br., p. 102)—only once did petitioners make a direct request for oxide of any respondent and then never followed up

when they received no answer.[14] The other so-called requests, all in June or July 1941, were either not for oxide or not to any of the respondents.[15]

"From October to December, 1941," according to their brief, "petitioners frantically attempted to obtain oxide" (Pet. Br., p. 102). But they did not request any from any respondent. Moreover, the record clearly shows, Apex had enough oxide to fill all outstanding orders in October 1941, when the fire in its ferro department brought about its notice to Leir that it wished to discontinue operations (Ex.

---

[14] Petitioners produced a short letter to Electromet dated June 14, 1941, which was merely a request for an "offer" of an unspecified quantity of vanadic acid (Ex. 77, R. Vol. VIII 176, R. 776). Electromet evidently could not find it in its files (R. 776), and no answer was produced. Nor do petitioners—although now said to have been desperate (Pet. Br., p. 103)—appear to have done anything to follow up when no response was received.

[15] The two other requests in June 1941 were that petitioners be allowed to convert VCA and Electromet oxide for their account—not that they be sold oxide (Ex. 77, R. Vol. VIII 176, R. 776; Ex. 132, R. 2261-2263, 1245). VCA, of course, had ample facilities for converting its own oxide and replied that it was not interested (Ex. 132, R. 2261-2263, 1245; R. 1971). Electromet replied that it was "at the moment able to smelt all the vanadic acid which we have available" (Ex. 77, R. Vol. VIII 176, R. 776). Certainly these requests do not suggest that Apex did not have sufficient oxide for its own manufacturing needs.

On July 16, 1941, petitioners claim, they asked for oxide from VCA and Electromet through the Vanadium Section of OPM (Pet. Br., p. 59). Their request was not offered in evidence and nothing in the record suggests any reason for it. For all that appears, the request was not even for Apex. OPM's reply stated simply that it had been informed by VCA and USV "that they have no vanadic acid for disposal since they are themselves using all of the acid they produce either in their production of ferro-vanadium or to supply their own customers using vanadium for defense and essential purposes" (Ex. 132, R. 2265, 1245).

Nothing in the record suggests that the facts were not in all respects as stated to OPM. Indeed, Continental conceded that respondents did use their oxide in the manufacture of ferro-vanadium for steel and that it was "not necessarily" good business for some one to sell oxide he produced if he needed it in his own manufacture of ferrovanadium (R. 869-870).

V-1-S, R. 1155-1157, 1154). Apex then pointed out that Shattuck had been shipping 12,000 to 18,000 pounds of oxide "to us every couple of weeks" (*Id.* at 1157). It even suggested that all suppliers, including Shattuck, be notified immediately to discontinue shipments until further notice (*Id.* at 1157). By the end of 1941 Apex had 45,827 pounds of oxide on hand; in the first half of 1942, when it resumed operations, it purchased another 82,892 pounds (Ex. 143, R. 1306-1307; Ex. 118, R. 2210, 1066).

In February 1942, having repeated its decision to discontinue ferrovanadium operations, Apex notified Shattuck (North Continent Mines) to discontinue shipments until further notice (Ex. V-2-E, R. 1284). It then had about 50,000 pounds of oxide on hand (R. 1331, 1342). This was enough to fill all existing orders (R. 1361). And Leir conceded that Apex at that time was able to get additional supplies (R. 1175).[16]

---

[16] Leir had persuaded Apex to sign a letter he had written, dated December 13, 1941, to the Defense Plant Corporation for oxide from the Monticello plant to be erected (Pet. Br., pp. 102-103).

The letter claimed Apex's plant for the production of ferro-alloys had been built in 1930 and could not make use of all its production facilities "due to the lack of raw material" (Ex. 144, R. 2266, 1313). Of course, Apex had started ferro alloy production in 1940—not 1930—and had only recently solved its production difficulties (R. 1351). Moreover, Apex then had almost 50,000 pounds of oxide on hand and was not even in production because it was rebuilding the plant which had been destroyed in the fire (Ex. 143, R. 1306-1307; R. 1358). Clearly Apex then had no shortage of raw materials and, as its officer testified, the correspondence referred to some "future operations" and "distant date" (R. 1358).

By February 16, 1942, there may have been "assurances," as Leir argued to Apex, which would "facilitate our obtaining part of the new output" of the new Government Monticello plant (Ex. V-2-A, R. Vol. IX, 603, R. 1176; Pet. Br., 104-105). But Apex had already decided to discontinue operations. Raw materials never having been its problem, there was no reason to change its mind.

By mid-1942 all its obligations to Continental had been fulfilled and Apex was finished with the ferrovanadium business (*supra*, pp. 19-20). Continental arranged with North Continent Mines to take over the purchase of its production which had formerly gone to Apex (Ex. U-3 Q, R. 2446-2447; R. 911-915).

Perhaps Leir, sensing the results of Pearl Harbor, wanted Apex to accumulate oxide. But Apex itself—whose business is alleged to have terminated because of an inability to obtain oxide—clearly could get all it wanted.[17] There is not a shred of evidence that Apex or Continental lost a single sale because it could not get oxide. And at the trial, an Apex officer three times confirmed what was indisputable from the record—very simply, an inability to secure oxide "wasn't the reason for closing" the ferrovanadium business (R. 1287; see also R. 1290, 1361-1362).

Sensing the weakness of their claim of shortage of oxide, petitioners attempted to pat the blame on VCA for Apex's decision to go out of the vanadium business (Pet. Br., pp. 47-48). This charge is as unfounded as the alleged oxide shortage. There is no question that an Apex vice-president in charge of sales first approached VCA and not vice versa. It was "the normal thing" for him "to contact somebody in reference to disposing of the equipment after we made a decision to go out of business" (R. 1286). He advised VCA of Apex's decision and that Apex had some equipment and a small stock of oxide on hand it would like to dispose of,

---

[17] If there were "some short periods" when Apex did not have a sufficient supply of oxide coming in, it was concededly the result of its own policies (R. 1274-1277).

It would not stockpile—not even one month's supply (R. 1274-1275, 1277). It would not finance or help finance oxide mills and turned down several requests for such assistance from suppliers (R. 1275-1276). Its policy was not to enter into contracts to take a fixed quantity of oxide over an extended period, and it refused several requests for such contracts (R. 1276).

if VCA was interested (Ex. 62, R. Vol. VIII 163, R. 671). Apex was to supply further details and VCA a few weeks later, not having heard from Apex, followed up with a telephone call (Ex. 62, R. Vol. VIII 167, R. 671, 673). Apex then reported legal difficulties with Leir and its counsel's advice to make the most satisfactory arrangements it could with him (Ex. 62, R. Vol. VIII 167, R. 671, 673; Ex. V-1-W, R. 1167-1170; 1343).

Apex agreed to a short extension of operations (*supra*, p. 20). Then it offered Continental the opportunity to acquire its equipment (R. 1337). Continental did not buy it and could not even sell it for Apex, so that it had to be abandoned except for a supply of magnesite eventually sold to VCA (R. 1337). Clearly, neither these facts nor VCA's purchase of "very small quantities" of dioxidizing ingots sold by Apex (R. 1336-1337) afford any basis for an inference that Apex's decision to go out of the vanadium business was the result of "an agreement" with VCA, as petitioners assert (Pet. Br., p. 47).

No more support can be found for petitioners' claim that VCA "usurped" the Blanding Mine oxide production from Apex in early 1942 or for their insinuation that this was also in some way responsible for Apex's decision to discontinue operations (Pet. Br., pp. 34, 45-46).

In the first place, shipments from Blanding had stopped, as petitioners concede, in January 1941 (Pet. Br., p. 44)—or about a year before the Apex termination. Blanding had shut down its plant for certain improvements (R. 1703; Ex. 131, R. 2234-2235, 1242). But Blanding did not renew dealings with Apex when it resumed production in October 1941; Apex's price offer was "below other offers which we [Blanding] have received" (Ex. 131, R. 2235-2236, 1242).

Nor is there any basis for the inference that Blanding's inability to deal with Apex on January 9, 1942—even without regard to the fact that on January 14, 1942 it opened the door to future dealings with petitioners (Ex. 131, R. 2240-2241)—contributed to Apex's renewal on January 27, 1942 of its earlier decision to discontinue vanadium operations. Apex had made its reasons for discontinuing perfectly clear and they did not include the lack of Blanding or any other oxide suppliers (Ex. V-1-Y, R. 2519, 1173-1174). Indisputably Apex then had adequate supplies from Shattuck (North Continent Mines) and other suppliers with whom it had continuing current dealings—and even Leir admitted it could obtain additional supplies (*supra*, pp. 32-34).

B. Van-Ex

Here the complaint alleged that (1) Continental's business in Canada was effectively eliminated by respondents, and (2) "in 1944, Continental discontinued shipping from its Long Island location because the difficulty of securing raw materials rendered it commercially impossible to operate profitably" (R. 18, par. 34).

The Canadian issue is essentially a legal question and is discussed under Question 3. Worth noting here, however, is the basic inconsistency of petitioners' position. As the Court of Appeals pointed out (R. 2577):

> "It seems obvious that, if lack of supplies was really the cause of Continental's undoing with regard to Van-Ex, the loss of Atlas [a Canadian concern] as a customer would become irrelevant, for the absence of customers cannot hurt a seller who has nothing to sell. On the other hand, if the defection of Atlas was the cause of Van-Ex's demise, the alleged lack of supplies could have had no relevance, for an abundance of goods is of no use to a seller who lacks customers."

The entire record on Van-Ex is singularly sparse. But it is clear that petitioners' further claim that Van-Ex, like Apex, suffered from difficulty in securing raw materials, has nothing to support it.

The record does show that Apex, when it discontinued its Van-Ex packaging on July 1, 1942, transferred its oxide stocks and the North Continent Mines source to Continental (*supra*, p. 35). Shipments to Continental continued in 1942 and through April 1943 (Ex. 118, R. 2203, 1066). It also received 4,000 pounds from the Nisley & Wilson mill in late 1942 (Ex. U-3-W, R. 923-924). There is no suggestion that these supplies were inadequate.

In January 1943, Leir proposed a new ferrovanadium venture to Apex and the discontinuance of the Van-Ex business (*supra*, p. 24 note; Ex. V-2-C, R. 2524, 1194-1196). There was no question of any shortage of raw materials (R. 1196):

> "Q. Well, now, Mr. Leir, then in January of '43 you had assurance of ample supplies of vanadic acid, is that correct? A. Yes."

In April 1943 Continental obtained 20,000 pounds of oxide which it used for its February 1943 contract with Climax for the manufacture of ferrovanadium (*supra*, p. 24). In May 1943 it had a contract with Metals Reserve for at least 20,000 pounds of oxide out of Nisley & Wilson production (Ex. U-4-P, R. Vol. IX, 583, R. 959-960).

Petitioners never offered evidence which would clearly define the Van-Ex period, and the only inference is that they had lost interest by April or May 1943. The oxide Continental received in April 1943 went to Climax, not Van-Ex (*supra*, p. 24). If Continental "needed only a small pebble mill to make Van-Ex"—as petitioners now state (Pet. Br., p. 49)—the pebble mill was sold in May 1943 (*supra*, p. 23).

Its May 21, 1943 request for oxide from Electromet—its first request of any respondent in almost two years (Pet. Br., p. 39)—was evidently not for Van-Ex, if in fact it had any purpose other than as a palpable ploy in a price dispute (*supra*, pp. 25-26). In any event, petitioners' counsel at the trial suggested only that the requested oxide was for either Climax or Imperial—not Van-Ex—and Continental's vice-president guessed it would have been for Climax (*supra*, p. 27).

It is therefore unnecessary to answer in detail petitioners' varied disagreements with the Court of Appeals' disposition of the claim of oxide shortage during the Van-Ex period (Pet. Br., pp. 109-110). Whether or not the Nisley & Wilson mill was shut down from October 1942 to April 1943, as petitioners assert, is immaterial if there is no proof in the record that petitioners' inventory and its supplies from other sources were insufficient. For the same reason, it is immaterial that Metals Reserve Company in March 1943 "turned down petitioners' request for oxide" (Pet. Br., p. 109)—although petitioners in fairness might have added that the request was filled the very next month, half of the material coming from Electromet, and that the request was for Climax ferrovanadium and not Van-Ex (*supra*, p. 24).

In short, whatever Van-Ex was, however long it lasted and whatever the reasons for its disappearance—and petitioners' proof is obscure on all these points—there is nothing in the record to support petitioners' claim that Van-Ex was discontinued because of difficulty in securing raw materials (R. 18, par. 34).

C. Climax

The complaint alleged that "M. D. Arrouet, an official of one of the defendants"—subsequently identified as Elec-

tromet (R. 814)—in June 1943 "informed Continental that it should desist from attempting to conclude pending negotiations for an arrangement with Climax Molybdenum Corporation to manufacture vanadium for Continental's account" and "threatened that if Climax undertook the manufacture of ferro-vanadium for Continental, the defendants would enter the molybdenum industry as a reprisal against Climax" (R. 21, par. 38).

The simple answer is that the record contains nothing about these alleged pending negotiations (*supra*, pp. 24-27). Not one witness or a single piece of paper even suggests that the threats were ever carried out or that the reprisals were ever taken. Nor is there any evidence to support an inference that either Continental or Climax terminated the alleged pending negotiations—whatever they might have been—because of anything said or done by the Union Carbide employee.

As the Court of Appeals necessarily concluded, respondents "have thus failed to show any injury resulting from the alleged threats." Plainly, no jury could conclude that petitioners were injured in their business by the disruption of negotiations when it is never told what the negotiations were or anything about what is supposed to have happened to them.[18]

---

[18] We leave to Union Carbide's brief the question whether Arrouet was authorized to act for it.

We submit, however, that he could not bind VCA. Moreover, petitioners' offer of proof nowhere suggests that VCA knew anything of any negotiations with Climax, cared anything about them, or had authorized any reprisals against Climax. Nor did the offer of proof represent that anything Union Carbide or any affiliate had threatened it might do or had done was in furtherance of any conspiracy with VCA (Pet. Br., pp. 52-54).

D. Imperial

Finally, petitioners' complaint alleged, with respect to the Imperial contract—"At the end of the year 1944, Imperial was compelled to abandon the contract . . . because of the inability of Imperial or Continental to secure vanadium oxide or vanadium-bearing ores" (R. 19, par. 35).

Petitioners then referred to vanadium-bearing ores as well as vanadium oxide. But Imperial patently had not been willing to make the necessary investment for an assured supply of ore (Ex. 114, R. Vol. VIII 185-186, R. 1022-1023). Nor is there any evidence that Continental had developed any taste for mining or milling on the Plateau. Indeed, all the assets of North Continent Mines were available until August 1944; Leir investigated the possibility but never made an offer (Ex. U-5-1, R. Vol. IX, 586-588; R. 1205, 1207-1208).

Petitioners now refer to vanadium oxide rather than vanadium-bearing ores (Pet. Br., 56-58, 108-109). They argue that petitioners' November 1943 "requests for supplies"—actually a request for an offer of 10,000 to 15,000 pounds a month "for a fixed length of time" (Ex. 42, R. Vol. VIII, 156, R. 271)—"were for the specific purpose of supplying Imperial" (Pet. Br., p. 108). But, despite the alleged refusals, Continental in January 1944 nonetheless proceeded to enter into its contract with Imperial (*supra*, pp. 27-29). Nor did petitioners ever make any subsequent request of VCA, despite its reply to the "request for supplies" on November 19, 1943—in which VCA had explained that, because of its present commitments, it was "not in the position to take on this additional tonnage at the present time" (Ex. 41, R. Vol. VIII, 154, R. 269). It then added (*Id.* at 272):

> "Perhaps if you are still interested at a later date and our situation changes, we will be glad to look into the matter further at that time." [19]

In January 1944 Continental could enter into a contract with Imperial, and thereafter through the life of the contract make no request of respondents, only because it knew that oxide was plentiful (*supra*, pp. 8, 23). Petitioners themselves have emphasized that vanadium oxide then "was in over supply" (Pet. Br., p. 56). Many opportunities to obtain a regular supply were spread on the record. Illustrative perhaps are the 50,000 pounds of oxide available to Continental in January 1944 (Ex. U-4-B, R. 936-937). Then in March 1944 Blanding, which had supplied oxide to Continental in a prior period, reported it had an output of 15,000 pounds a month which it would expand to 50,000 pounds per month if Continental would provide financial assistance, but Continental declined; it then offered to sell its entire output up to 20,000 pounds per month for a period of nine months, which was also declined; and finally offered to sell an existing stock of 12,000 pounds of oxide, which was similarly declined (Ex. V-2-K, R. 2533-2553, 1715-1719; Ex. V-2-L, R. 2554, 1715-1726).

There may be many explanations of the termination of the Imperial contract (*supra*, pp. 27-29). But the explanation cannot be found in either a non-existent inability to obtain oxide or any act of any respondent.

---

[19] Petitioners argue that their requests to VCA and Electromet in November 1943 "were jointly refused" (Pet. Br., p. 57). Actually, there were separate and different replies on different dates (Ex. 41, Vol. VIII, 154, R. 270; Ex. 42, R. Vol. VIII, 156, R. 271).

Petitioners similarly argue that "Burwell testified that Electromet did not sell oxide to Mr. Leir at this very time because respondents wanted 'to keep him out of the vanadium business'" (Pet. Br., p. 58). Burwell had been asked only about the request to his company and at most was testifying about the reasons he thought his company had; nothing suggests that he knew anything of the request of VCA or anything of the reasons for its reply (R. 546-547).

It is evidently at one point in this same Imperial perio that respondents are supposed to have "thwarted pet tioners' plan" to erect a ferrovanadium plant on the Col rado Plateau (Pet. Br., p. 61). The only record mention such a "plan"—and the only reference cited by petitione —is in part of a VCA exhibit introduced to show the avai ability of Blanding oxide and petitioners' refusal to take (Ex. V-2-K, R. 2533-2544, 1715).

The exhibit petitioners cite itself shows the nature of th "plan". What petitioners now rely on as an undertakin by Continental "to construct a plant" (Pet. Br., p. 61) ap pears in a sentence in a draft agreement Leir sent Blandin in March 1944 (Ex. V-2-K, R. 2537-2543, 1715). The so called undertaking was expressly conditioned on Blanding production of 50,000 pounds of oxide a month and it was als to "be apparent that such production can be maintaine over a reasonable period thereafter" (*Id.* at 2541-2542)— production Blanding itself said it could not attain witho further financial assistance (*Id.* at 2545). Moreover, Leir draft agreement contained merely an undertaking by Con tinental "to receive delivery" of Blanding's entire outpu "as the same shall or may be specified for delivery fro time to time by Continental" (*Id.* at 2538). Blanding note that throughout Leir's draft "Continental 'undertakes,' an in most instances, Blanding 'agrees' "; it insisted that Con tinental agree to take the entire output, subject to thre or six months notice (*Id.* at 2544-2545). Continenta promptly refused (*Id.* at 2550-2551).

In short, Continental was unwilling either to suppl financial assistance or commit itself to take deliveries, an Blanding was unwilling to obtain financing elsewhere with out a commitment from petitioners (*Id.* at 2544-2551). Th reason for the end of the "plan" to construct a plant—whic petitioners assert here for the first time in this litigation— is clear and uncontradicted.

Summary of Argument

Set forth above are the material details of the proof relating to petitioners' ventures in the vanadium business and to the reasons they assign for the termination of these ventures.

In both courts below respondents contended the record could not sustain a finding for petitioners. The question became moot in the trial court when the jury returned a general verdict for respondents. It became determinative in the Court of Appeals which concerned itself only with the question whether there was sufficient proof of "a causal connection" between the respondents' alleged wrongdoing and petitioners' alleged loss, without consideration of the unrelated errors petitioners had specified (R. 2572). And the Court of Appeals, finding the proof of this causal connection insufficient, affirmed the judgment entered for respondents on the jury verdict (R. 2572-2573, 2583).

The limited questions presented here, simply stated, are (1) whether proof of such causal connection, or fact of damage to petitioners' business, is necessary, (2) whether petitioners' proof was sufficient, and (3) whether petitioners' alleged loss of sales by the concededly valid acts of the Canadian Government were admissible for the purpose of proving such fact of damage.

When these questions are viewed against the record, without the distortions and insinuations petitioners have included in the questions presented for certiorari, it becomes abundantly clear that the Court of Appeals applied only well-settled rules, that its decision in no way conflicts with applicable decisions of this Court or of any Court of Appeals and involves no question of law which has not long been settled by this Court, and that what petitioners

propose here are new principles without support in precedent, reason or policy.

1. The requirement that a plaintiff in a treble damage action prove that he was in fact injured by the alleged violation of the antitrust laws—whether expressed as causal connection or relation, fact of damage or proximate result—has long been settled. It is a requirement which distinguishes the private action from the Government action. It is dictated by the statute which gave petitioners their right of action. It was early established in this Court and most recently reaffirmed in *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1946). It has been uniformly imposed by the lower courts.

Without such proof, principle clearly requires and the courts have uniformly held, dismissal of petitioners' complaint was mandatory.

The case was brought and tried with full recognition of this additional burden on the private suitor. Now, however, because of their failure of proof and on the basis of a distortion of *Bigelow*, petitioners propose an abandonment of the requirement of the statute and the creation of an inference of causal connection merely from the assumed fact of antitrust violation. A treble damage plaintiff, on petitioners' theory, recovers whenever he can show an antitrust violation and that his business failed, whatever the reasons for his failure.

2. Petitioners were not "deprived of a trial by jury," as petitioners suggest in Question 3 (Pet. Br., p. 5). Nor is there any conflict, direct or otherwise, with *Beacon Theatres, Inc.* v. *Westover*, 359 U. S. 550 (1959), as petitioners there also represented to the Court (*Ibid.*). Significantly, petitioners cite but never discuss *Beacon Theatres* (Pet. Br., pp. 71, 92, 93). There the courts below had denied

petitioners' request for a jury trial of the factual issues in the case (359 U. S. at 501, 503-504). Here petitioners had a jury trial.

No one disputes the constitutional right to a jury trial. Similarly, no one can now dispute, under the settled rules of this Court, the right and duty of a court to review the record to determine whether the evidence is sufficient to sustain a verdict for plaintiff and to direct a verdict for defendant when the evidence is insufficient. However the quantum and quality of the necessary proof be expressed, manifestly the judgment for respondents here must be affirmed in the absence of evidence to sustain a rational, honest and reasonable finding in petitioners' favor with respect to an essential element of their cause of action.

3. The final question relates to the exclusion of evidence relating to petitioners' alleged loss of a Canadian customer as a result of acts in Canada by a Canadian subsidiary of Union Carbide, concededly acting as the agent of the Canadian Government for the wartime purchase and allocation of vanadium for Canadian steel firms.

Basic and settled questions of policy are involved. The issue here is not whether the Union Carbide Canadian subsidiary was directed or instigated by corporate affiliates in this country or whether they in fact had anything to do with petitioners' loss of the Canadian customer; we necessarily assume *arguendo* everything petitioners asserted in their offer of proof. Nor is the issue now whether such activities in this country could be evidence to support a charge of conspiracy or intent to monopolize or would be admissible in a Government action; we necessarily assume too, because of the questions on which certiorari was granted, that the other evidence in the record was sufficient to sustain a finding of violation of the statute.

The sole issue now is whether petitioners can establish the fact of damage or injury to them by proof of the act of the Canadian Government, and recover damages for the loss allegedly suffered as a result of such act—an issue which inevitably brings into dispute the reasons why that Government acted as it did and whether it was in fact in any way affected by the claimed persuasion or instigation of the alleged conspirators. Both courts below recognized that that issue necessarily involved a determination with respect to the acts of a sovereign power and was not within the purview of the Sherman Act.

We submit the result below was clearly dictated by established principles of comity, sovereign immunity and the extraterritorial limitations of the antitrust laws settled by this Court in *American Banana Co.* v. *United Fruit Company*, 213 U. S. 347 (1919), reaffirmed with respect to foreign sovereigns as recently as *Steele* v. *Bulova Watch Co., Inc.*, 344 U. S. 280, 288 (1952), and for similar considerations recently applied to valid governmental action in this country in *Eastern Railroad Presidents Conference* v. *Noerr Motor Freight, Inc.*, 365 U. S. 127 (1961).

ARGUMENT

QUESTION 1

Proof of a causal connection between respondents' alleged antitrust violations and the alleged failure of petitioners' vanadium business ventures was an essential element of petitioners' cause of action. Without such proof there was no issue for the jury.

Section 4 of the Clayton Act grants a right of action to anyone "injured in his business or property by reason of anything forbidden in the antitrust laws." 15 U. S. C. §15. "As the statutory language suggests, recovery under section 4 of the Clayton Act, as under its predecessor, §7 of the Sherman Act, . . . 'cannot be had unless it is shown, that, as a result of defendants' acts, damages in some amount susceptible of expression in figures resulted,' Keogh v. Chicago & N. W. Ry. Co., 260 U. S. 156, 165 (1922)." *Herman Schwabe, Inc.* v. *United Shoe Machinery Corp.*, 297 F. 2d 906, 909 (2 Cir. 1962).

Petitioners' complaint therefore alleged that their elimination from the vanadium industry had been "proximately caused" by respondents' alleged violations of the Sherman Act (R. 16, par. 30; R. 23, par. 45). Consistently, their proposed instructions to the jury recognized that a plaintiff, to recover in a private action, must establish not only acts in violation of the statute but also "that these acts had a proximate impact on his business or trade which caused injury to it" (R. 57, No. 14). Consistently, too, the trial court charged the jury, without objection, that petitioners had to prove that the allegedly unlawful acts "injured them and were the direct, immediate and proximate cause of such injury" (R. 2026).

Thus there was agreement below that petitioners' burden included proof of causal connection between respondents' alleged violation of law and their injury. And the Court of Appeals included such causal connection as one of the three essential elements of a private action (R. 2572):

> "(1) That the defendant has violated the antitrust laws; (2) that plaintiff has suffered an injury to his business or property susceptible of being described with some degree of certainty in terms of money damages; and (3) that a causal connection exists between the defendant's wrongdoing and the plaintiff's loss."

The Court of Appeals then concluded, assuming *arguendo* the sufficiency of the evidence to support the first two elements of their cause of action, that petitioners' evidence was nonetheless "insufficient to justify a jury verdict that this necessary causal relation existed" (R. 2572-2573).

Question 1, as framed by petitioners in their petition for certiorari, proposed an unsupported and extreme proposition of law (Pet. Br., p. 4). Simply stated, petitioners' position is that causal relation may be inferred by the jury, without further proof, where the "question of violation is confessed," "measurement of damages is more than sufficiently supported by relevant economic data," and "the destruction of the plaintiff" can be found to have been "an important goal" of the respondents. In short, petitioners seem to contend in their first legal argument (Pet. Br., pp. 74-90), a jury may find for a plaintiff without proof that the alleged purpose and intention to eliminate him was actually effected by the defendant and whether or not his elimination or withdrawal resulted from circumstances completely unrelated to anything done by the defendant. That is the contention answered in this section of this brief.

Petitioners' argument, however, sometimes obscures the nature of the extreme proposition they are urging in Question 1. For instance, they state in the course of their argument that "causation is proved upon the showing of impact or contact" (Pet. Br., pp. 74-75). There are still other references to alleged "contact" or "impact" on petitioners (*e.g.*, Pet. Br., pp. 70, 76, 78). Later petitioners find it "undeniable" that respondents' conduct "had a direct, immediate and injurious impact on petitioners, who were, as a result of these activities, unable to remain in the vanadium industry" (*Id.* at 79-80). If petitioners thereby intend to concede the necessity of proof of causal connection, there is no dispute except with respect to the sufficiency of their proof to support a jury verdict. That is a separate issue, presented by Question 2 and discussed below (pp. 61-70).

A. It Has Been Consistently Held That a Plaintiff in a Private Action Must Prove a Causal Connection Between His Losses and Defendant's Antitrust Violations.

Petitioners' allegations of proximate cause were dictated by well-settled rules. "In a private antitrust suit, the plaintiff must not only allege a violation of the antitrust laws, but damage to the plaintiff proximately resulting from the acts and conduct which constitute the violation." *Karseal Corporation* v. *Richfield Oil Corporation*, 221 F. 2d 358, 362 (9 Cir. 1955). In accord, *e.g.*, *Association of Western Railways* v. *Riss & Company, Inc.*, —— F. 2d ——, CCH 1962 Trade Cases ¶70,204, p. 75,751 (D. C. Cir. January 25, 1962).

Such allegations, of course, must be proved. It is not enough that a plaintiff prove that "a defendant has injured its competitors generally . . . in the absence of evi-

dence that would justify a finding of injury to the particular plaintiff." *Herman Schwabe, Inc.* v. *United Shoe Machinery Corp.*, 297 F. 2d 906, 909-910 (2 Cir. 1962). "The courts have held uniformly that it is a prerequisite to the maintenance of an action under the antitrust laws by a private suitor that the plaintiff prove that he was damaged as a direct result of defendant's violation of the Sherman Act." *Sperry Products Inc.* v. *Aluminum Company of America*, 171 F. Supp. 901, 938 (N. D. Ohio 1959), affd. on this issue 285 F. 2d 911, 927 (6 Cir. 1960), cert. denied 368 U. S. 890 (1961). And proof of loss of profits does not itself "establish that such loss was a proximate result" of the allegedly unlawful acts. *Talon, Inc.* v. *Union Slide Fastener, Inc.*, 266 F. 2d 731, 737-738 (9 Cir. 1959).

However the essential elements of the private action be expressed, one is proof of the "causal connection" or "causative relation" between defendant's wrongful act and plaintiff's loss, referred to by the court below and in a myriad of other cases. *E.g., Momand* v. *Universal Film Exchanges, Inc.*, 172 F. 2d 37, 43 (1 Cir. 1948), cert. denied 336 U. S. 967 (1949), reh. denied 337 U. S. 934, 961 (1949); *Royster Drive-In Theatres, Inc.* v. *American Broadcasting-Paramount Theatres, Inc.*, 268 F. 2d 246, 250 (2 Cir. 1959), cert denied 361 U. S. 885 (1959); *Monticello Tobacco Co.* v. *The American Tobacco Co.*, 197 F. 2d 629, 633 (2 Cir. 1952), cert. denied 344 U. S. 875 (1952); *E. V. Prentice Machinery Co.* v. *Associated Plywood Mills, Inc.*, 252 F. 2d 473, 477 (9 Cir. 1958), cert. denied 356 U. S. 951 (1958); *The Flintkote Company* v. *Lastfogel*, 246 F. 2d 368, 392 (9 Cir. 1957), cert. denied 355 U. S. 835 (1957); *Atlas Building Products Co.* v. *Diamond Block & Gravel Co.*, 269 F. 2d 950, 958 (10 Cir. 1959), cert. denied 363 U. S. 843 (1960).

This insistence on proof of causal connection, of course, necessarily follows from the basic difference between a pri-

vate and public action under the antitrust laws. The Government action protects the public generally. The private action was intended to give additional protection to "the victims of the forbidden practices." *Radovich* v. *National Football League*, 352 U. S. 445, 454 (1957). Thus a "private person has no right to complain of a violation of §1 or §2, as such, nor does such a violation per se give rise to a private cause of action. . . . It is only when a violation of §1 or §2 causes *damage* that a cause of action inures to private benefit and then only to the extent of the trebled amount of such damage. Consequently, forbidden acts cannot be relevant unless they *cause* private damage." *Wolfe* v. *National Lead Co.*, 15 F. R. D. 61, 63 (N. D. Cal. 1953), affd. 225 F. 2d 427 (9 Cir. 1955), cert. denied 350 U. S. 915 (1955); *Hunter Douglas Corporation* v. *Lando Products*, 235 F. 2d 631, 638 (9 Cir. 1956).

Causal connection here is the *fact* of damage. Indisputably, under the general rule, "[c]ertainty in the fact of damage is essential." *Palmer* v. *Connecticut Railway & Lighting Company*, 311 U. S. 544, 561 (1941). To be sure, there need not be absolute certainty. But there must be proof that comes to more than speculation, surmise or conjecture (*infra*, pp. 64-65)—whether it be expressed as proof to a "reasonable certainty," as in *Atlas Building Products Co.* v. *Diamond Block & Gravel Co.*, 269 F. 2d 950, 958 (10 Cir. 1959), cert. denied 363 U. S. 843 (1960); or to a "reasonable probability," as in *E. V. Prentice Machinery Co.* v. *Associated Plywood Mills, Inc.*, 252 F. 2d 473, 477 (9 Cir. 1958), cert. denied 356 U. S. 951 (1958); or to a "fair degree of certainty," as in *Momand* v. *Universal Film Exchanges, Inc.*, 172 F. 2d 37, 43 (1 Cir. 1948), cert. denied 336 U. S. 967 (1949), reh. denied 337 U. S. 934, 961 (1949).

Nor is petitioners' burden met by the testimony which, they repeatedly claim, shows that it was the "specific inten-

tion" of respondents "to eliminate these petitioners from the vanadium industry" (Pet. Br., p. 68; see also pp. 69, 70, 78, 79).[20] Inherent in every conspiracy to monopolize is a purpose or intent to exclude or eliminate competition. The competitor claiming treble damages must nonetheless prove that he was excluded or eliminated as a result of the conspiracy. A "finding that the conspiracy [has] not damaged the plaintiff [is] therefore a finding that the plaintiff [has] not proved its claim." *Association of Western Railways* v. *Riss & Co., Inc.*, —— F. 2d ——, CCH 1962 Trade Cases ¶75,204, p. 75,751 (D. C. Cir. Jan. 25, 1962). The rule for which petitioners contend would simply abolish the need for proof of causal connection wherever an intent to monopolize has been alleged.[21]

---

[20] In their legal argument, as in their statement of the case, petitioners persist in their use of the collective "respondents." Thus they state, without record citation—"Respondents' officers testified they intended to harm petitioners" (Pet. Br., p. 90).

Petitioners can mean only the testimony of Blair Burwell, a former vice-president of one of the Union Carbide subsidiaries, who testified about his company's refusal to sell petitioners in November 1943 and in no way attempted to implicate VCA in this alleged refusal to sell (*supra*, p. 42 note). Certainly no other officer of any respondent testified to any such intent.

[21] Petitioners attempt to buttress their contention with a "legal presumption" that "a conspiracy to eliminate competition continues until it succeeds" (Pet. Br., p. 85). It may be presumed on a special plea of the statute of limitations, as in *United States* v. *Kissel*, 218 U. S. 601 (1910), that conspiracies are continuing offenses.

But nothing in that opinion stands for the proposition that all conspiracies necessarily continue or are necessarily successful, or excludes the possibility that the competitor might eliminate himself or be eliminated by other causes. As this Court indicated in the sentence following the one quoted by petitioners (Pet. Br., p. 85)—"*If* [the conspirators] do continue such efforts in pursuance of the plan the conspiracy continues up to the time of *abandonment* or success" (218 U. S. at 608). And in a treble damage action plaintiff has "the burden of proving that the conspiracy in fact did continue." *Royster Drive-In Theatres, Inc.* v. *American Broadcasting-Paramount Theatres, Inc.*, 268 F. 2d 246, 249 (2 Cir. 1959), cert. denied 361 U. S. 885 (1959).

And wherever there is a failure of proof of causal connection, there is no issue for a jury. "Absent a showing of causal connection between the collusion and jobbers' refusals to handle plaintiff's product, dismissal was mandatory." *Monticello Tobacco Company, Inc.* v. *The American Tobacco Co.*, 197 F. 2d 629, 633 (2 Cir. 1952), cert. denied 344 U. S. 875 (1952). In accord, *e.g.*, *Momand* v. *Universal Film Exchanges, Inc.*, 172 F. 2d 37, 43 (1 Cir. 1948), cert. denied 336 U. S. 967 (1949), reh. denied 337 U. S. 934, 961 (1949) (directed verdict for defendant); *Wolfe* v. *National Lead Co.*, 15 F. R. D. 61, 63 (N. D. Cal. 1953), affd. 225 F. 2d 427 (9 Cir. 1955), cert. denied 350 U. S. 915 (1955) (complaint dismissed); and *Sperry Products, Inc.* v. *Aluminum Company of America*, 171 F. Supp. 901, 939 (N. D. Ohio 1959), affd. on this issue 285 F. 2d 911, 927 (6 Cir. 1960), cert. denied 368 U. S. 890 (1961) (counterclaim dismissed).

B. Nothing in *Eastman Kodak*, *Story Parchment* or *Bigelow* Dispenses With Proof of Causal Connection or Bars a Directed Verdict in the Absence of Proof of Such Connection.

Petitioners argue the decision below "is in direct conflict" with "three landmark decisions of this court": *Eastman Kodak Co.* v. *Southern Photo Materials Co.*, 273 U. S. 359 (1927); *Story Parchment Co.* v. *Paterson Parchment Paper Co.*, 282 U. S. 555 (1931); and *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1946) (Pet. Br., p. 81). *Eastman Kodak*—although cited in a point heading in petitioners' brief (p. 81)—is nowhere further referred to. *Story Parchment* and *Bigelow* are discussed at length (Pet. Br., pp. 81-90).

Apparent throughout petitioners' argument is a fundamental confusion of the proof required to establish (1) the *fact of damage* or the causal connection between the

alleged violation and their injury, and (2) the dollar *amount of damage* which a plaintiff may recover when he has proved both violation and causal connection. Concededly, damages may be recovered even where they cannot be calculated with exactness and a defendant may not complain when his wrongful conduct has rendered difficult the precise ascertainment of damages. But a plaintiff must nonetheless offer sufficient competent proof that he was in fact injured by a defendant's conduct.

The three decisions of this Court on which petitioners rely made this distinction clear. In all three cases, it was later pointed out, "the illegal practices of defendants constituted the only active cause of plaintiff's injury." *Momand* v. *Universal Film Exchanges*, 172 F. 2d 37, 42 (1 Cir. 1948), cert. denied 336 U. S. 967 (1949), reh. denied 337 U. S. 934, 961 (1949); see too *Herman Schwabe, Inc.* v. *United Shoe Machinery Corp.*, 297 F. 2d 906, 913 (2 Cir. 1962). None permitted recovery without proof of causal connection in addition to the amount of damages.[22]

In *Eastman Kodak* plaintiff had indisputably been injured by defendant's act.[23] The only question was whether

---

[22] The distinction, of course, is not limited to private actions under the antitrust laws. Thus this Court cited *Story Parchment* in a case involving the rejection of a lease in a proceeding under the Bankruptcy Act. *Palmer* v. *Connecticut Railway & Lighting Company*, 311 U. S. 544, 561 (1941):

> "Certainty in the fact of damage is essential. Certainty as to the amount goes no further than to require a basis for a reasoned conclusion."

[23] Plaintiff, a stock house dealing in photographic supplies, had purchased its goods from defendant on the same terms as other dealers with whom it was thereby able to compete (273 U. S. at 368). Thereafter defendant, having acquired control of other stock houses in plaintiff's city in competition with plaintiff and having unsuccessfully attempted to purchase plaintiff's business, refused to sell plaintiff its goods at the prices at which they were sold to the dealers and agencies defendant controlled and with whom plaintiff

the injury had been inflicted "in furtherance of a purpose to monopolize." Defendant contended that its refusal to continue to sell plaintiff at discounts which would have enabled it to compete "was justified by the fact that the plaintiff had previously undertaken to handle the goods of another manufacturer under a preferential contract" (*Id.* at 375). But plaintiff's handling of such other goods, as this Court held, could not in itself justify defendant's refusal, if only because "it was not shown that the defendant knew of this contract when it refused to sell its goods to the plaintiff" (*Ibid.*). And this Court found that "the circumstances disclosed in the evidence sufficiently tended to indicate such purpose [to monopolize], as a matter of just and reasonable inference, to warrant the submission of this question to the jury" (*Ibid.*). In a separate section of the opinion this Court thereafter discussed the evidence relating to "the amount of damages" (*Id.* at 376-379).

Again in *Story Parchment*, where this Court reinstated a judgment on a jury verdict for plaintiff, this Court found "sufficient support in the evidence" for the findings that respondents had combined to monopolize interstate trade and that "petitioner was injured in its business and property as a result of this unlawful combination" (282 U. S. at 560). Nowhere did it hold, as petitioners here argue, that proof of conspiracy to eliminate a competitor by the three respondents holding monopoly power and the demise of the competitor "presented sufficient evidence of causation to sustain a verdict" (Pet. Br., p. 81). There was abundant

---

therefore could no longer compete (*Id.* at 368-369).

Petitioners here, unlike plaintiff in *Eastman Kodak*, have failed to show injury resulting from respondents' alleged refusals to deal with them or that respondent's prevented them from obtaining supplies elsewhere on terms which would have enabled them to compete, or even that their business was injured because of lack of supplies (*supra*, pp. 29-43).

evidence of causal connection."[24] And this Court again separately considered the question of the amount of damages and emphasized the distinction which petitioners here disregard (*Id.* at 562):

> "It is true that there was uncertainty as to the extent of the damage, but there was none as to the fact of damage; and there is a clear distinction between the measure of proof necessary to establish the fact that petitioner had sustained some damage, and the measure of proof necessary to enable the jury to fix the amount. The rule which precludes the recovery of uncertain damages applies to such as are not the certain result of the wrong, not to those damages which are definitely attributable to the wrong and only uncertain in respect of their amount."

---

[24] Petitioner in *Story Parchment* claimed it had been injured because it was compelled to sell its products at reduced prices to meet respondents' reduced prices.

This Court's opinion noted that there was "evidence, sufficient to justify the action of the district court in submitting the issue to the jury, that after petitioner began business the three companies combined and conspired to continue" their prior substantial monopoly (282 U. S. at 560). Moreover, "there was evidence from which the jury reasonably could have found that in pursuance of the conspiracy respondents sold their goods below the point of fair profit, and finally below the cost of production; that petitioner had an efficient plant and sales organization, and was producing a quality of paper superior to that produced by either of the three companies; and that current prices, shown in detail, were higher during a period antedating the unlawful combination and price cutting in pursuance of it than afterward" (*Id.* at 561). There was also evidence showing the higher prices received by petitioner before, and the lower prices after, respondents' cut prices were put in operation (*Id.* at 561). Finally, there was evidence tending to show that petitioner's losses did not result from any inefficiency in the production or marketing of its product (37 F. 2d at 542).

The injury to petitioner's business was manifestly the proximate result of respondents' price cutting. Certainly "it is fair to say that the natural and probable effect of the combination and price cutting would be to destroy normal prices" (282 U. S. at 561).

Bigelow v. *RKO Radio Pictures, Inc.*, 327 U. S. 251 (1946), reaffirmed the distinctions made clear in *Eastman Kodak* and *Story Parchment*. There was a conceded unlawful conspiracy to maintain a discriminatory system of distribution (327 U. S. at 254). Petitioners, theatre owners in Chicago, were denied the early releases of motion pictures which were enjoyed by theatres owned or controlled by certain of the respondents and were unable to obtain them until after most of the theatres owned by respondents, several of which competed with petitioners' theatre, had finished their showing (*Id.* at 255-256).

Despite the disagreement in the Court as to whether or not petitioners there had shown the fact of damage, neither opinion suggested that such proof was no longer necessary. "The earlier a playing position," the majority found, "the more desirable it is, since it is preferable to exhibit pictures before they have been shown to the public in other theatres in the competitive area" (327 U. S. at 256). This would seem confirmed by evidence of the reduction of petitioners' receipts during the period of the conspiracy and of the substantially higher receipts of a comparable competing theatre which enjoyed a prior run (*Id.* at 257-258). "Upon the record in this case it is indisputable that the jury could have found that during the period in question a first or prior run theatre possessed competitive advantages over later-run theatres, . . . and that, other things being equal, the establishment of the discriminatory release system was damaging to the petitioners, who were relegated by it to a playing position inferior to that of their competitors" (*Id.* at 260). "The evidence here was ample to support a just and reasonable inference that petitioners were damaged by respondents' action, whose unlawfulness the jury has found, and respondents do not challenge" (*Id.* at 266). And on the amount of damages, assuming sufficient proof of the fact

of damage, this Court then followed *Eastman Kodak* and *Story Parchment* to permit "a just and reasonable estimate of the damage based on relevant data" (*Id.* at 264).

Thus in *Bigelow* petitioners had clearly shown they were unable to obtain releases of motion pictures, unlike petitioners here who never established they did not have sufficient supplies of oxide or that they could not obtain them. In *Anderson* v. *Mt. Clemens Pottery Co.*, 328 U. S. 680 (1946), this Court later made it clear that the requirement of certainty in the fact of damage had not been abandoned. It cited *Bigelow* as well as *Eastman Kodak* and *Story Parchment*. "[T]he rule that precludes the recovery of uncertain and speculative damages," it then said, "applies only to situations where the *fact of damage* is itself uncertain" (328 U. S. at 688). Only where the fact of damage is certain, and the "uncertainty lies only in the amount of damages," do *Bigelow*, *Story Parchment* and *Eastman Kodak* permit "a reasonable inference as to the extent of the damages" (*Ibid.*).

The lower courts have similarly construed the three decisions on which petitioners rely. "These cases," the Court of Appeals for the Third Circuit recently said in affirming a judgment for defendants in a refusal to deal case because there was "no damage or legal injury," "merely stand for the proposition that having established the fact of damage or legal injury, the difficulty of determining the amount of damage will not preclude a recovery." *Lawlor* v. *National Screen Service Corporation*, 270 F. 2d 146, 153 (3 Cir. 1959), cert. denied 362 U. S. 922 (1960). They "have drawn a distinction between the quantum of proof necessary to show the *fact* as distinguished from the *amount* of damage; the burden as to the former is the more stringent one." *The Flintkote Company* v. *Lysfjord*, 246 F. 2d 368,

392 (9 Cir. 1957), cert. denied 355 U. S. 835 (1957) (emphasis in original).[25]

"In other words," the Court of Appeals continued in *Flintkote*, "the *fact* of injury must first be shown before the jury is allowed to estimate the *amount* of damage" (246 F. 2d at 392; emphasis in original). And that fact must still be shown with "a fair degree of certainty." As the Court of Appeals said in *Momand* v. *Universal Film Exchanges, Inc.*, 172 F. 2d 37 (1 Cir. 1948), cert. denied 336 U. S. 967 (1949), reh. denied 337 U. S. 934, 961 (1949) —on which the court below relied (R. 2573)—after discussing *Bigelow, Story Parchment* and *Eastman Kodak* (172 F. 2d at 43):

> "The law has gone far to ease that burden [of strict requirements of proof as to exact quantity of damage] by permitting proof of losses which border on the speculative, in order to implement the policy of the anti-trust laws. *But a fair degree of certainty is still essential to show the causative relation of defendants' misconduct and plaintiff's injury.*"

---

[25] The two cases in the Ninth Circuit which petitioners cite (Pet. Br., p. 85)—*Richfield Oil Corporation* v. *Karseal Corporation*, 271 F. 2d 709 (1959), and *Fox West Coast Theatres Corporation* v. *Paradise Theatre Building Corporation*, 264 F. 2d 602 (1958)—stand for no different construction of *Bigelow* or any other decisions of this Court. *Richfield* cited the statement from *Flintkote* quoted above and then held plaintiff had proved the causal connection (271 F. 2d at 711-713). *Fox*, which discussed no cases, involved a conspiracy to maintain a discriminatory motion picture distribution system like that in *Bigelow*.

QUESTION 2[26]

The evidence of causal connection was insufficient to support a verdict for petitioners. The Court of Appeals therefore properly affirmed the judgment entered on the jury's verdict for respondents.

The question presented here is whether petitioners "were deprived of a trial by jury" by the judgment of the Court of Appeals (Pet. Br., p. 5).

The essence of petitioners' argument is that "there was a conflict in the evidence on the issue of causation" which they were entitled to have "determined by the jury" (Pet. Br., p. 91), that the trial court was of the opinion that "sufficient evidence was present to submit the case to the jury" and submitted it to the jury (*Id.* at 91-92), that the Court of Appeals erred in reviewing the record to determine whether the evidence was sufficient to support a verdict for petitioners (*Id.* at 92-99), and that the Court of Appeals somehow directed a verdict for respondents (Pet. Br., pp. 91, 92).

Certain aspects of this argument should be clarified at the outset.

First, respondents of course do not question that "it is the jury, not the Court, which is the fact-finding body," as petitioners point out in their quotation from *Tennant* v. *Peoria & Pekin Union Railway Co.*, 321 U. S. 29, 35 (1944) (Pet. Br., pp. 93-94). This means, as *Tennant* added, that

---

[26] The question here discussed is actually the third question on which this Court granted certiorari and appears as Question 3 under "Questions Presented" in petitioners' brief (p. 5).

This question, however, is discussed here as "Question 2," following its designation and the sequence of argument in petitioners' brief (pp. 91-111).

"Courts are not free to reweigh the evidence and set aside the jury verdict merely because the jury could have drawn different inferences or conclusions or because judges feel that other results are more reasonable" (321 U. S. at 35).

But not all cases are therefore to be determined by juries. Nor do all jury determinations stand. "The rule is settled for the federal courts and for many of the state courts, that whenever in the trial of a civil case the evidence is clearly such that if a verdict were rendered for one of the parties the other would be entitled to a new trial, it is the duty of the judge to direct the jury to find according to the views of the court." *Pennsylvania Railroad Company* v. *Chamberlain*, 288 U. S. 333, 343 (1933). See also *Slocum* v. *New York Life Insurance Co.*, 228 U. S. 364, 369 (1913); *Lauria* v. *E. I. du Pont de Nemours & Co.*, 250 Fed. 353, 357 (2 Cir. 1918).

Second, the trial judge reserved decision on respondents' motions for a directed verdict, the jury verdict was for respondents, and the trial court expressly concurred in it (R. 2052). The pending motions for a directed verdict thereby became moot but nothing supports petitioners' inference that the trial judge thought petitioners had presented a jury question on the causation issue (*supra*, p. 4). Had the jury found for petitioners, the trial judge might well have set aside the verdict and directed judgment for respondents.[27]

---

[27] The case having been fully tried, the trial judge followed long established practice in submitting it to the jury, even though he might have felt petitioners had not sustained their burden on the causation issue or any other issue. *Baltimore & Carolina Line, Inc.* v. *Redman*, 295 U. S. 654, 659-661 (1935). Otherwise, if he had simply granted respondents' motion for a directed verdict, there would be no jury verdict to reinstate and an entire new trial would be necessary if it were later determined that the case should have gone to the jury.

Third, the Court of Appeals did not direct a verdict for respondents as in the case where it reverses a judgment for petitioners entered on a jury verdict in their favor. Nor is this a case in which disputed factual issues have been disposed of before trial, as in *Poller* v. *Columbia Broadcasting System, Inc.*, —— U. S. —— (February 19, 1962).

The Court of Appeals here merely affirmed "the judgment as rendered" for respondents, on the jury verdict, in the court below (R. 2571). In so doing, it applied the well-settled rule that a "successful party in the District Court may sustain its judgment on any ground that finds support in the record." *Jaffke* v. *Dunham*, 352 U. S. 280, 281 (1957); see also *Helvering* v. *Gowran*, 302 U. S. 238, 245 (1937); *Story Parchment Company* v. *Paterson Parchment Paper Co.*, 282 U. S. 555, 560 (1931); *Lagnes* v. *Green*, 282 U. S. 531, 538-539 (1931); *United States* v. *American Railway Express Co.*, 265 U. S. 425, 435 (1924). Thus where the evidence is insufficient to support a verdict for a plaintiff—so that a directed verdict could have been granted the defendant in the trial court—the Court of Appeals should affirm the judgment for defendant, without discussion of or regard to the errors claimed by plaintiff. *E.g.*, *Syres* v. *Oil Workers International Union*, 257 F. 2d 479, 484 (5 Cir. 1958), cert. denied 358 U. S. 929 (1959); *United States* v. *J. E. Bohannon Company, Inc.*, 232 F. 2d 756, 757-758 (6 Cir. 1958); *Wonnacott* v. *Denver and Rio Grande W. R. Co.*, 187 F. 2d 607, 608 (10 Cir. 1951); *Monolith Portland Midwest Co.* v. *Western Public Service Co.*, 142 F. 2d 857, 859-860 (10 Cir. 1944); *Nalbantian* v. *United States*, 54 F. 2d 63, 64 (7 Cir. 1932), cert. denied 285 U. S. 536 (1932); *Weidenfeld* v. *Pacific Imp. Co.*, 43 F. 2d 817, 820 (2 Cir. 1930), cert. denied 282 U. S. 890 (1930).

Here affirmance was on the ground that the evidence of the necessary causal relation was insufficient and that the

trial judge, if the verdict had been for petitioners, would have been obliged to direct a verdict for respondents (R. 2572-2573). Patently it was proper for the Court of Appeals to review the record, and we submit its conclusion was in all respects correct.

A. The Sufficiency of the Evidence Is Always a Question of Law

"Whether the evidence was sufficient or otherwise," when respondents moved for a directed verdict, "was a question of law to be resolved by the court." *Baltimore & Carolina Line, Inc.* v. *Redman*, 295 U. S. 654, 659 (1935). And in determining the sufficiency of the evidence in a civil or criminal case, as Judge Learned Hand put it, the question is whether it "will rationally support a finding in favor of the party having the affirmative." *United States* v. *Sherman*, 171 F. 2d 619, 621 (2 Cir. 1948), cert. denied *sub nom. Grimaldi* v. *United States*, 337 U. S. 931 (1949).

A verdict will "normally be directed where both the facts and the inferences to be drawn therefrom, as supported by the overwhelming weight of the evidence, point so strongly in favor of one party or the other that the court feels reasonable men could not possibly come to a contrary conclusion." 5 Moore, *Federal Practice* (2d Ed. 1951) ¶50.02, P. 2314; *Gunning* v. *Cooley*, 281 U. S. 90, 94 (1930). Indeed, "where proven facts give equal support to each of two inconsistent inferences," this Court has said, "judgment, *as a matter of law*, must go against the party upon whom rests the necessity of sustaining one of those inferences as against the other, before he is entitled to recover." *Pennsylvania Railroad Co.* v. *Chamberlain*, 288 U. S. 333, 339 (1933). And "the essential requirement is that mere speculation be not allowed to do duty for probative facts." *Galloway* v. *United States*, 319 U. S. 372, 395 (1943), reh. denied 320 U. S. 214 (1943).

These same rules apply, of course, to private actions under the antitrust laws. Petitioners' burden was to prove causal connection to a "reasonable certainty," or a "reasonable probability" or to a "fair degree of certainty" (*supra*, p. 52). The evidence must be "substantial." *Rushing* v. *Metro-Goldwyn-Mayer Distributing Corp. of Texas*, 214 F. 2d 542, 544 (5 Cir. 1954). No more than in other fields may a jury verdict rest on "speculation, surmise, and conjecture." *Wolfe* v. *National Lead Company*, 225 F. 2d 427, 433-434 (9 Cir. 1955), cert. denied 350 U. S. 915 (1955). Here too the Court of Appeals, in testing the sufficiency of the evidence, is entitled to disbelieve the testimony of petitioners' witnesses when such testimony is inconsistent with the facts, circumstances and documentary evidence. *Milwaukee Towne Corp.* v. *Loew's Inc.*, 190 F. 2d 561, 567 (7 Cir. 1951), cert. denied 342 U. S. 909 (1952). And, as in any other case, it may disregard petitioners' self-serving conclusions where they "offered no evidence to substantiate such conclusions." *Rushing* v. *Metro-Goldwyn-Mayer Distributing Corp. of Texas*, 214 F. 2d 542, 544 (5 Cir. 1954).

B. The Evidence Was Palpably Insufficient to Support a Verdict for Petitioners

Petitioners' four ventures in the vanadium business have been discussed at length (*supra*, pp. 14-29), together with the reasons petitioners allege for their failure (*supra*, pp. 29-43). We have discussed, in their proper time sequence and with reference to the ventures to which they were supposed to relate, each of petitioners' thirteen so-called "requests for vanadium oxide from respondents" (*supra*, pp. 31, 32-33, 39, 42).

These facts need not be reviewed again. Nor is it necessary here to meet each of petitioners' trifling disagreements with the Court of Appeals' summary of the evidence (Pet. Br., pp. 100-111).

Petitioners, of course, had to prove good faith requests for oxide from respondents. Obviously they could not have been damaged by the denial of what they did not request. As stated in *Royster Drive-In Theatres, Inc.* v. *American Broadcasting-Paramount Theatres, Inc.*, 268 F. 2d 246, 251 (2 Cir. 1959), cert. denied 361 U. S. 885 (1959):

> "Finally, appellant complains that its failure to make a demand to the distributors should not be considered fatal to its claim. * * * As we have previously held, and recently reiterated: '[P]laintiffs cannot recover damages on account of any failure to obtain feature pictures for first-run exhibition unless they made demand for that of which they now claim they were deprived by the conspiracy.' J. J. Theatres, Inc. v. Twentieth Century Fox Film Corp., 2 Cir., 1954, 212 F. 2d 840, 845, quoted and followed in Webster Rosewood Corp. v. Schine Chain Theatres, Inc., 2 Cir., 1959, 263 F. 2d 533, 536; accord, Milwaukee Towne Corp. v. Loew's Inc., 7 Cir., 1951, 190 F. 2d 561, 568, certiorari denied, 1952, 342 U. S. 909, 72 S. Ct. 303, 96 L. Ed. 680." [28]

But the sporadic requests and refusals themselves do not prove petitioners' cause of action. They must also prove they were injured by the refusals of their requests. Petitioners add nothing by their suggestion that their thirteen alleged requests were "jointly refused" (Pet. Br., p. 95), when only twice over a period of four years—in June 1941 and in November 1943—did petitioners make contemporaneous or similar "requests" of both VCA and Electromet, and on both occasions received separate and different replies (Ex. 41, R. 271-272; Ex. 42, R. 273; *supra*, p. 42 note).

---

[28] Also in accord: *Lawlor* v. *National Screen Service Corporation*, 270 F. 2d 146, 153 (3 Cir. 1959), cert. denied 362 U. S. 922 (1960); *Columbia Pictures Corp.* v. *Charles Rubenstein, Inc.*, 289 F. 2d 418, 421 (8 Cir. 1961); *Standard Oil Company of California* v. *Moore*, 251 F. 2d 188, 198-199 (9 Cir. 1958).

There is still no injury to them on a record which fails to show that the supplies of oxide they had obtained from respondents and others were inadequate or that they ever lost a single sale because of lack of oxide. Nor is there any injury attributable to respondents where the evidence demonstrates that whatever difficulties petitioners may have had were actually the result of wartime shortages and restrictions. See *Wolfe* v. *National Lead Company*, 225 F. 2d 427, 433-434 (9 Cir. 1955), cert. denied 350 U. S. 915 (1955).

Nor did the Court of Appeals require that petitioners prove, as they now argue, that they also "sought and exhausted every conceivable alternative source of supply" (Pet. Br., p. 95). The Court of Appeals merely noted, as the uncontradicted evidence shows, that petitioners had other established supplies and sources available at the times they claim they were injured by respondents' alleged refusals, and this availability was certainly material. *Standard Oil Company of California* v. *Moore*, 251 F. 2d 188, 198 (9 Cir. 1958).

So too petitioners add nothing by the inclusion in their legal argument of various other distortions of the record and inferences which cannot rationally be supported by the record. Thus, nothing is added by petitioners' references to "shattering injurious impact" when they attempt to support it by such statements as that "Apex was not obtaining sufficient quantities of oxide to run its mill at half capacity" (Pet. Br., p. 96)—when the uncontradicted evidence shows that Apex had all the oxide it needed and when the document on which petitioners rely itself shows even more oxide was available.[29] No less transparent

[29] Petitioners cite "D's. V's. Ex. V-1-A; R. 2512A, 1142" (Br., p. 96). Presumably they intended to refer to Exhibit V-1-Q at R. 2512A, and not to Exhibit V-1-A which was received in evidence at R. 1002 and is reprinted at R. 2487-2488.

Exhibit V-1-Q is a letter from Apex to Leir dated September 17, 1941 (R. 2511-2512A). It shows that Apex could then obtain

on the record before this Court is petitioners' claim that, "just before termination of its relationship with petitioners, Apex was unable to obtain oxide supplies after repeated requests" (Pet. Br., p. 96).[30]

Equally frivolous is petitioners' argument that "Apex capitulated shortly after Blanding Mines informed it that Blanding could no longer supply it with a supply of oxide" (Pet. Br., p. 96)—in the face of uncontradicted evidence that Apex had about 50,000 pounds of oxide on hand (*supra*, p. 34); that Apex had received no oxide from Blanding in about a year (*supra*, pp. 36-37); that it had at least one other very substantial regular supplier who continued with Apex and thereafter with Leir (*supra*,

---

regular supplies of oxide from National Vanadium, but declined the opportunity (R. 2512; see also *supra*, p. 32).

Other uncontradicted evidence precludes the inference that Apex at that time was unable to obtain oxide. Only a month later Apex wrote Leir that Shattuck had been shipping 12,000 to 18,000 pounds of oxide "to us every couple of weeks" (Ex. V-1-S, R. 1155-1157). At the end of the year Apex had over 45,000 pounds on hand (Ex. 143, R. 1306-1307).

Perhaps Apex did not think operations at more than half capacity were warranted by the demand for its ferrovanadium. Perhaps the explanation is in the testimony of an Apex officer that it was not "until sometime late in 1941" that it completely solved its production difficulties (R. 1351). Perhaps there were other reasons but, whatever they were, shortage of oxide or acts of respondents were not among them.

[30] Here petitioners rely on Apex's December 1941 request of Defense Plant Corporation for part of the output of the new plant then being erected at Monticello, Utah (Ex. 144, R. 2266, 1313).

One simple answer is that Apex, at the time of its request, was not even in operation because it was rebuilding the plant destroyed by a fire (*supra*, p. 34 note). Another is that Apex then had almost 50,000 pounds of oxide on hand (*Ibid.*). Still another is that the request—which was to Defense Plant Corporation, not respondents—led the next month to what Leir himself said were assurances of ample supplies (Ex. V-2-A, R. Vol. IX 603, R. 1176) and to what petitioners themselves here claim were "assurances of governmental cooperation in obtaining additional supplies" (Pet. Br., pp. 104-105).

pp. 32, 35); that Apex had previously made clear its desire to discontinue vanadium operations for other reasons (*supra*, pp. 16-19); that its subsequent decision to discontinue was not related to oxide supplies (*supra*, pp. 16-20, 34-35); and Leir's own testimony that Apex, at the time of the termination, was able to get supplies (R. 1175).

Nor can petitioners reasonably infer that "VCA had interfered with Apex so as to cause petitioners' manufacturing associate Apex to leave the vanadium business" (Pet. Br., p. 99; see also p. 105)—when the uncontradicted evidence is that Apex approached VCA to see whether it would be interested in buying its supplies and equipment after it had served repeated notices on Continental that it was discontinuing operations and when VCA's total "interference" was to purchase, two months later, Apex's supply of magnesite (*supra*, pp. 20, 36).

The varied other claims have no more to support them. The entire record on causation can be read as a whole, and petitioners may have the benefit of all inferences and presumptions the evidence can support. It still cannot rationally support the necessary finding of causal connection because the indisputable evidence is that none of the alleged acts of any of the respondents contributed in any way to petitioners' alleged injury or damage (*supra*, pp. 16-20, 30-37).

Certainly, no jury could find that the alleged refusals to sell oxide to petitioners injured them in their three manufacturing ventures when the record also shows that petitioners had adequate supplies of oxide and that additional supplies were available (*supra*, pp. 30-39, 41-42). Nor could the jury infer anything about the fourth venture, the mysterious "pending negotiations" with Climax—even assuming interference with negotiations can cause an injury to business, contrary to *Feller* v. *International Boxing Club, Inc.*, 227 F. 2d 593 (7 Cir. 1955). The record never dis-

closed what the negotiations were, whatever happened to them, or in what way respondents are supposed to have interfered with them (*supra*, pp. 24-27, 40). A recovery on this record would be merely for the alleged public wrong which might support a Government action and without regard to any private injury to petitioners, contrary to the statute and all the decided cases (*supra*, pp. 48-60).

QUESTION 3

Evidence of the acts of a Union Carbide subsidiary as an agent of the Canadian Government was properly excluded.

There remains only the question whether petitioners can claim damages from respondents for their elimination in 1943 from the Canadian market, alleged to have been effected by a Union Carbide subsidiary in Canada acting as a wartime agent of the Canadian Government (Question 2, Pet. Br., pp. 4-5).

The trial court had instructed the jury that acts of this Carbide subsidiary, Electromet of Canada, "performed as an agent of the Canadian Government . . . would not be a basis for liability on the part of Union Carbide" (R. 2036-2037).[31] The Court of Appeals agreed: Electromet of Canada "was acting as an arm of the Canadian Government, and we do not see how such efforts as appellants claimed defendants took to persuade and influence the Canadian Government through its agent are within the purview of the Sherman Act. See *Eastern Railroad Presi-*

[31] This instruction was not assigned as error in the Court of Appeals and therefore any error in it was waived. *Richfield Oil Corp.* v. *Karseal Corp.*, 271 F. 2d 709, 722 (9 Cir. 1959). Petitioners, however, did assign as error the exclusion of certain evidence with respect to the Canadian episode (R. 2058).

dents Conference v. *Noerr Motor Freight, Inc.*, 81 S. Ct. 523, 5 L. Ed., 2d 464" (R. 2580).

We will not discuss in detail the facts on which petitioners rely. Moreover, we again leave to the brief of the Union Carbide respondents the question of the authority of the Electromet employee Arrouet to act for them (*supra*, p. 40 note). But it must be noted in behalf of VCA that petitioners' offer of proof was limited to alleged acts and statements of employees of the Union Carbide respondents and did not implicate VCA. Thus petitioners offered to prove that Electromet of Canada was "acting under instructions from the officials of Union Carbide or its affiliates in order to eliminate the plaintiff from the Canadian market" (R. 827), "that it was the Carbide officials and employees which directed their wholly-owned and controlled subsidiary . . . to eliminate the plaintiff from the Canadian market" (R. 828), and "that it was the intent and purpose of the Carbide officials and employees to use the Canadian agency for the purpose of restraining the plaintiff's trade, and specifically for the purpose of carrying out the conspiracy to restrain and to monopolize the vanadium industry in the United States and Canada" (R. 828).

Nowhere in his offer of proof did petitioners' counsel charge that VCA knew anything about the acts of Carbide or its subsidiaries with respect to Canadian sales or that the offered proof would link those acts to any alleged conspiracy with VCA. Nothing in it supports petitioners' present characterization of the proof in its brief—*e.g.*, that "Union Carbide conspired with the other respondent VCA to use the Canadian subsidiary" (Pet. Br., p. 113) and that Electromet of Canada's agency relationship with the Canadian Government "was used by Union Carbide and VCA to further their monopoly and conspiracy" (*Id.* at 124).

Even if it be assumed that petitioners' offer of proof was sufficient to include VCA and that the facts are as petitioners contend, the damages they claim for their elimination from the Canadian market are nonetheless not recoverable from these respondents.

Petitioners conceded in their complaint and at the trial—as they concede here (Pet. Br., p. 113)—that Electromet of Canada was in fact the agent of the Canadian Government for the purchase and allocation of vanadium for Canadian steel firms (R. 19-20, par. 36; R. 809). They have no question about the appointment of Electromet of Canada or of the statute under which it was appointed (R. 809). Moreover, they emphasize that this is not an action against the Canadian Government and that neither that Government nor its Office of Metals Controller is charged with any illegality in this case (Pet. Br., pp. 112, 114).[32]

Only a limited issue is presented here. It does not involve the power of an American court to enjoin the alleged activities of the Union Carbide affiliates in this country or the admissibility of the evidence of such activities in support of a claim that the law has been violated. Petitioners in this private action now claim injury and damages only for the

---

[32] Electromet of Canada was never served (R. 830) and no objection of sovereign immunity has been interposed.

It is evident, however, that Electromet of Canada, engaged in the wartime purchase and allocation of essential vanadium, was performing a vital government function. For instance, the "supplying of oil to insure the maintenance and operation of a naval force—and in this day and age, an air force—is certainly a fundamental government function serving a public purpose. See Berizzi Bros. v. The Pesaro (1926), 271 U. S. 562, 46 S. Ct. 611, 70 L. Ed. 1088." *In re Investigation of World Arrangements, etc.*, 13 F. R. D. 280, 290 (D. D. C. 1952). Electromet of Canada, acting as its agent, was indistinguishable from the Canadian Government and clearly it would enjoy sovereign immunity for acts done as agent of the government (*Id.* at 291).

concededly valid final act of the Canadian Government—its refusal to buy Van Ex from them for a Canadian steel firm. And this is the act, with the necessary inquiry into its propriety and motivation, that precedent and policy place beyond the Sherman Act and which the courts in this country will not judge.

It has long been settled, of course, that "[e]very sovereign State is bound to respect the independence of every other sovereign State, and the courts of one country will not sit in judgment on the acts of the government of another done within its own territory." *Underhill* v. *Hernandez*, 168 U. S. 250, 252 (1897); *Oetjen* v. *Central Leather Company*, 246 U. S. 297, 303 (1918); *Ricaud* v. *American Metal Company, Limited*, 246 U. S. 304, 309 (1918). Both courts below recognized that petitioners' position, however phrased, necessarily required a forbidden inquiry into, and a determination with respect to, the acts of a sovereign power.

The trial judge, in the extended colloquy with counsel, repeatedly gave this simple basis of his exclusion of the offered evidence (R. 803-839). For instance, "[t]he final act was the act of the Canadian Government. . . . we can't say that what the Canadian Government did was right or wrong. We accept it as it is" (R. 812). "It would be in the nature of this court reviewing an act of the Canadian Government" (R. 816). Finally, "we cannot review a decision by the Canadian Government; it is not within the jurisdiction of this Court" (R. 832). The Court of Appeals was affected by these same considerations. It could not see how the alleged acts of Electromet of Canada "acting as an arm of the Canadian Government" or the other alleged efforts "to persuade and influence the Canadian Government through its agent," were within the purview of the Sherman Act (R. 2580).

The Court of Appeals' reference to *Eastern Railroad Presidents Conference* v. *Noerr Motor Freight, Inc.*, 365 U. S. 127 (1961), was altogether appropriate. *Noerr* is more than the "narrow and specific holding" that petitioners read in it (Pet. Br., p. 120). In *Noerr* the individual truck operator plaintiffs also claimed to be injured by governmental action—there the veto of the "Fair Truck Bill" by the Governor of Pennsylvania (365 U. S. at 130). And this Court in *Noerr* restated the rule of *United States* v. *Rock Royal Co-operative, Inc.*, 307 U. S. 533 (1939), and *Parker* v. *Brown*, 317 U. S. 341 (1943)—"where a restraint upon trade or monopolization is the result of valid governmental action, as opposed to private action, no violation of the Act can be made out" (365 U. S. at 136). "These decisions," it explained, "rest upon the fact that under our form of government the question whether a law of that kind should pass, or if passed be enforced, is the responsibility of the appropriate legislative or executive branch of government so long as the law itself does not violate some provision of the Constitution" (*Ibid.*).[33]

United States v. *Rock Royal Co-operative, Inc.*, 307 U. S. 533, 560 (1939), was an action to compel compliance with an order of the Secretary of Agriculture which had allocated market areas and fixed minimum prices of milk, just as the Canadian Government through Electromet had regulated the purchase and allocation of vanadium in Canada. This Court there rejected the defense that the order had been adopted pursuant to a conspiracy of milk

[33] Subsequent decisions in *Baltimore & Ohio Railroad Company* v. *New York, New Haven & Hartford Railroad Company*, 196 F. Supp. 724 (S. D. N. Y. 1961), and *Parmalee Transportation Company* v. *Keeshin*, 292 F. 2d 794 (7 Cir. 1961) relied on *Noerr* in holding that attempts to influence the actions of the Interstate Commerce Commission were not within the purview of the Sherman Act irrespective of defendants' motives in seeking such action.

producers to obtain a monopoly in violation of the Sherman Act. Later, in *Parker* v. *Brown*, 317 U. S. 341, 350-351 (1943), this Court held the Sherman Act did not apply to a state regulatory system or restrain "a state or its officers or agents from activities directed by its legislature." Still later in *Noerr* this Court said of *Rock Royal Co-operative, Inc.* (365 U. S. at 139):

> "It is neither unusual nor illegal for people to seek action on laws in the hope that they may bring about an advantage to themselves and a disadvantage to their competitors. This Court has expressly recognized this fact in its opinion in *United States* v. *Rock Royal Co-op.*, where it was said: 'If ulterior motives of corporate aggrandizement stimulated their activities, their efforts were not thereby rendered unlawful. *If the Act and Order are otherwise valid, the fact that their effect would be to give coöperatives a monopoly of the market would not violate the Sherman Act . . .*'"

Thus *Noerr* reaffirmed the rule that damages may not be claimed under the Sherman Act for consequences of valid government actions, and gave further support to the fundamental refusal to judge acts of sovereigns. The same rule had been applied much earlier to acts of foreign sovereigns in *American Banana Co.* v. *United Fruit Co.*, 213 U. S. 347 (1909). The Sherman Act was there held inapplicable to defendant's successful efforts, with the help of the Costa Rican Government acting at its instigation, to exclude plaintiff from the Central American banana trade with the United States. The Court there said (213 U. S. at 357):

> "We think it entirely plain that what the defendant did in Panama or Costa Rica is not within the scope of the statute so far as the present suit is concerned."

specified by petitioners in that Court so that, if none is shown to have occurred or to have prejudiced petitioners, respondents may retain the benefit of the jury verdict in their favor and the affirmance of the judgment may stand.

Dated, March 31, 1962.

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, a partnership, et al.,

Petitioners,

vs.

UNION CARBIDE AND CARBON CORPORATION, et al.,

Respondents.

BRIEF OF RESPONDENTS UNION CARBIDE CORPORATION AND UNITED STATES VANADIUM CORPORATION

HERBERT W. CLARK,
RICHARD J. ARCHER,
GIRVAN PECK,
Crocker Building, San Francisco 4, California,
Attorneys for Respondents Union Carbide Corporation and United States Vanadium Corporation.

MORRISON, FOERSTER, HOLLOWAY,
SHUMAN & CLARK,
Of Counsel.

Moreover, it explained (*Id.* at 358):

> "The fundamental reason why persuading a sovereign power to do this or that cannot be a tort . . . is that it is a contradiction in terms to say that within its jurisdiction it is unlawful to persuade a sovereign power to bring about a result that it declares by its conduct to be desirable and proper. *It does not, and foreign courts cannot, admit that the influences were improper or the results bad. It makes the persuasion lawful by its own act. The very meaning of sovereignty is that the decree of the sovereign makes law.*"

And it was immaterial that the allegedly unlawful conspiracy in *American Banana* had roots in this country, just as it is immaterial here that petitioners may claim Electromet of Canada was directed by Union Carbide in New York. As the Court said in *American Banana* (*Id.* at 359) and later repeated in *United States* v. *Sisal Sales Corporation*, 274 U. S. 268, 276 (1927):

> "A conspiracy in this country to do acts in another jurisdiction does not draw to itself those acts and make them unlawful, if they are permitted by the local law."

Petitioners do not cite *American Banana*. Needless to say, its authority continues where, as here, a plaintiff's claim for damages is based on "acts done outside the United States and not unlawful by the law of the place." *United States* v. *Sisal Sales Corporation*, 274 U. S. 268, 275-276 (1927). Still more recently this Court stated with respect to *American Banana*—"This Court agreed that a violation of American laws could not be grounded on a foreign nation's sovereign acts." *Steele* v. *Bulova Watch Co., Inc.*, 344 U. S. 280, 288 (1952).[34]

---

[34] Petitioners here rely on *Sisal* and other cases holding that Congress may in some circumstances control the conduct of Amer-

Thus established principles of comity and sovereign immunity, and the limitations on the extraterritorial application of the antitrust laws, require the conclusion that the Sherman Act did not apply and petitioners' evidence was properly excluded.

CONCLUSION

The judgment of the Court of Appeals was in all respects correct and should be affirmed.

We also submit that if this Court should find error on either of the first two questions discussed in this brief (*supra*, pp. 48-70), the proper relief is not the remand to the District Court for retrial which petitioners request (Pet. Br., p. 127). Rather the case should be remanded to the Court of Appeals for consideration of the errors

---

ican citizens beyond the territorial limits of the United States (Pet. Br., pp. 117-119).

No one disputes this rule. But in *Sisal* the Court had found the circumstances there "radically different" from those in *American Banana* (274 U. S. at 275). The distinction, this Court later repeated, is that in *Sisal* "the crux of the complaint" was "'not merely of something done by another government at the instigation of private parties;' . . . ." *Steele* v. *Bulova Watch Co., Inc.*, 344 U. S. 280, 288 (1952).

Nor does *United States* v. *Deutsches Kalisyndikat Gesellschaft*, 31 F. 2d 199 (S. D. N. Y. 1929)—on which petitioners place so much reliance (Pet. Br., pp. 117-118)—make corporations liable for acts performed as agents of foreign governments. The corporation there, although partly owned by the French government, was engaged in a purely commercial venture of selling products in the United States (31 F. 2d at 200). This venture was "entirely divorced from any governmental function" and there is a "vast distinction" between a government serving a governmental function and one "seeking additional revenue in the American markets and causing a direct injury in the United States to our domestic commercial structure." *In re Investigation of World Arrangements, etc.*, 13 F. R. D. 280, 291 (D. D. C. 1952).

There was no evidence of the claimed interference with petitioners' business relations 44

There was no evidence of any interference with Apex 44

There was no evidence of the claimed interference with Climax and with Continental's business in Canada 46

There was no evidence of any interference with any plan to build a mill 56

IV

Petitioners avoided and omitted all pertinent evidence relating to the asserted loss of sales and profits 57

There was no evidence of lost sales 57

There was no evidence of lost profits 60

V

As a matter of law, the record fails to show any injury or damage 62

There is no evidence of wrongful acts having a tendency to injure petitioners 65

There was no evidence of loss of sales or loss of profits 70

Upon all aspects of the claim petitioners failed to tender an issue 73

VI

Assuming there was evidence of any inducement of the Canadian government's act of refusing to buy from petitioners, neither the act nor the inducement would give rise to antitrust liability 75

The acts of an agent of a foreign government in its own jurisdiction are not within the antitrust laws and cannot be called into question 78

The act of inducing a government or governmental agency to exercise governmental powers is not cognizable 83

No action for damages can be based upon the governmental act in Canada 86

In the Supreme Court
OF THE
United States

OCTOBER TERM, 1961

No. 304

CONTINENTAL ORE COMPANY, a partnership, et al.,
Petitioners,
vs.
UNION CARBIDE AND CARBON CORPORATION, et al.,
Respondents.

BRIEF OF RESPONDENTS UNION CARBIDE CORPORATION AND UNITED STATES VANADIUM CORPORATION

OPINION BELOW

The opinion below is as stated in petitioners' brief.

JURISDICTION

The jurisdiction of this Court is as stated in petitioners' brief.

STATUTES INVOLVED

In addition to the provisions of the Sherman and Clayton Acts cited and quoted in petitioners' brief, the following are pertinent:

Act of May 24, 1949, Chapter 139, Section 110, 63 Stat. 105, 28 U.S.C. Sec. 2111:

> "On the hearing of any appeal or writ of certiorari in any case, the court shall give judgment after an examination of the record without regard to errors or defects which do not affect the substantial rights of the parties."

Rule 61, Federal Rules of Civil Procedure:

> "No error in either the admission or the exclusion of evidence and no error or defect in any ruling or order or in anything done or omitted by the court or by any of the parties is ground for granting a new trial or for setting aside a verdict or for vacating, modifying or otherwise disturbing a judgment or order, unless refusal to take such action appears to the court inconsistent with substantial justice. The court at every stage of the proceeding must disregard any error or defect in the proceeding which does not affect the substantial rights of the parties."

QUESTIONS PRESENTED

Each of the questions set forth in the writ of certiorari is taken word for word from the petition. In each, the wording has no substantial relationship to the evidence in the case or the proceedings below, and so entirely misstates the issues presented by the record.

The questions actually presented by paragraphs 2 and 6 of the writ of certiorari are in substance the same: whether the court below correctly affirmed the judgment entered upon a jury verdict upon the ground that plaintiffs wholly failed to prove any injury. This question requires solely a review of the evidence. No legal issue is presented.

Two questions are presented by paragraph 5 of the writ of certiorari. The first is the factual question whether there was any evidence that any respondent influenced the Government of Canada, or its agent, a subsidiary of one of the respondents, to decline to buy from petitioners, or that any respondent had anything to do with petitioners' asserted elimination from the Canadian market. The second is the legal question whether, assuming there was evidence of influence, as the court below assumed for the purposes of its opinion, such influence would be cognizable under the antitrust laws.

STATEMENT OF THE CASE

The Proceedings Below.

This action was begun on July 15, 1949 (R. 25). It followed and purported to rely on a criminal case against the same group of defendants filed on September 2, 1948,[1] entitled *United States v. Union Carbide and Carbon Corporation, et al.*, No. 11678, in the United States District Court for the District of Colorado. On June 4, 1957, how-

[1] An indictment against the same defendants was filed on June 1, 1946, and then dismissed on September 2, 1948, when the information was filed.

ever, the Government action was terminated, after a jury trial, by the acquittal of all defendants. No civil suit was brought by the Government at any time.

On June 2, 1958, the present case was brought to trial in the United States District Court for the Northern District of California (R. 110). The defendants in the trial court, respondents here, moved for a directed verdict "on the ground that upon the facts and the law the plaintiff has shown no right to relief" (R. 1989),[2] and the court reserved its ruling on the motion (R. 1989). Thereafter, the jury returned a verdict for the defendants (R. 2051) and the trial court noted its concurrence with such verdict (R. 2052). Judgment was entered upon the verdict (R. 104-05) and plaintiffs appealed (R. 105-06).

Upon appeal to the Court of Appeals for the Ninth Circuit, the "complete record and all of the proceedings and evidence in the above entitled action" were designated by petitioners. The parties designated for printing the entire transcript of testimony (See Appendix A hereto) and stipulated that all exhibits not printed could be considered on the appeal (R. 2057). Following the submission of briefs and oral argument, the Court requested supplemental "memoranda . . . pointing to every specific place in the record where there is testimony or documentary evidence which will show or tend to show" the cause of termination of each of petitioners' ventures in vanadium (Appendix B hereto) and such memoranda were furnished by both sides. Thereafter it entered judg-

[2]Respondents also filed a brief in support of the motion, stating the specific grounds therefor, which were in substance that there had been a total failure of proof as to each aspect of the case.

ment of affirmance on March 22, 1961 (R. 2583). Rehearing was denied on May 15, 1961 (R. 2584).

The Court in its opinion, written by Judge Magruder of the Court of Appeals for the First Circuit, considered all evidence offered, whether it was received or not. It assumed, without attempting to decide, that antitrust violations were shown, but concluded, in the light of the undisputed records and admissions, that petitioners' claims of injuries caused thereby were without basis in fact.

The Parties.

The petitioners in this Court, appellants below, are copartners doing business under the name of Continental Ore Company. The principal and directing partner is Henry J. Leir, the others being his wife and mother-in-law. The vice president of Continental was and is Martin Wolf. Continental is and has been engaged in the business of buying and selling a variety of ores and minerals.

The respondents, appellees below, are:

Union Carbide and Carbon Corporation (Carbide) which is now known as Union Carbide Corporation;

United States Vanadium Corporation (USV), a subsidiary of Carbide when the complaint was filed but now merged with Carbide, which owned mines and vanadium oxide mills; and

Vanadium Corporation of America (VCA) which has no connection with the first two respondents.

Three other subsidiaries of Union Carbide are also named in the complaint as defendants but were never served, and therefore are not respondents here. They are

Electro Metallurgical Company (Electromet or EM), a Carbide subsidiary until its dissolution on January 5, 1949, which made ferrovanadium from vanadium oxide; Electro Metallurgical Sales Corporation (Electromet Sales or EMS), a Carbide subsidiary until its merger with Carbide on March 14, 1949, which sold vanadium products; and Electro Metallurgical Company of Canada (Electromet of Canada), a Canadian corporation and a Carbide subsidiary, which sold ferrovanadium and vanadium oxide.

The Background of the Case.

A. The Vanadium Industry and the War.

The setting of the present case is the vanadium industry in the United States, from 1938, when the appellants took their first step toward entering the business, until 1949, when the lawsuit began. Some of the basic characteristics of the industry and of the wartime period are necessary to an understanding of the case.

Vanadium is found principally in ores, much of which also contain uranium. The ores are concentrated to form red oxide (red cake), then are fused into a black oxide known variously as vanadic acid, vanadium oxide, vanadium pentoxide, or V_2O_5, and then converted into ferrovanadium. This is the end product which is used to strengthen steel.

Vanadium-bearing ores themselves are plentiful. Petitioners' witness, Burwell, so testified (R. 139) as did respondents' witness, Hill (R. 1553). Leir himself conceded that anyone could go out on the Colorado Plateau, find the ore, mine it, and mill it (R. 1199).

Compared with other competing alloys, however, vanadium was and is expensive, and consequently its use has been for many years in a long-term declining trend. Burwell so testified (R. 146), and witnesses from Crucible Steel (R. 1682) and United States Steel (R. 1528) entirely agreed.

The downward drift of the industry was sharply interrupted by the advent of World War II in 1939. Vanadium, as an essential component for armor plate, tank parts, aircraft parts and other implements of war (R. 1526, 1528), experienced a strong upsurge in demand (Ex. 2, Vol. VIII R. 7, 8, 10, R. 113; Ex. 3, Vol. VIII R.11-17, R. 114).

At first, the new demand was principally from abroad. Traders, like the petitioner Leir, sold largely for export until July, 1940, when the embargo on exports took effect (R. 1233-34). The Union Carbide companies, then having a surplus of oxide and excess milling capacity (R. 1578), succeeded in selling most of it to Europe in the year 1939 (R. 148-49). VCA, at the request of the United States, sold 712,000 pounds of oxide to France, although it then had to balance its supplies by purchases from USV under the "Maggie C" contract (R. 1829-31).

Thereafter, as the United States involvement grew deeper, and the embargo took effect, the industry prepared directly for defense needs in the United States. "Uncle Sam needed the vanadium," as Burwell said (R. 160). In August, 1941, for example, the Government was asking VCA to increase its production from an annual rate of 2,700,000 pounds of vanadium to 4,000,000 pounds by the end of 1942 (Exhibit V-2-O; R. 1838-39, 1837). VCA re-

habilitated its idle plant at Naturita, Colorado, in 1939 and started operations there in 1940; by 1942 VCA had begun its operation of the plant built by the Government in Monticello, Utah; USV erected its new mill at Rifle, Colorado, in 1942 and continued the stepped-up operation of its mill at Uravan (Exhibit 6; R. 2069-71, 116; R. 1833).

The war brought in its train a set of sweeping controls. Vanadium was allocated by the War Production Board,[3] restricted by export and import controls,[4] and regulated as to price.[5]

More important in the context of the present case were the huge wartime programs for the acquisition and stockpiling of vanadium and uranium-bearing ores. Two subsidiaries of Union Carbide, as agents of the Government, assisted in the programs.

In early 1942, the respondent USV was appointed agent for Metals Reserve Company (MRC), a Government-owned corporation with authority to acquire ore for the United States (Exhibit U-B, R. 2358-63, 367; Exhibit U-D, R. 2369-81, 373). It proceeded to do so, paying such prices as were necessary. From the Government's point of view the MRC program was expensive, but successful: by the beginning of the year 1944, MRC had amassed a stockpile of about 1,500,000 pounds of vanadium contained in

[4]Exhibit U-5-P, R. 1367-68; Exhibit V-2-P, R. 1865-68; General Imports Order M-63, December 28, 1941.

[5]Exhibit V-2-M, R. 1728, R. 2555-64; Exhibit U-5-D, R. 2462-66, 987.

V_2O_5, or about 3,000,000 pounds of oxide (Exhibit U-4-T, R. 2457, 968; Exhibit U-R, R. 2413, 437).

In early 1943, Union Mines Development Company, another subsidiary of Union Carbide, entered into a nonprofit contract with the United States Army (Manhattan District) to proceed "with the utmost secrecy and dispatch" to acquire "the strongest possible control" of the sources of uranium for the Government (Exhibit U-Q, R. 2397, 2403, 418). The result was that not only were large supplies of uranium acquired by the Manhattan District atomic bomb project, but vanadium as well. By September 30, 1944, the Army Engineers had built up a stockpile of vanadium oxide, as received from the Grand Junction mill, amounting to over 723,000 pounds, a supply which increased steadily until it reached about 1,600,000 pounds in February, 1946 (Exhibit U-5-T, R. 2485, 1985).

Thus, the Government programs resulted in a glut of vanadium by 1944 as the arms build-up tapered off and the end of the war approached. The program specifically designed to expand the supply of vanadium had succeeded and was terminated. The uranium program, which continued in operation, necessarily added more unwanted vanadium to the already bulging stockpiles.

B. The Petitioners' Ventures in Vanadium.

Continental's activities in vanadium closely coincide in time with the period of wartime demand and shortage. The first sales were in mid-1939. Volume rose rapidly in 1940 and 1941, quadrupled by 1942, then declined sharply in 1943, and dwindled to insignificance by 1944 and 1945. Sales after 1945 were negligible (Exhibit 119, R. 2212, 1090).

Continental's business as a whole was in a variety of metals and minerals, vanadium being a small part of its activities (R. 1083-86). It never made any permanent commitment to the vanadium industry. It built no plant or mill and the only permanent equipment it bought was a mixing container or "pebble mill" which cost less than $500 and was retained for only a few months (R. 1211-15). Continental had no regular employees with training or practical experience in metallurgy, in vanadium or otherwise (R. 910-11). Leir considered it "irrational" to stockpile vanadium in advance of proven demand (R. 1233) and preferred to let other companies associated with him make commitments to suppliers.[6] Thus the company maintained itself in an entirely flexible position, able to trade in whatever was in demand at any given time.

Continental's first and major venture in the vanadium business was with Apex Smelting Company, an aluminum processor. Leir, on behalf of a French associate, Brignoud, made a contract with Apex in July, 1938, providing that Apex would make ferro alloys, including vanadium. Leir was to procure the supplies and sell the finished product for Apex and share in the Apex profits. The technical knowledge was to come from Brignoud in France (Exhibit 117, R. 2187-2201, 1050; R. 1059, 1234). The processing was to be done at the Apex plant by Apex employees (R. 910) but Apex had never made ferrovanadium before (R. 800-01, 1060).

The Apex plant did not actually start production until mid-1940, two years after the contract was made (R. 1062,

---

[6]Discussed hereinafter, pages 30-37, 41-44.

1124, 1234, 1302). In the next two years, it produced about 100,000 pounds of ferrovanadium (Exhibit 119, R. 2212, 1090; R. 1351), much less than the planned capacity (R. 856, 1113). The project suffered technical setbacks and steadily lost money, and it diverted effort and time from Apex's essential aluminum business, and, for these reasons, Apex terminated the arrangement over the protests of Leir (Exhibit V-1-S, R. 1155, 1154; Exhibit V-2-A, R. 1176; Exhibit V-2-B, R. 1190-91, 2520-22, 1187; R. 1287, 1290-95).[7]

Continental's next major venture was in a product Leir called Van-Ex. Apex started to produce it for Continental; then, after Apex's termination in mid-1942, Continental produced it on its own for a few months. Almost all of the sales of Van-Ex were made in 1942 at the height of the shortage. They amounted in that year to $171,166.50, or about three-fourths of Continental's vanadium sales for the year (Exhibit 119, R. 2212, 1090).

Van-Ex was simply a repackaged vanadium oxide. The first shipment was made with an addition of a little fluorspar to conceal the composition (R. 1162) which was supposed to be "secret" (R. 842), but from then on, it was "just the plain ore" (Exhibit V-1-X, R. 1171-72; Exhibit V-1-C, R. 1007-11, 1282). The price of vanadium oxide was fixed at the time by the OPA (7 F.R. 3153; Exhibit V-2-M, R. 2555-64, 1728), but petitioners' vanadium oxide, repackaged and relabeled as Van-Ex, was sold about 20%

[7]The causes of the Apex termination are more fully set out hereinafter, pages 26-28.

higher than the OPA price (Exhibit 79, R. 2169-74, 797; R. 842, 909-10, 1161, 1172).[8]

Petitioners never sold any substantial amount of Van-Ex to American companies; they did, however, sell in quantity in 1942 to a Canadian company, Atlas Steels, Ltd. Such sales came to an end in early 1943 when the Canadian Government took over the purchasing and allocation for all the Canadian steel mills.[9]

In early 1943, Continental sought and found a new outlet for its supplies with Climax Molybdenum Company. It entered into a contract providing that Continental would ship Climax 20,000 pounds of vanadium which Climax would then convert to ferrovanadium for a fee (Exhibit 111, R. 1016-17, 1014). The contract was successfully completed, half of the materials for it being supplied by a Carbide subsidiary.[10] There is no evidence that either Continental or Climax requested or suggested a further contract.

Petitioners' final venture, with Imperial Paper & Color Corporation, never went beyond the planning stage. The agreement, made in January, 1944, was similar in substance to the Apex contract, but it contained a clause to the effect that the "contract" was contingent upon Imperial's decision whether actually to enter the field at all (Exhibit 110, R. 2175, 2178, 1014). Imperial never consummated the agreement and did not install the equip-

[8]The OPA interpreted the Act to forbid raising prices based upon a mere change of labels. Official Interpretations, 5-12-42, 5-23-42, Pike & Fischer, O.P.A. Service (1942) Vol. 1, page 11:1011, and see generally pp. 11:1012-28.

[9]Discussed in detail hereinafter pages 46-55, 75-77.

[10]Discussed hereinafter, pages 37-39.

ment for making ferrovanadium. Instead, it finally wrote Continental in December, 1944, that it did not wish to undertake the risks (Exhibit 114, R. 1022-23).[11] By that time, Continental was already, in substance, out of the vanadium business; it was refusing a flood of offers of supplies and otherwise in its contemporaneous letters exhibiting a lack of further interest in the material which had, by then, become plentiful.[12]

The Petitioners' Claims.

A. The Monopoly and Conspiracy Charges.

The complaint charges a conspiracy to commit various acts in violation of the antitrust laws. Most of the assertions, though denied, will not be discussed here because they are irrelevant to petitioners' claims of damage and were not dealt with by the court below. Two categories of glaring and repeated inaccuracy in petitioners' brief, however, must be met:

(1) No antitrust violations have ever been "confessed" or "admitted" by respondents, as petitioners repeatedly assert.[13] The accusations of Leir's friend, Burwell,[14] are

[11]Discussed hereinafter, pages 39-40.

[12]See pages 40-44.

[13]Petitioners even go so far as to misrepresent the opinion below, saying in their brief that the court of appeals "admitted" (page 68) and "conceded" (page 75) alleged antitrust violations. Of course, the lower court did not. It chose to decide the case on the causation issue "because defendants' strongest argument seems to us to apply here." (R. 2572.)

[14]Leir was a stockholder in Burwell's own "little" company (R. 519) and purchased a note of some $200,000 from the company at a discount (R. 541-42). Burwell also acknowledged that he was a competitor of the respondents (R. 516-18) and that he had had a series of policy disputes with his superiors while in the employ of USV (R. 158, 232-34, 289-90).

categorically denied here, as they were by witness after witness at the trial.[15]

(2) Petitioners in their brief list a number of "independent sources of supply" (pages 31-36) which they say were "eliminated by respondents" (page 31). They go so far as to assert that by 1945 "all of the vanadium oxide plants on the Colorado Plateau were controlled and operated by respondents" (page 63). The facts are that with the sole exception of the Durango mill, which plant USV did acquire in 1944, not a single one of the various mills mentioned in the brief (pages 31-36) was controlled and operated by respondents in 1945. The record shows the following:

Shattuck (North Continent Mines). In August, 1944, Union Mines, a Carbide subsidiary, bought North Continent for the Manhattan District at the direction of the United States Army (Exhibit U-2-F, R. 484-86) shortly after Continental declined the opportunity to buy it (R. 1205-08, Exhibit U-5-I, R. 1206).

Nisley & Wilson (Gateway Mill). After the termination of its toll agreement with the Government, the Nisley partnership sought to reopen its mill in 1944 but did not because Continental, its previous customer, refused to buy any of its output and it could find no other customers (R. 733-42). No respondent acquired it.

Blanding. The plant was allowed to revert to the Defense Plant Corporation in 1944 (R. 1728-29) after Con-

[15]Testimony of Remmers, R. 1368-1475; Priestley, R. 1475-1522; Hill, R. 1534-96; Holmes, R. 1596-1604, 1625-60; Emigh, R. 1604-25; DuTot, R. 1662-71; Colvin, R. 1672-91; Kett, R. 1806-22; Gibbons, R. 1822-60; Bransome, R. 1860-1964; Laub, R. 1964-84.

tinental declined to finance it or buy its existing supplies (R. 1713-26). No respondent acquired it.

Morrison-Ackermann (Loma Mill). The mill closed in 1941 as the result of technical difficulties and unsuitable equipment (R. 688-90, 1538-39). Thereafter Nisley bought some of its equipment (R. 644-45). Metals Reserve Company bought some of the stockpiled ore (R. 1538-39). No respondent acquired it.

Mesa. This was never a successful operation (R. 1539-40, 1544, 1597-98) and the plant and most of the equipment were abandoned for back taxes (R. 1599). USV acquired space at the mill for stockpiling (R. 1599, 1639) and certain claims on a royalty-payment basis (R. 1639-49) but never bought the mill (R. 1599-1600).

Mammoth-St. Anthony. USV negotiated to buy the production of this mill but did not do so. The production went first to Germany and then to another vanadium producer, Vitro Chemical Company (R. 177-78, 343). No respondent ever acquired the plant.

Anaconda Copper. Anaconda produced only red cake, which petitioners could not use and did not try to buy. USV bought the red cake from 1941 through 1946 but never acquired the plant or facilities (Exhibit 64, R. 2147-50, 591; R. 589, 621).

B. The Damage Claims.

Petitioners misrepresent the damage issue entirely when they assert as a fact in their brief that they were "eliminated" or "excluded" from the vanadium business, and say that the only issue is whether the "elimination" was

caused by respondents.[16] Respondents deny that there is any evidence in the record that petitioners were eliminated. In their view, all of the evidence is that petitioners were in and out of the business at will. The issues turn on whether they suffered any demonstrated injuries on the occasions when they were in the business.

As the lower court accurately stated in what respondents regard as the most significant passage in the opinion (R. 2573-74):

> "Appellants have complained of the loss of a few named, specific, business arrangements rather than a general loss inflicted by the defection of countless, individual customers. Direct evidence of causation was readily available to Continental, while in the case cited [Bigelow v. RKO Radio Pictures, Inc., 327 U.S. 251 (1946)] such direct evidence was practically impossible to come by."

Not only are the business relationships in this case specified; so is the cause of each alleged loss.

Petitioners' claims of injury, as alleged in the complaint and developed at the trial, fall into two categories:

> (1) A claim that petitioners could not secure enough supplies for their various ventures, allegedly because respondents refused to sell to them and interfered with their other sources of supply, and
>
> (2) A claim that respondents directly interfered with their business relationships with Apex and Climax and Atlas Steels.

---

[16]Petitioners also misrepresent the opinion below, saying that this "elimination" was "admitted" for the purposes of the opinion (*e.g.*, page 78). Of course this is untrue. The lower court concluded that there was no evidence at all of any elimination.

No other claims of damage were made in the complaint or sought to be proved at the trial.

Thus, the complaint specifies that the Apex contract failed "for the specific reason that it was unable to obtain vanadic acid" (Paragraph 33, R. 18). Van-Ex is claimed to have been discontinued "because [of] the difficulty of securing raw materials" (Paragraph 34, R. 18). The Imperial contract was allegedly abandoned "because of the inability of Imperial or Continental to secure vanadium oxide or vanadium-bearing ores" (Paragraph 35, R. 19).

Not only is it claimed in the complaint that in each of these arrangements appellants failed because of their inability to secure raw materials, it is also expressly denied that either the Apex or Imperial contracts failed for inability to make sales (Paragraph 35, R. 19):

> "Throughout this period of time, Continental had secured orders for all of the ferro-vanadium to be produced by Imperial and or Apex, but it was unable to fill the said orders because of the inability to secure ferro-vanadium for lack of the raw materials."

Such was the testimony at the trial. The attempted proof of damage, in fact, was all designed to show what would have been Continental's sales, based upon the hypothesis that it had had adequate sources of supply (R. 852, 856-57, 869-63, 1107-09, 1112-13).

The claims of interference are the second category. They are logically irrelevant if, in fact, petitioners were able to sell all they produced and were limited only by their supplies. Nevertheless, the claims were made and will be discussed.

The complaint does not specifically allege a direct interference with Apex, but, at the trial, petitioners sought unsuccessfully to show that VCA, which purchased some equipment from Apex after Continental had refused it and after the Apex contract was terminated, did so in order to cause injury.

The complaint does allege an interference with petitioners' Canadian business and a threat to Climax Molybdenum (Paragraphs 36, 37, 38, R. 19-21). Petitioners sought to prove both at trial by offering hearsay testimony that a non-officer employee of a Carbide subsidiary had threatened them.

For the first time on this review, the petitioners make the further claim in their brief (page 61) that respondents interfered with a plan of Leir's to build a vanadium mill. At the trial, there was no attempt to prove such interference, nor that Leir had any idea of building a mill.

The foregoing are the specific claims of injury. Each will be discussed in the remainder of this brief.

SUMMARY OF ARGUMENT

I

The overriding principle, determinative on this review, is that if the judgment of the trial court entered upon the jury verdict was right, it should stand. Similarly, if the affirmance by the court below was right, even if based in any part on the wrong reasons, it should in turn be upheld. Petitioners cannot be aggrieved if their proof shows that in fact they had no case.

II

Petitioners' specific claim of damage as to each of their ventures in vanadium is that they were unable to procure sufficient supplies and failed for that reason. Their own admissions and their own records elicited at the trial are exactly to the contrary.

During the course of the Apex contract, which lasted from mid-1938 to mid-1942, Continental and Apex continuously refused offered and available supplies amounting to many times the quantities actually used for the contract. In 1939, 1940 and 1941, they resold other supplies not needed for the business. The contract was terminated by Apex for reasons specified in its contemporaneous letters to the effect that Apex was losing money and valuable time, and there was no mention of any lack of supplies whatever. Instead, Apex complained that it could not use the supplies that Continental had procured. At the termination, Apex had on hand some 50,000 pounds of vanadium oxide.

Petitioners' business with the repackaged oxide they called Van-Ex began in 1942 and dwindled to insignificance in 1943. Leir wrote in January, 1943, that he had sufficient raw material and admitted on the witness stand that his supplies were then ample. During 1943, petitioners refused all of the output from one of their regular suppliers, amounting to 88,929 pounds of vanadium oxide, and thereafter refused numerous other offers.

Petitioners' only contract with Climax Molybdenum was in 1943. They in fact secured all their necessary supplies, one-half of the amount from a Union Carbide subsidiary, the other half from the Government agency which peti-

tioners claim was dominated by respondents. Neither Continental nor Climax showed any interest in a further contract.

In the period 1944 through 1949, petitioners had their tentative contract with Imperial. They declined to make use of their requirements contracts with respondents or otherwise to offer to buy. They refused to buy from their regular suppliers and from numerous new sources which offered them substantially unlimited quantities. They turned down a chance to buy outright the mine and mill of the biggest supplier they had.

Thus, petitioners obtained more than adequate supplies for each of their ventures, despite the wartime shortage. They were in the business only because of the shortage and left when it was over. The record is the diametrical opposite of their claim.

III

Petitioners claim other miscellaneous interferences not having to do with their supplies, but have no evidence of them.

The claimed interference with Apex was that VCA purchased some of the Apex equipment. The proof, however, was that Apex decided to dispose of it because Apex was going out of the vanadium business. The same equipment was offered to petitioners first, and they declined to purchase it.

The claimed interferences with petitioners' Canadian business and with their continued relationship with Climax both rest upon the same evidence. Petitioners offered to prove through Martin Wolf, Continental's Vice Presi-

dent, that he had a conversation with M. D. Arrouet, who was supposed to have told him that Continental should stay out of the vanadium business or else the Carbide companies would take reprisals affecting Continental and Climax. Arrouet was a non-titled employee of a Carbide subsidiary; there was no proof of his authority to speak for any respondent; and the conversation was plainly hearsay. Nor, if admitted, would it have tended to prove any injurious act; no evidence was offered that the asserted threat was adopted, approved, or acted upon by any respondent in any way.

Petitioners further suggest, for the first time on this review, that respondents interfered with their supposed plan to "build a mill." There is no evidence that they ever planned to build a mill, nor any explanation of what respondents are supposed to have done to interfere with any such plan, if they had had one.

Thus there was no evidence whatever of the claimed interferences, much less any showing of resulting injury.

IV

Not only did petitioners fail to show how any act of respondents could have injured them, they also failed to offer any evidence showing such injury in dollars and cents. They avoided the essential evidence altogether.

Petitioners never showed actual and existing demand for their vanadium. Instead they relied upon arbitrary estimates of market shares, not related to any evidence in the case. Petitioners never offered any evidence of what their net profits in vanadium, if any, actually were, or what they should have been. Instead they pointed to their

profits in other businesses, and to respondents' net profits in vanadium and uranium, and suggested arbitrary rates of net profit. Thus they invited the jury to guess that there would have been sales and guess that there would have been profits, and ignored the probative and material data which they alone could have furnished.

V

On these facts, the principles of *Bigelow v. RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946) are decisive in respondents' favor. The issue is not whether a plaintiff can use the best estimates of damage available, having shown acts which have a clear tendency to injure an otherwise profitable business. Here the issue is whether a plaintiff is permitted to recover when

(1) the specific claims of damages are disproved by its own records and admissions, or are the subject of no evidence at all, and

(2) it deliberately avoids the only figures and facts which could show whether a monetary injury actually occurred.

The *Bigelow* case itself requires that the verdict should be directed in such a case.

VI

The trial court and the court of appeals both regarded the evidence of petitioners' loss of sales in Canada as not cognizable under the antitrust laws. Respondents have already argued that the evidence was incompetent and nonprobative; they also contend that the lower courts were correct in the alternative ground they chose.

It is conceded that the Carbide subsidiary in Canada was appointed agent of the Canadian Government with the authority to purchase vanadium for the Canadian steel mills. Plainly, it was acting within the scope of its agency when it determined not to buy Continental's Van-Ex and ferrovanadium, and its decision, therefore, was that of the Government of Canada. Several principles, including the holdings in *Parker v. Brown*, 317 U.S. 341 (1943) and *Eastern R. Conf. v. Noerr Motors*, 365 U.S. 127 (1961) and the cases under the act of state doctrine, combine to the conclusion that such an act of a foreign government is not within the purview of the American statute.

ARGUMENT

I

IF THE JUDGMENT FOR RESPONDENTS IS CORRECT IN ITS RESULT, IT MUST BE AFFIRMED.

Basic to the present review is the rule, settled by this Court, that "if the decision below is correct, it must be affirmed, although the lower court relied upon a wrong ground or gave a wrong reason." *Helvering v. Gowran*, 302 U.S. 238, 245 (1937); *Brown v. Allen*, 344 U.S. 443, 459 (1953); 1 Wigmore, *Evidence*, pp. 369-70 (3d ed. 1940). An appellee may, without taking a cross-appeal, urge in support of the judgment any matter appearing in the record. *United States v. American Ry. Exp. Co.*, 265 U.S. 425, 435 (1924); *Langnes v. Green*, 282 U.S. 531, 538-39 (1931); *Jaffke v. Dunham*, 352 U.S. 280, 281 (1957). The rule of these cases is codified in the harmless error statute,

28 U.S.C. Sec. 2111, and in Rule 61, F.R.C.P., both cited and relied upon by the court below.

The first respect in which this rule is directly applicable is that it governed, and here justifies, the ground of the Court of Appeals' decision.

In the Court of Appeals, the asserted errors of the trial court were hotly argued, respondents insisting that the trial had been in all respects fair and that the rulings on the evidence and the charge to the jury were correct.[17] The court below never passed upon these points, choosing instead to accept the alternative argument of appellees (respondents here) that the verdict could properly have been directed. For this reason, petitioners' request at the conclusion of their brief (page 127) that the action be remanded "to the District Court for retrial" is obviously incorrect; there has been no determination, as yet, that there was any infirmity in the trial which petitioners have already had and which resulted in a jury verdict against them.

What the court below did was to determine that no error, if found, could affect the judgment because the plaintiffs had, in any event, failed to prove their case. This was a course clearly open to any court of appeals. It has been repeatedly held that where a defendant is entitled to a directed verdict, errors in the charge to the jury,

[17]In this regard, the Court is invited to peruse the jury instructions as given (R. 2014-38). The asserted errors of all kinds are immaterial on this review, and cannot be discussed in the present brief. It is enough to say that Appendix A in petitioners' brief gives a totally distorted picture of the trial, and that each of the rulings complained of can only be fairly reviewed by an unhurried examination after briefing and argument.

West v. Camden, 135 U.S. 507 (1890); *United States v. J. E. Bohannon Co.*, 232 F. 2d 756, 757-58 (6th Cir. 1956); *Wonnacott v. Denver & Rio Grande Western R. Co.*, 187 F. 2d 607, 608 (10th Cir. 1951); *Weidenfeld v. Pacific Imp. Co.*, 43 F. 2d 817, 820 (2d Cir.), *cert. denied*, 282 U.S. 890 (1930); or in the exclusion of evidence, *Mecker v. Lehigh Valley R.R.*, 236 U.S. 434 (1915); *Syres v. Oil Workers International Union*, 257 F. 2d 479, 484 (5th Cir. 1958), *cert. denied*, 358 U.S. 929 (1959); *Baird v. Aluminum Seal Company*, 250 F.2d 595, 601 (3d Cir. 1957; or both, *Monolith Portland Midwest Co. v. Western Pub. Serv. Co.*, 142 F.2d 857, 859-60 (10th Cir. 1944); *Nalbantian v. United States*, 54 F.2d 63, 64 (7th Cir. 1931), *cert. denied*, 285 U.S. 536 (1932), are an insufficient ground for reversal upon appeal. In none of these cases did the winner of the jury verdict move for judgment notwithstanding the verdict or cross-appeal. In fact, a fully successful party has no right to appeal. *Lindheimer v. Illinois Bell Tel. Co.*, 292 U.S. 151 (1934); *Public Serv. Comm. v. Brashear Freight Lines*, 306 U.S. 204 (1939).

The other respect in which the principle is here important is that this Court, in turn, is not bound by the reasoning of the court below. The respondents propose to argue hereinafter that the Court of Appeals was right for a number of factual and legal reasons in addition to those specifically mentioned in its opinion. The lower court, for example, does not reach the point of discussing petitioners' totally inadequate showing of loss of sales and profits. That will be urged hereinafter as an independent ground for affirmance. The lower court does not reach the question of the competency and sufficiency of

the evidence relating to Canada but, instead, decides that the evidence is not cognizable as a matter of law. Respondents will discuss both points. All of these matters, being encompassed by the language of the writ of certiorari, are properly before this Court.

Directly in point on this aspect of the review is one of the cases on which petitioners particularly rely. In *Story Parchment Co. v. Paterson Co.*, 282 U.S. 555 (1931), this Court held that it should consider upon the merits respondents' additional ground for sustaining the judgment below, which was that there was no evidence of an anti-trust violation. Petitioners insisted that such ground was not open for consideration because there was no cross-petition for certiorari, but this Court disagreed, saying (282 U.S. at 560) "respondents do not invoke that ground in order to overthrow the judgment below, but to sustain it; and this they may do."

II

THE PETITIONERS' ADMISSIONS AT TRIAL AND THEIR CONTEMPORANEOUS RECORDS SHOW CONCLUSIVELY THAT THEY HAD ADEQUATE SUPPLIES FOR EACH OF THEIR VENTURES AND TERMINATED SUCH VENTURES FOR OTHER REASONS.

The Apex Contract Was Terminated for Reasons Not Related to the Case.

Continental's contract with the Apex Smelting Company, which lasted from July, 1938, to July, 1942, was terminated by Apex. The reasons are spelled out in detail in Apex's letters at the time and corroborated by

the testimony of Bayer, an Apex officer called by respondents. Petitioners called no witness at all from Apex.

It was undisputed that Apex throughout had trouble with the aluminum thermic process favored by Leir. It required aluminum of high purity which was difficult to get in 1941 and 1942 (R. 873, 1217-18, 1280-81). As Leir summarized it in his letter of February 16, 1942 (Exhibit V-2-A, R. 1179, 1176):

> "A good part of our losses resulted from the use of aluminum-tin foil scrap."

Recoveries were far below those expected. Apex wrote in June, 1942 (Exhibit V-2-B, R. 1189, 1187). As Bayer put it, Apex had to learn "by our own experiments" (R. 1349-50). Apex had additional major difficulties with vanadium fumes and dust which, as they wrote Leir, had injured their employees (Exhibit V-2-G, R. 2528, 1291):

> ". . . our men are now organizing and the men that we have had in the Ferro Department refuse to go back into it as they claim that it is injurious to their health."

As a last straw, Apex, in October, 1941, suffered a serious fire in its ferro alloy department which prevented all operations for at least a month (Exhibit V-1-S, R. 1154-57).

A major and additional reason for Apex's difficulties was that it had invested only $30,000 or $40,000 in the alloy project (R. 1346) while Continental invested nothing at all (R. 1211-14). This amount Apex conceded to have been "greatly inadequate for a sound and efficient business" (Exhibit V-2-C, R. 2523, 1194) and Leir more than agreed. He wrote in February, 1942, that Apex had "never

had the necessary equipment" and concluded (Exhibit V-2-A, R. 1179, 1182, 1176):

> "It is not our fault that you treated the Ferro department as a stepchild from the very beginning."

At the trial Leir was asked if that letter constituted "a very fair statement of the situation," and he replied, "I consider it as an excellent letter" (R. 1185).

By late 1941, Apex was ready to abandon the stepchild altogether. Its hands were full with its regular business of remelting aluminum which it felt was "so vital a part of the defense program" and upon which it wished to "concentrate all of our efforts and available space" (Exhibit V-1-S, R. 1154-55). Leir explicitly recognized this at the time (Exhibit V-2-A, R. 1176):

> "It appears that the main reason for your wanting to get rid of the ferro business is your need for space for other essential war production."

The final and decisive fact was that the Apex ferro alloy department had steadily lost money. Leir made his gross selling commissions, while Apex lost about $8,000. In the end, Apex elected to terminate the contract on that specific ground (Exhibit V-2-B, R. 1190-91, 2520-22, 1187; R. 1295, 1347-48).

These were the specific reasons given for the termination in the contemporaneous correspondence of Leir and Apex relating to that termination. Throughout these letters there is not a word about any inadequacy of supplies.

Continental Had Adequate Supplies Throughout the Apex Period.

For the limited production actually undertaken by Apex, supplies were more than adequate throughout the contract

period, despite a growing and general vanadium shortage. The opinion below emphasizes the failures of Continental to request vanadium oxide from respondents, particularly during the last year of the venture (R. 2576) and also notes their failures to buy other available supplies.[18] Both aspects of the evidence are significant, and will be discussed below.

In 1939, Continental's first full year in business, EMS, a Carbide subsidiary, sold it approximately half its supplies (R. 1228-33, Exhibit U-5-L, Vol. IX, R. 588-90, R. 1229; Exhibit 119, R. 2212, 1090; Exhibit 120, R. 2213, 1094).[19] Continental requested no more oxide from the Carbide companies during the entire life of the Apex contract other than on one occasion in June, 1941; Electromet declined that offer because it needed the material (Exhibit 77, R. 776-78).[20]

VCA, in 1939, offered to sell to Continental for export, but this offer Continental itself refused, although it was exporting at the time (R. 1966-67; Exhibit 132, R. 2258, 1245). VCA declined two offers from Continental, later in

---

[18]R. 2575: "If such a shortage did exist, it is hard to understand why Apex turned down proffered arrangements with the Blanding mine or with Morrison, both of which could have furnished Apex a considerable quantity of oxide."

[19]The material was purchased through one Poliakoff, but the books indicated that Continental paid EMS directly (R. 1228). Leir gave his opinion that he could not have gotten the material directly (R. 1228) which petitioners stress in their brief (page 104), but there is no evidence that he tried to do so, or that EMS refused to sell to him at the time, or that the intercession of Poliakoff made any difference.

[20]Continental made no request in October, 1940, as stated in petitioners' table in their brief (page 59) but rather Apex wrote to say it understood from an EMS salesman that EMS was taking no new accounts (Exhibit 128, Vol. VIII, R. 189-90, R. 1240).

1939 and 1940 (Exhibit 132, R. 2260, 1245; Exhibit 63, R. 779-80), because their own supply position was becoming acute, as their contemporaneous letters show (Exhibit 56, R. 1956-57, 326; Exhibit 166, R. 1899-1900, 1970). Continental made no further requests to buy from VCA during the life of the Apex contract.

Thus at the beginning, Continental met with no refusals but rather with a sale and an offer to sell from VCA and the Carbide companies. Thereafter, those companies were using their vanadium oxide themselves, as Wolf conceded at the trial (R. 870):

> "The Court: And they did use the vanadium oxide in the manufacture of the ferro-vanadium for steel.
> The Witness: That is correct; that they used themselves."

Whether respondents could have furnished further supplies in the later stages of the Apex contract is doubtful; they were then reporting to the OPM that they had no excess supplies (Exhibit 132, R. 2265, 1245). But in any event Continental and Apex, as the court below pointed out, never asked them.

The reason was that the other supplies for the Apex contract were more than adequate.

Throughout the contract period, Apex had a regular and adequate supplier in the Shattuck Chemical Company (North Continent Mines) which Burwell testified "had far more ore than the Vanadium Corporation [V.C.A.] did" (R. 509). There is nothing in the record to show that Shattuck was unwilling to mill it and sell it, and in fact Leir so suggested to Apex in December, 1941 (Exhibit 127, R. 2222, 1240):

> "Regarding Shattuck, we suggest that you approach them and offer them a contract for larger monthly quantities than they have at present from you, in order to induce them to increase their output."

Apex, as discussed hereinafter, did not believe in large contracts and feared an oversupply, and so declined the suggestion. Even as it was, Shattuck supplied the bulk of Apex's oxide (Exhibit 118, R. 2210, 1066-68), and this supply continued uninterrupted.

And there were many other sources.

At the inception of the contract, there was, of course, no immediate need for supplies, since the Apex Thermit Department was not prepared to operate. Leir agreed in his testimony that he could have stockpiled supplies of vanadium oxide for use in connection with the Apex contract, but he thought it would have been "irrational" to do it (R. 1233). Thus, from July, 1938 to July, 1940, when the embargo on exports took effect, Leir simply exported the bulk of the vanadium he purchased (R. 1233-34).

Even for its export sales Continental had adequate supplies. In July, 1939, it canceled an order with Vitro Manufacturing Company for 6,000 pounds of oxide because of a $60 or $70 expense item and arranged to buy it elsewhere despite Vitro's objections (Exhibit U-5-K, R. 2474-84, 1219). Leir did not recall that he ever purchased from Vitro thereafter (R. 1222), although Vitro was one of the big producers (Exhibit 34, R. 199-201, 198).

Even after Apex had started production, Leir continued to sell available supplies to persons other than Apex. Between September 1940 and December 31, 1940, Con-

tinental sold 28,000 pounds of vanadium oxide to other customers, and in early 1941 made one additional sale of 1,858 pounds (Exhibit U-5-N, Vol. IX, R. 591; 1236-37). Leir testified that he "was not concerned at that time about getting regular supplies from others" (R. 1237).

Specifically, Leir did not expect Apex to reach full production until January 1941, and he predicted he would have 20,000 pounds of vanadium oxide per month from Blanding and the same from Rifle, as well as further amounts from other sources. Accordingly, he arranged to resell the first 20,000 pounds received from Blanding in August 1940 (Exhibit V-1-J, R. 2499, 1127; R. 1127-31). He testified that he was reluctant to buy oxide for the Apex operation until the installation was ready (R. 1138).

Apex had a definite policy at the time of not stockpiling supplies or committing itself in advance to take them. As Bayer put it, "We never enter into any long term contracts" (R. 1353). So far as vanadium was concerned Apex was not interested even in maintaining a one month supply of oxide on hand; whatever brief periods Apex may have had with a low inventory were directly attributable to this policy (R. 1276-77).

Apex flatly refused on four separate occasions to make agreements which would have secured for it much greater supplies of oxide on a regular and sustained basis. Thus:

(1) Blanding Mines wrote to Continental in the fall of 1940 that it could expand its capacity to 25,000 to 35,000 pounds per month but it needed $20,000 in capital together with an assurance of a long term contract (Exhibit V-2-I, R. 1698-99). Blanding's output at the time was already 12,000 to 15,000 pounds per month (Exhibit

131, R. 2233, 1242) about as much as Shattuck's (R. 1208) and Apex was only buying about half that much (Exhibit 118, R. 2209, 1066). Thus, when Leir suggested that Apex and Continental furnish $10,000 for the expansion, $7,500 of this amount to be put up by Apex (R. 1153), Apex characteristically refused. Leir accordingly had to reply to Blanding that the associates "cannot consider participating in the financing of your mill" and that they could only offer a three months output contract (Exhibit V-2-I, R. 1699-1700, 1698). Three months was not what Blanding had in mind, according to Hayward Bigler, President of Blanding at the time, and, there being no assurance of either financing or assured sales, Blanding did not expand and Apex did not acquire the expanded source of supply (R. 1700).

(2) In December, 1940, the Morrison mill, later purchased by Ackermann, was willing to make a contract with Apex for definite future quantities of vanadium oxide and Leir immediately urged Apex to bind itself to do so. Leir estimated that the mill had an available production of 15,000 to 18,000 pounds per month (Exhibit V-1-K, R. 2501, 1133). Apex, however, declined, stating that it wished to match its purchases to its projected sales (Exhibit V-1-O, R. 1140-2).

(3) In the spring of 1941 when Ackermann took over the Morrison mill (R. 1142) he wanted, in particular, an assured customer for his products. Leir again suggested that Apex contract to buy through Continental "Ackermann's output up to, let us say, 15,000 pounds a month" (Exhibit V-1-P, R. 1143, 1142) but Apex felt the matter required a "lot of thought" (Exhibit V-1-P, R. 1144,

1142). Leir does not recall that any such contract was made or guaranteed by Apex (R. 1144-45) and there is nothing in the record to the effect that it was.

(4) In September, 1941, as Pearl Harbor approached, a really large supply of vanadium oxide became available to Apex and Continental. National Vanadium Company offered them an output contract on its entire projected output of 80,000 pounds of oxide a month if Apex would agree to stockpile the material on a two-month anticipation basis (Exhibit V-1-Q, R. 2507-09, 1145). Leir urged Apex to make such a contract (R. 2509-10), but Apex refused to enter into any output contract or any other agreement which was not related to its actual sales (R. 1150). It wrote in part (Exhibit V-1-Q, R. 2512, 1145):

> "• • • we come to the conclusion that we have so frequently expressed to you, and that is to keep ourselves from becoming involved in anything outside of our own operations.
>
> • • • we feel it is entirely too dangerous to tie up for a five-year contract, in fact for any length of time. We would be glad to give them a contract based on the market for Ferro Vanadium and for a per cent of our production."

In the end the most Apex would offer was a preference to the extent of 70 per cent of its requirements. "This is all we could obtain" wrote Leir to National Vanadium (Exhibit V-1-R, R. 2514, 1151). He offered, however, to market National's "surplus" vanadium (R. 2514) and he sought to assure the company that Apex could in the end handle it all (R. 2515):

> "P.S.—You will have noted from your discussion with Apex; that they are very conservative. It is

our personal opinion that the consumption of Ferro Vanadium will go up so very much that eventually every pound of your production will go to Apex. However, *you will appreciate their attitude to their present suppliers.*" (Emphasis added).

Thus no contract was ever made.

Apex actually complained of an oversupply to Leir in its letter of October 25, 1941 (Exhibit V-1-S, R. 1155-57), saying that Shattuck had been shipping 12,000 to 18,000 pounds of oxide a month to them for some months (R. 1157); that they had sufficient oxide to cover existing orders; that they had arriving an additional supply from the Nisley and Wilson mill at Gateway (R. 1156); and that they did not wish to continue the contract (R. 1155-57). The letter concluded (R. 1157):

> "We also believe that we should immediately notify all our shippers of raw materials to discontinue making shipments to us until further notice."

Leir, who was by this time interested in the possibilities of Van-Ex, telephoned Apex immediately to prevent the discontinuance. On October 27 he wrote a letter of confirmation (Exhibit 129, R. 2223, 1240):

> "As arranged, you will *not* notify the various suppliers of raw materials to stop shipments, especially since all the raw material received can be easily disposed of under present circumstances."

That is, he thought, he could find a market for the excess supplies, whether they were needed for the Apex contract or not. Leir prevailed, with the result that by the end of 1941, Apex had 45,827 pounds of vanadium oxide on hand (R. 1306).

From the end of 1941 on, Apex was attempting to terminate the contract, and it bought as little as possible. Leir wrote Apex in January, urging it to buy more from Shattuck, to offer to buy from Monticello, and to speed up deliveries from Nisley and Wilson (Exhibit 127, R. 2222, 1240). Apex did none of these things; in fact, it was unable to accept some 12,000 pounds of oxide from Nisley and Wilson which they had ready for shipment. As Frank Nisley, a witness for the plaintiffs, testified (R. 669):

> "We had been shipping to Apex Smelting Company, and I believe they had a fire in their plant and were unable to take the product at that time * * *."

On February 14, 1942, Apex notified its suppliers, including Shattuck, to stop their shipments (R. 1283-84, Exhibit V-2-E, R. 1284). Apex then had on hand 50,000 pounds of vanadium oxide (R. 1331, 1342). Leir testified that he could not remember whether shipments were in fact immediately stopped, *but he admitted that supplies were available at the time* (R. 1175):

> "Q. Why, I am sure you didn't approve of it, but did they not at that time notify the shippers, Apex notify the shippers to stop shipping their ore?
>
> A. I couldn't tell you this.
>
> Q. You don't remember that?
>
> A. No.
>
> The Court: At that time, now Apex was able to get ore?
>
> A. Yes."

When in March Apex finally agreed to a temporary continuance of the contract it again warned Leir of the dangers of an oversupply. Leir had demanded that Apex

agree to convert, through May, all of the oxide he could secure from Blanding, Nisley and Wilson, and Shattuck (Exhibit 122, R. 2217, 1096):

> "Not knowing how those quantities may be increased, it is difficult for us to make a commitment with the limited capacity that we have."

Bayer, the only Apex witness, had no difficulty in answering the ultimate question. His testimony is clear-cut (R. 1287):

> "Q. Well, were you influenced in closing your ferro-vanadium business by the fact that you could not secure vanadium oxide?
>
> A. No, that wasn't the reason for closing."

The reasons, as he testified, were those specified in the contemporaneous correspondence (R. 1290, 1361-62), and they had nothing to do with any shortage of supplies, and nothing to do with respondents.

Continental Had Adequate Supplies for Its Van-Ex and Climax Ventures.

Continental produced Van-Ex in the latter part of 1942 and the early part of 1943. It was in February, 1943, that it made its contract with Climax Molybdenum Company for the conversion of a stated amount of vanadium oxide (Exhibit 111, R. 1016-17, 1101-04). There is no evidence that either Continental or Climax requested or suggested a further or additional contract. Thus the issue in both cases is whether, in the year 1943, petitioners had inadequate supplies for their existing purposes.

Leir's admissions alone are conclusive. He wrote in January, 1943, that he had "sufficient raw material"

(Exhibit V-2-C, R. 1194). When asked about this on the witness stand, he testified as follows (R. 1196):

> "Q. Well now, Mr. Leir, then in January of 1943 you had assurance of ample supplies of vanadic acid, is that correct?
>
> A. Yes."

The uncontradicted facts show he was right. Nisley's Government-subsidized plant produced 88,929 pounds of vanadium oxide in 1943, all of which was available to Continental, but Continental bought none of it (R. 1610, 663). It canceled one order in July, ostensibly because it was not in the form of flakes (Exhibit U-3-Z, R. 931-32), although it had previously accepted oxide in the same form from another mill (R. 1612), and although MRC was urging Continental to buy it (Exhibit U-3-Y, R. 929, 928). Then in October, when the Nisley oxide was in flakes and "just what we like best," and available in a quantity of 11,000 to 12,000 pounds a month, Continental still declined to buy (Exhibit U-5-J, R. 2471-73, 1209).

Continental needed little or none of Nisley's supply for the 20,000 pounds of vanadium converted under the Climax contract. It was EMS, the Carbide subsidiary, that supplied half the oxide needed for the Climax contract (Exhibit U-4-D, R. 942; Exhibit U-4-E, R. 943-44).[21] More was supplied by the Durango mill of Metals Reserve Company (R. 924). Thus the only time Continental applied to MRC for oxide, it got it: the *only* evidence is that all of the MRC-controlled supply was available to Continental, as to anyone else.

---

[21] This fact is omitted entirely from petitioners' table in its brief (page 59).

Thus when in 1943, Continental made its requests for monthly contracts to VCA and EMS, which they declined on grounds of short supply and prior commitments (Exhibit 40, R. 271, 269; Exhibit 41, R. 271-72, 270; Exhibit 42, R. 272-73, 271, R. 1969; Exhibit U-5-Q, R. 1371-72), Continental was already refusing regular and substantial supplies available to it from its regular supplier, Nisley, and declining to make any other requests to MRC, despite its demonstrated willingness to sell.

Continental Had Adequate Supplies for Its Imperial Contract.

Continental entered into its contract with Imperial Paper & Color Corporation in January, 1944 (Exhibit 110, R. 2175-78, 101-04). Under the arrangement Imperial reserved the decision whether or not actually to proceed, and it never did.

Imperial's decision was made known in December of 1944 (Exhibit 114, R. 1022):

> "• • • with the manpower situation as it is, we could not proceed with the Vanadium project, aside from all other considerations, • • •"

The letter continued (R. 1023):

> "As we see this situation at the present time, one of the principal hazards in entering into the manufacture of V_2O_5 is the *possibility* that you may not be able to get sufficient raw material. Certainly the two major producers at this time have protected themselves against such a *contingency* by controlling primary sources of raw material. *We would not be willing at the outset at least to make an investment of the size necessary to do this*, but nevertheless we must be sure that there are sources from which we can

always obtain vanadium-bearing materials *at a price which will enable us to manufacture and compete with those who control their own supplies.*" (Emphasis added.)

In short, there were two reasons for the failure to consummate the contract from Imperial's point of view: (1) The wartime shortage of manpower, and (2) Imperial's opinion that over the long run it was necessary to have an integrated business to compete successfully. The manpower shortage temporarily was beyond the control of the parties. Acquisition of primary sources of ore and of mills, however, was not. They were fully available, but neither party wished to put up the capital.

The "primary sources of raw material" which Imperial mentioned were there for the taking in mid-1944, and Continental failed to buy. The entire assets of North Continent Mines, which Burwell described as having "far more ore than the Vanadium Corporation did" (R. 509), were up for sale from before the inception of the Imperial contract until August, 1944. Leir had written to North Continent inquiring about its future plans in November, 1943, had gone to Chicago to see its principal officer in February, 1944, and had actually proposed a possible purchase in June, 1944 (Exhibit U-5-I, R. 1205-07), but Continental never in fact made an offer (R. 1207-08). Whether Leir ever told Imperial that North Continent could be purchased outright does not appear in the record.

It was after Leir passed up this opportunity that in August, 1944, Union Mines bought North Continent Mines for the Manhattan Project at the direction of the United States Army (Exhibit U-2-F, R. 484-86).

Leir, in fact, fully conceded at the trial that anyone who wished to commit himself could buy primary sources of raw material at any time (R. 1199):

> "Q. From your investigation of the Colorado Plateau, wouldn't you say it is true that anyone who had sufficient financial resources could have acquired sufficient vanadium ore-bearing bodies and constructed a vanadium plant so as to produce oxide, provided he was sure of a market?
>
> A. Yes, definitely."

But Continental chose not to acquire primary sources of supply, as Imperial was aware.

There was also a vast quantity of ore still in the ground near the Nisley and Wilson mill at Gateway. Burwell in 1941 had estimated the ore reserves "immediately tributary" to Gateway as containing 5,900,000 pounds of oxide (R. 596), and he testified that in later years "there has been about $20,000,000 worth of vanadium-uranium taken out of that area" (R. 291). In 1944, the bulk of this ore was necessarily still there.

Three hundred thousand pounds of it had already been mined and stockpiled by MRC and now was available for milling and sale. Nisley, who was being called into the Navy in the spring of 1944 (Exhibit 76, R. 762-63; Exhibit U-2-Y, R. 736-37) tried to interest Leir in buying the finished oxide. On April 4, 1944, he telegraphed (Exhibit U-2-V, R. 733):

> "Refer our letter March 24 concerning outlet for 300,000 pounds vanadium at rate 600 pounds per day. If you cannot handle above amount at present please wire us amount you could handle."

Leir could only reply "We will give you all possible cooperation * * *" (Exhibit U-2-W, R. 733) and "* * * we cannot give you a definite answer today * * *" (Exhibit U-2-X, R. 735-36).

In July, 1944, Nisley's two partners each wrote Leir again offering the production of the mill, estimated at 15,000 pounds per month (Exhibit U-3-B, R. 741; Exhibit U-2-Z, R. 738) but Leir only replied, "* * * we will keep it in mind should an opportunity present itself" (Exhibit U-3-A, R. 739).

Blanding also had available an output of 15,000 pounds a month which it wished to expand to 50,000 per month. In March, 1944, Continental was asked for financial assistance for the expansion but it declined (Exhibit V-2-K, R. 2533-53, 1715), offering instead only to take such output "as the same shall or may be specified for delivery from time to time" (R. 2538) and offering substantially less than the market price (R. 1722). Leir wrote at the time (Exhibit V-2-K, R. 2552, 1715):

> " * * * frankly speaking, we are not in need of any material from Utah Colorado today, unless we should want to expand our present business considerably."

For the next two months the mill stayed open anyway and produced about 12,000 pounds of oxide, but Continental refused to buy it (R. 1726). In the latter part of 1944 the mill was allowed to revert to the Defense Plant Corporation (R. 1728-29).

These supplies were minor, however, compared to the huge MRC stockpile, about 2,500,000 pounds of oxide (Exhibit U-4-T, R. 969-70) of which the Nisley mill's pro-

duction (offered to Continental and refused) formed a small part. MRC had it available for Continental's purchase "all in the form of flakes" and in any "given quantity" (Exhibit U-4-R, R. 964). There is nothing in the record to show that Continental bought any of it except for one shipment of 4,353 pounds (Exhibit U-4-R, R. 964-65).[22]

Throughout the period of the Imperial contract supplies were available from appellees as well, but Continental bought very little.

It purchased a small amount of oxide from EMS in May, 1945 (Exhibit U-4-V, R. 974-5; Exhibit U-4-W, R. 976). From the beginning of 1946 onward, Continental had requirements contracts from EMS for unlimited amounts (Exhibit U-4-X, R. 2459, 977; Exhibit U-4-Y, R. 981-82; Exhibit U-4-Z, R. 982-83; Exhibit U-5-A, R. 983; Exhibit U-5-B, R. 984; Exhibit U-5-H, R. 2469, 997), but its actual purchases were nominal.[23]

Continental made no offers to buy from VCA in 1944, or in 1945, or in 1946. In February, 1947, VCA offered to sell a carload of oxide a month to Continental at its regular contract price of $1.10, but Continental advised that "our buyers" would not buy at more than $1.00 to $1.05 (Exhibit 78, R. 781-83). There is no evidence that

---

[22]Imperial also turned down huge foreign supplies of vanadium, although Continental professed to be interested (Exhibits U-3-F through U-3-O, R. 879-903, 1204-05).

[23]Petitioners make the point in their brief (page 63) that the contracts were for "domestic" manufacturing requirements, but they failed to buy for domestic use, and in fact bought a small amount for export (Exhibit U-5-E, R. 2467; Exhibit U-5-F, R. 2468, Exhibit U-5-G, Vol. IX, R. 585, R. 991-98).

Continental ever met VCA's regular price at the time or thereafter, or made any further overtures to VCA.

Faced with the plain evidence that Continental and Imperial refused supplies from the respondents, apparently available in adequate and steady quantities, Wolf could only testify that refusals to sell were not his complaint after all (R. 979-80).

> "Q. (By Mr. Archer): Mr. Wolf, haven't you just testified that one of your complaints here is that up to 1949 the defendants had refused to sell you vanadium oxide?
>
> A. The defendants have not—no, have not refused."

In short, at the trial the claim of "elimination" collapsed in the face of petitioners' own records. Petitioners left the business when supplies of all kinds were in vast abundance. There was ore in the ground, ore already mined and oxide already milled, all glutting the market. Continental could have flooded Imperial with supplies, could have invested as much as it chose in primary or secondary sources of raw material. It chose to do none of these things.

III

THERE WAS NO EVIDENCE OF THE CLAIMED INTERFERENCE WITH PETITIONERS' BUSINESS RELATIONS.

There Was No Evidence of Any Interference With Apex.

The claim that respondents interfered with petitioners' relationships with Apex is based solely on VCA memoranda, and these give no support to the claim. The only other evidence was from the VCA witnesses and from

Bayer of Apex, and that testimony was all to the effect that there was no interference.

Petitioners introduced correspondence and memoranda of VCA in February, 1942, showing that after Apex had quit the business VCA had been approached by Apex to buy the equipment of the ferro alloy department and that VCA was considering it (Exhibit 62, Vol. VIII, R. 163-69; R. 671-76, 1331-35). VCA knew nothing about the available equipment, however, prior to Apex's final decision in January to go out of the business (R. 1283, 1285), and there is no evidence whatever to show that VCA initiated the discussions. Apex offered its entire equipment to Continental that spring, but Continental refused to buy it (Exhibit 122, R. 2215-16, 2221, 1096; Exhibit V-2-F, R. 1288-90, 1337-38). Thereafter, Apex again offered it to VCA (Exhibit 130, R. 2225-28, 1241; Exhibit V-2-H, R. 2530-32, R. 1359-60). VCA finally bought one item, the magnesite used for the Apex crucibles (R. 1286-87, 1325), and refused the rest (R. 1361). Apex apparently waited until the following September before disposing of the remaining equipment, while Leir himself made efforts to sell it to third parties (R. 1289-90). Thereafter, according to Bayer's recollection, Apex ultimately abandoned the remainder (R. 1337-38).

There was no evidence whatever, contrary to petitioners' assertion in their brief (page 47), that Apex agreed to stay out of the vanadium business in return for VCA's purchases. The memoranda on which petitioners rely are precisely to the contrary.

The first states that as of February 20, 1942, "they [Apex] have decided to go out of the vanadium business"

and "would like" to dispose of their equipment (Exhibit 62, Vol. VIII, R. 163, R. 671). The memorandum specifies (R. 163-64):

> "Mr. Christiansen further stated that they had been contemplating going out of the Vanadium business for some time and their definite decision was reached for two reasons. First, that they had a fire in this department of their plant and secondly, that the sales contract which they had with Mr. Leir, President of the Continental Corporation, had not worked out very well."

Apex's determination to quit the business was temporarily suspended by Leir's threats (Exhibit 62, Vol. VIII, R. 167-68, R. 671), but within two months Apex "had" come to an agreement with Leir, "had definitely concluded" to go out of the business, and their equipment was "now" for sale (Exhibit 62, Vol. VIII, R. 168, R. 671). Apex was then "anxious to move these items as quickly as possible" because it was "greatly in need of space" for its aluminum business (Exhibit V-2-H, R. 2530, 1359).

There is not a suggestion anywhere in the memoranda that VCA influenced the Apex decision at all or came to any understanding with Apex until after Apex had reached its final decision to quit the business.

There Was No Evidence of the Claimed Interference With Climax and With Continental's Business in Canada.

Petitioners' claims of interference with their relationships with Climax Molybdenum and with their Canadian business depend on the same evidence, which is an asserted conversation of Wolf with one M. D. Arrouet. There is no other evidence of any kind relating to Climax.

The only other evidence concerning petitioners' business in Canada is that some months prior to the Arrouet conversation, the Electro Metallurgical Company of Canada, a Canadian corporation and a Carbide subsidiary, was appointed agent of the Government of Canada to buy vanadium for all the Canadian steel mills and, at that time, chose to buy from suppliers other than Continental; thereafter, it continued to decline Continental's offers of sale except on one occasion.

Such evidence was all excluded, with the exception of certain preliminary questions, upon the ground (to be discussed hereafter) that the acts to be shown were not cognizable under the antitrust laws and upon the further ground that the Arrouet conversation was incompetent.[24] Respondents here propose to support the alternative ground, and to demonstrate that the evidence was wholly incompetent and non-probative. The issue rests upon the sufficiency of the offer of proof made at trial (R. 808-51), together with the testimony actually permitted in connection with the offer (R. 840-50).

Two established principles are pertinent as to the offered evidence so excluded:

(1) It is the offeror's burden to make error appear by means of his offer,[25] and accordingly the offer must show the competency as well as the materiality

---

[24]R. 847-48: "The objection will be sustained. The statement of a mere employee would not be binding upon a corporation unless it is shown he had authority to act."

[25]*Origet v. Hedden*, 155 U.S. 228 (1894). See *Cropper v. Titanium Pigment Co.*, 47 F.2d 1038, 1042 (8th Cir. 1931).

of the evidence[26] and also its probative value, or the exclusion will not be prejudicial;[27]

(2) Whether Arrouet's statement be regarded as an admission or as a verbal act, the issue of admissibility is a preliminary question for the court to determine, and accordingly no jury question was or is presented.[28]

It follows that general statements by petitioners' counsel that respondents in New York "directed" or "controlled" the events in Canada are to be disregarded; general statements that "Carbide" threatened petitioners are to be disregarded; general statements that Arrouet was "very important," or that he was authorized or designated to speak, are to be disregarded. It is the specific proof offered that counts, and if petitioners had none, then the offer of proof was properly rejected and cannot be error.

Arrouet was supposed to have said that Continental should stay out of the vanadium business and that Climax should too, or else the Carbide companies might take reprisals (Exhibit 109 for ident., Vol. IX, R. 467-68, R. 834, R. 828-29). Counsel for petitioners sought to prove

Hathaway*, 104 N.E. 379 (Mass. 1914); 9 Wigmore, *Evidence*, Sec. 2550 (3d Ed. 1940).

the conversation solely through the testimony of Martin Wolf and through correspondence and memoranda not written by Arrouet (R. 808, R. 826-29, Exhibits 80-109 for ident., Vol. IX, R. 4384-6s, R. 834), and accordingly the key issue of admissibility was as to Arrouet's authority from respondents to say or do what he was alleged to have done. Counsel for respondents specifically objected to the testimony on the ground that no authority was shown (R. 846).

Petitioners' counsel sought to meet the objection of lack of authority in two ways: (1) by the testimony of Martin Wolf as to his understanding of Arrouet's position; (2) by letters and testimony assertedly showing that Wolf was referred to Arrouet by persons authorized to do so. These theories will be considered in order.

It was, and is, conceded that Arrouet at the time was an employee of Electro Metallurgical Company, an American corporation and a wholly owned subsidiary of Union Carbide, which was named but not served as a defendant below. It was also stipulated that Arrouet was not an officer of Electro Metallurgical Company (R. 827). There was no contention that Arrouet was employed by any respondent company, or was connected with any respondent at all, other than as an employee of a subsidiary or affiliate.

As to the scope of Arrouet's responsibility, Wolf's hearsay testimony was (R. 847):

> "I didn't know what his exact position was. I knew he had no title, but he had a very big office."

Wolf further testified by hearsay that Arrouet was "involved in certain purchasing operations, as far as I

learned" and that it was almost "raw material procurement in a vaster sent (sic.)" (R. 849-50). This was all of the testimony.

In this testimony then, even if the hearsay is credited, there is no showing that Arrouet was a managing agent, much less an executive officer, or that he had any business making statements about the policy of his company or any parent or affiliated company. There was no indication that he was concerned in his work with the export of oxide to Canada, or with the vanadium business at all, or with the molybdenum business, or with the relationship of any Carbide company to any other company. The offer of proof was merely that he was an employee engaged in purchasing for Electro Metallurgical Company in New York.

The employee status so shown carries with it no power to make statements concerning company policy or to make admissions on behalf of the employer. *Winchester & Partridge Mfg. Co. v. Creary*, 116 U.S. 161 (1885); *Washington Gas Light Co. v. Lansden*, 172 U.S. 534 (1899); Restatement (2d Ed.) *Agency*, Secs. 33, 34, 286, 288 (1958). So it has been consistently held that hearsay evidence of threats made by an agent with limited authority is inadmissible. *McDonald v. Coop. Restaurant, Inc.*, 64 F.2d 383 (App. D.C. 1933); *Nichols v. Republic Iron & Steel Co.*, 89 F.2d 927 (5th Cir. 1937); *United States v. Konovsky*, 202 F.2d 721 (7th Cir. 1953). Directly in point is *Flintkote Co. v. Lysfjord*, 246 F.2d 368 (9th Cir. 1957), *cert. denied*, 355 U.S. 835 (1957) in its discussion of inadmissible threats by unauthorized persons in what is described in the opinion as "Conversation No. 1." The converse is

Johnson v. J. H. Vest Lumber Co., 117 F.2d 53 (8th Cir. 1941) where similar statements made by "managing agents" were held admissible.

Thus Arrouet had no authority, by virtue of his mere employment, to make policy statements on behalf of his employer, Electromet, and none at all on behalf of the respondents Carbide, USV and VCA.

As to the supposed reference of Wolf to Arrouet, Wolf again was permitted to testify directly (R. 847-50). He said that he had been "directed" to see Electromet in New York (R. 847) but did not say who had directed him. He said "we were told" to send a letter to Mr. Walker of Electromet, but again he did not say who did the telling. Petitioners' Exhibit 80, however, specifies that it was Mr. Bateman who "suggested" that Continental see Electromet (Vol. IX, R. 438, R. 834). Bateman was no employee or agent of any respondent or subsidiary, but in fact was the Metals Controller of Canada. Thus there was no reference by Electromet of Canada to Electromet in New York.

Wolf accepted the unauthorized suggestion and wrote to Walker of Electromet. He testified that after that he got a telephone reply from Arrouet and went to see him (R. 848-50). From this, petitioners argue that Arrouet was in effect designated to speak on behalf of Walker and assume that Walker, as a Vice President of Electromet, had authority to designate him.

But there is no showing at all that Walker had anything to do with exports to Canada, or purported to designate Arrouet to say anything. Presumably, he asked Ar-

rouet to find out exactly what Continental wanted, and why it was directing its complaint to the American company at all, and then to report back to him. If there is any more positive inference, it is that Walker told Arrouet specifically to refer Continental back to the Canadian company, *for this is just what Arrouet did*, according to petitioners' next letter, addressed to Arrouet (Exhibit 81 for ident., Vol. IX, R. 439, R. 818):

> "You requested us to contact the Electrometallurgical Company in Welland[29] and submit our offer to them."

Continental so understood it, for thereafter it corresponded exclusively with Electromet of Canada and the office of the Metals Controller (Exhibits 82-108, Vol. IX, R. 411-466). In other words, the *only* indication from the correspondence is that Arrouet had no authority at all, and neither did Electromet in New York, and both Arrouet and Wolf were fully aware of these facts.[30]

It was not until five months later that Wolf saw Arrouet again, according to his memorandum, and *at that time* assertedly received the threats complained of (Exhibit 108 for ident., Vol. IX, R. 467-68, R. 826). Continental had not in the meantime been told to see Arrouet again by anyone, so far as the proof shows. Thus at the time of the supposed threats there was no reference or designation

---

[29]Welland, Ontario, the address of the Electro Metallurgical Company of Canada.

[30]Even if Wolf were not fully aware of Arrouet's lack of authority, the result would be the same. Actual, not apparent, authority is required before an agent's statements are imputable to the principal. Restatement (Second), *Agency*, Sec. 286, comment b.

by anyone. Wolf simply chose to see someone whom he had previously met in Electromet, who had already told him that he should address any complaints to the Canadian company.

Moreover, even assuming that there was any reference, there was no evidence at all as to what it was. An authorization by reference or designation is of course limited to the subject matter that the agent is expected to discuss. *Allen v. Killinger*, 8 Wall. (U.S.) 480 (1869); *Insurance Co. v. Mahone*, 21 Wall. (U.S.) 152 (1874); *Garey v. Kelvinator Corp.*, 271 N.W. 723 (Mich. 1937); 4 Wigmore, *Evidence*, Sec. 1070 (3d Ed. 1940). The fact that the agent later exceeds whatever authority he had does not, of course, prove that he had it in the first place; even if he declares he has it, his authority cannot be so proved by hearsay. *Durant Motor Co. v. Georgia-Florida Motor Co.*, 18 F.2d 95 (5th Cir. 1927); *Hotel Atlantis, Inc. v. Peerless Casualty Co.*, 285 F.2d 257 (2nd Cir. 1961); 1 Mechem, *Agency*, Sec. 285 (2d Ed. 1914). Here, Arrouet did not even purport to be speaking with anyone's authority, so far as the offer of proof shows. Thus there was a total failure to show that Wolf was referred to Arrouet for a statement of policy, or a threat, or anything of the kind he is claimed to have said.

To sum up: Arrouet was in fact a mere employee without actual or apparent authority to say anything about vanadium exports. If he said what is claimed, he did so without the knowledge or approval of his employer or of anyone else, including the respondents. This is the total offer of proof. It follows that under no theory was the Arrouet conversation admissible.

For much the same reasons, had the conversation been admitted, it would have proved nothing. If a responsible officer of a company utters threats, that may well constitute circumstantial evidence tending to prove that some action was taken or some result followed. But that an employee without power to act or make policy utters such statements is, if shown, entirely meaningless. His opinion, as such, has no independent significance, for he is not in a position to translate that opinion into action.

Here, of course, there is not the slightest evidence that anyone in authority, or anyone else at all, even knew of Arrouet's supposed threats, much less approved them or acted upon them. No one is shown to have communicated with or troubled Climax in any way. No one from Electromet or Carbide in New York is shown to have communicated with Electromet of Canada with regard to Continental or anything else, or otherwise to have influenced the decision of that company. Of course, it cannot be presumed, assumed, or inferred that it did so merely because of the bare corporate relationship.[31] Nor does it aid the inference that, five months *after* the Canadian company acted, a purchasing agent in New York was heard to utter unauthorized opinions or threats.

The result is that there was no evidence, competent or incompetent, that anyone interfered with Climax or Continental's business in Canada.

---

[31]No evidence was offered that Electromet of Canada had officers or directors in common with those of any other Carbide company, nor is there any other indication of parental control or direction, or a principal and agent relationship. The single fact of ownership of one corporation of another has never been regarded as sufficient to show any of these things. 1 Fletcher, *Corporations*, Sec. 43, pages 157, 158, Note 70, and cases cited.

The offer of proof was totally lacking in still another respect. If there had been a wrongful interference which resulted in the loss of a customer, it still would be incumbent on petitioners to show that the loss injured them. But petitioners' whole theory was that they were short of *supplies*, and that they could sell all they could produce. Wolf so testified (R. 845), and these are the claims of the complaint (paragraphs 34, 35, R. 18-19). All of their attempted proof of damages was based on the hypothesis that they could not get enough supplies and could sell all that they produced (R. 852-63, 1107-13). If this was so, if customers were clamoring for vanadium which Continental could not produce for lack of supplies, then the loss of Atlas Steels would mean nothing. Continental would readily sell to someone else. Petitioners in fact carefully avoided showing that they could *not* replace the lost customer (if this were indeed the fact), for to make such proof would have destroyed the remainder of their case.

The result is that the claim of interference is irrelevant here, even if the fact of interference were shown by the offer. Petitioners chose not to couple with their offer as to interference any offer as to damage resulting from the interference, and instead relied throughout the trial upon the opposite theory of damages. The claim of interference is therefore not related to their showing of the fact or amount of damage, and is immaterial here.

For all of these reasons, the offered evidence has no bearing upon this review.

There Was No Evidence of Any Interference With Any Plan to Build a Mill.

Petitioners make a claim for the first time on this review that there was an interference with their forming an association for the purpose of "building a mill" by means of respondents' acquisition of the Durango mill (pages 61-62).

Respondents are at a loss to understand the statement of the claim or what the claim is supposed to be. The cited evidence concerning the claim (Exhibit V-2-K, R. 2533-44, 1715, 1775-77) shows that Continental and Blanding were then discussing the enlargement and reopening of the existing Blanding mill, together with a requirement or output contract, but that Leir was not interested in committing Continental financially or otherwise, and the plan collapsed. Incidental to this negotiation, they discussed formation of an association of producers, the apparent purpose of which was to fix prices (R. 2549-50). The only reference to "building" a mill, made by Bigler of Blanding on cross-examination, clearly referred to the proposed enlargement of the existing Blanding mill (R. 1775-76).

How the respondents' acquisition of the Durango mill could possibly have affected any of these plans at Blanding is never indicated in petitioners' brief and certainly does not explain itself.

IV

PETITIONERS AVOIDED AND OMITTED ALL PERTINENT EVIDENCE RELATING TO THE ASSERTED LOSS OF SALES AND PROFITS.

A plaintiff in an antitrust action proves his damage by means of two essentially different demonstrations: (a) he proves the *source of the injury*, by showing the adverse relationship of defendants' acts to the characteristics and needs of his own business; (b) he proves a *financial loss*, ordinarily by demonstrating a loss of sales and consequent loss of earnings. The latter aspect of the proof often goes only to the amount of damage, the fact of damage being already clear; but in a case where the injurious impact is itself doubtful, the inquiry into the relevant sales and earnings figures may be decisive.

In the present case not only did petitioners fail to show that any of the respondents' acts affected their business needs, as discussed in the preceding sections of this brief; they also failed to offer relevant evidence, although it was fully available to them, to prove they in fact lost sales and profits.[32] The failure was so total that it is pertinent here: that is, it confirms the fact no damage verdict at all could have been rendered.

There Was No Evidence of Lost Sales.

Petitioners' first and major task was to prove that they had actually lost sales as a result of respondents' acts. Some type of proof was required that their sales would

[32] No attempt was made to prove any other type of damage (loss of capital values, out-of-pocket expense, etc.).

actually have been greater than they were, but for the claimed supply restrictions and the other asserted interferences.

In the present action, the nature of the proof was simple if the fact existed. This was not like a moving picture case where the plaintiff exhibitor has thousands of nameless customers and must show a loss of sales entirely by revenue comparisons. Continental had a total of only about a dozen domestic customers (Exhibit 79, R. 2169-74, 797), and its potential customers were only those relatively few concerns that were engaged in making vanadium-alloy steels.

If any of those customers had been lost because Continental did not have the necessary supplies, the fact would have been spread upon Continental's own contemporaneous records and files, which were fully available. The facts would also have appeared in the customers' files, if those files existed, and, if not, they would be remembered by the customers' employees who were interested in purchasing. In the case of Atlas Steels, the one customer Continental did lose, at least temporarily (for reasons elsewhere described), petitioners had no difficulty at all in proving the fact by their own records.

Yet with that one exception, Continental offered no evidence of any lost sales. No contemporaneous correspondence or records were introduced to prove such losses; no witness from any customer or potential customer so testified on trial or by deposition; even Leir and Wolf never so testified. *There was a total failure to prove lost sales, in a case in which such evidence was fully available.*

What petitioners actually did offer was the following: (1) they offered in evidence their record of net worth and sales in *all products* and their sales in *fluorspar* (Exhibits 123, 124, 125 for ident., Vol. IX, R. 536-40, R. 1097, 1103, 1106) and then asked that the jury be permitted to infer that their sales of *vanadium* should have followed the same trend (Exhibit 126 for ident., Vol. IX, R. 541, R. 1106-07); (2) they offered in evidence computations of sales based upon assumed shares of the market—their market share in 1941 (Exhibit 139 for ident., Vol. IX, R. 543, R. 1261-62), their possible share if they produced and sold at the maximum capacity of Apex (Exhibit 140 for ident., Vol. IX, R. 544, R. 1262-63), and finally their "share" of sales based on arbitrary shares of the market from 1% to 15% (Exhibit 141 for ident., Vol. IX, R. 545-46, R. 1263-64)—and asked that the jury be permitted to guess at some one of the offered figures.

There was no evidence offered that vanadium was materially similar to any of the other materials traded by Continental, or that petitioners' vanadium business would have paralleled its other businesses in any respect. The undisputed evidence showed the opposite. Vanadium was the only product Continental attempted to process (with associates); the others it simply traded (R. 1198-99). Vanadium was also a war industry—in terms of supply, demand, costs, and prices—and there was no evidence offered that the other materials sold by Continental were similarly affected, at the same times, to the same extent, or at all. Vanadium and fluorspar, in particular, as Wolf admitted, "have nothing in common as materials" (R. 853), and in fact were used for different purposes (R. 785,

853). There was no evidence that the trend in sales, prices and production costs of the two materials was comparable at all.

Nor was there any evidence offered that Continental should in the normal course have had or maintained any particular share of the vanadium market, or any share at all. No expert or anyone else so testified. There was no evidence from the people in the steel mills, who, in this case, constituted the entire potential demand. The only evidence was that Continental's share was temporary: Apex was unwilling to invest time or money in the business on a permanent basis; so were Imperial and Climax; and Van-Ex was nothing but black market oxide. Thus none of the offered evidence reasonably supported the assumption that Continental ever developed any permanent customers, much less a specified share of the permanent market. Without this assumption the market-share approach had no rational relation to the case.

The result was that there was no evidence of lost sales.

There Was No Evidence of Lost Profits.

Had petitioners proved lost sales, their next task would have been to show that they would have made a profit on such sales. Without profits there would have been no damage. *Yet petitioners never showed their actual profit experience in any of their vanadium ventures at any time.*

The evidence offered shows the net profit for the *company as a whole* (Exhibit 121 for ident., Vol. IX, R. 469-535, R. 1095-96, 1087-88) and the *gross* profits for vanadium (Exhibit 119, R. 2213, 1090) but that is all. It is entirely unknown what net profits, *if any*, Continental

made in exporting oxide, and in making Van-Ex, and in making and selling ferrovanadium. It was admitted that Apex *lost* money (Exhibit V-2-B, R. 2520-22, 1192), but the jury was never told whether Continental made any net profit on its commissions and, if so, how much.

Thus Leir admitted on cross-examination (R. 1225):

> "Q. Yes. In other words, you have a gross profit figure there from which matters such as overhead, and whatever goes into overhead, have not been deducted?
>
> A. I would say so."

And again (R. 1227):

> "Q. (By Mr. Archer): Now, the 'Commission earned' is, again, a gross commission, is it not?
>
> A. A gross commission, out of which we would pay all our expenses, for traveling and advertising, and so on."

The gross profit figure is thus meaningless.

Once again, the relevant evidence was fully available. Nothing was to prevent petitioners from computing a reasonable allocation of their expenses to apply to their vanadium business and offering the same. Only they could have adduced the figures required for the computation. They never did so. Whether such an allocation would have shown that they were in fact operating at a loss in vanadium no one can tell.

Instead of showing what their net profits actually were and what, by projection of lost sales, the profit might have been, petitioners offered a table showing *respondents'* net profits in both *vanadium and uranium* (Exhibit 20 for

ident., Vol. VIII, R. 217-18, R. 130). No basis for any comparison was shown. The parties were scarcely in the same business: (a) respondents had their own ore, their own mills, their own conversion plants, their own research and sales promotion staffs, while Continental had none of these and was largely a commission broker; (b) respondents were heavily involved in uranium as an integral part of their busines while petitioners were not but, instead, were largely concerned with fluorspar; (c) respondents had a large part in contemporaneous Government programs, with which Continental had nothing to do. Thus the profit figures could not have been compared, even if properly presented, for the businesses were non-comparable. However, the exhibits themselves added to the total disparity. Petitioners' figures, of course, were for *gross* profits in *vanadium;* respondents' were for *net* profits in *vanadium and uranium.* Thus the profit figures were in themselves non-comparable, even if the businesses of the parties had been similar.

The result was that there was no evidence of any kind that Continental had ever made money in the vanadium business or would have done so under any projected set of circumstances.

V

AS A MATTER OF LAW, THE RECORD FAILS TO SHOW ANY INJURY OR DAMAGE.

The foregoing is the record relating to the damage claim. On such facts, there is no legal issue fairly presented unless it can be questioned whether proof of injury is required in a private antitrust case.

The parties agree that the principles expressed by this Court in *Bigelow v. RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), and *Story Parchment Co. v. Paterson Co.*, 282 U.S. 555 (1931), are controlling, but disagree not only as to their application but also as to what those principles are.

Petitioners, having in mind various statements of Burwell that he and his company intended to injure them, assert at the outset of their legal argument that "* * * intentional acts aimed at the destruction of competitors are actionable by those who are the objects of the restraints" (page 74). The same thought is expressed in various ways thereafter (pages 74-90), the argument appearing to be that, if respondents wanted to put Continental out of business, and performed various acts intended for the purpose, and, if later Continental actually did go out of business, then the fact of damage is shown.

If this argument were accepted, it would destroy the statutory requirement that a damage claimant show actual injury to his property or business. Logically it is indefensible. An act intended to injure may or may not cause injury, and, if it does not, it is totally immaterial that the result intended actually comes to pass.[33] The crux of any damage case is that the wrongful act *in fact* caused the result of which plaintiff complains.

Story Parchment and *Bigelow* do not purport to abrogate the statutory requirement that damage be proved as a fact. In both of the opinions the fact of damage was

[33]The argument has been specifically isolated and rejected before. *Talon, Inc. v. Union Slide Fastener, Inc.*, 266 F.2d 731, 737-38 (9th Cir. 1959).

regarded as clear, and the issues turned on the sufficiency of proof as to the amount. So in *Story Parchment*, where predatory price cutting by all of plaintiff's competitors forced it to lower its own price, this Court held the evidence sufficient to show that petitioner was "injured in its business and property as a result of this unlawful combination" (282 U.S. at 560) and added (page 562):

> "It is true that there was uncertainty as to the extent of the damage, but there was none as to the fact of damage; and there is a clear distinction between the measure of proof necessary to establish the fact that petitioner had sustained some damage, and the measure of proof necessary to enable the jury to fix the amount. The rule which precludes the recovery of uncertain damages applies to such as are not the certain result of the wrong, not to those damages which are definitely attributable to the wrong and only uncertain in respect of their amount."

The same principles were approved in *Bigelow*, the Court reviewing *Story Parchment* and *Eastman Kodak Co. v. Southern Photo Co.*, 273 U.S. 359 (1927), in the following language (327 U.S. at page 264):

> "In each case we held that the evidence sustained verdicts for the plaintiffs, and that in the absence of more precise proof, the jury could conclude as a matter of just and reasonable inference from the proof of defendants' wrongful acts and their tendency to injure plaintiffs' business, and from the evidence of the decline in prices, profits and values, not shown to be attributable to other causes, that defendants' wrongful acts had caused damage to the plaintiffs."

The evidence of discriminations in release dates forced upon plaintiff by his major suppliers, together with a

before-and-after comparison of his receipts, was, the Court found (Justice Frankfurter dissenting), "ample to support a just and reasonable inference that petitioners were damaged by respondents' action" (page 266).

Thus the reasoning of the *Story Parchment* and *Bigelow* cases is that the fact of damage, or causation, must be shown with some reasonable certainty, the exact degree of which is not specified.[34] It must, however, be proved as a fact. It is not to be assumed from the existence of the wrongful acts themselves, nor is it to be presumed, as petitioners further suggest, upon some policy of aiding the enforcement of the antitrust laws. The governing act might have been so framed, but it was not; it specifically requires proof of injury, and the cases proceed accordingly.

There Is No Evidence of Wrongful Acts Having a Tendency to Injure Petitioners.

The review of the evidence contained in the previous sections of this brief may be summarized in a few sentences.

Leir admitted on the stand the adequacy of his supplies in 1940 and early 1941, when he was reselling oxide not needed for the Apex contract. He admitted the adequacy of his supplies in early 1942, when the Apex contract was terminating. He admitted the adequacy of his supplies in early 1943 when the Van Ex production neared its end and he was arranging the Climax contract. He stated that

[34]Two frequently cited lower court opinions to this effect are *Momand v. Universal Film Exchange*, 172 F.2d 37 (1st Cir. 1948), *cert. denied*, 336 U.S. 967 (1949); *Flintkote Co. v. Lysfjord*, 246 F.2d 368 (9th Cir. 1957), *cert. denied*, 355 U.S. 835 (1957).

he wanted no supplies from the Colorado Plateau in a letter early in 1944, shortly after he signed his contract with Imperial. Thus there were admissions of adequate supplies at each crucial period. Petitioners' contemporaneous records further show that Continental and its associates refused or declined to buy offered and available supplies in 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948 and 1949—that is, in every single year for which damages are claimed.

There is a total failure of proof of interference by any respondent company with the Continental-Apex relationship, with the Continental-Climax relationship, with the Continental-Atlas Steels relationship, or with any plan of anyone's to build a mill. Petitioners failed to call any witness to testify at the trial, or by deposition, from Apex, Climax, Imperial or Atlas Steels, and failed to show that they were planning to build a mill. The few documents that they adduced gave rise to no inference of interference.

This record is dispositive of the claim.

Petitioners argue at length that respondents controlled much of the supply of oxide and wrongfully refused to sell, and that they wrongfully interfered with petitioners' other sources of supply. Respondents deny both assertions, but need not dispute them here. The decisive consideration is that, whatever respondents may have done, *petitioners in fact had more than adequate supplies.* Any attempted restrictions of their supplies are irrelevant because on the facts of this case they could not have caused injury.

The same reasoning is implicit in *Standard Oil Co. of California v. Moore*, 251 F.2d 188 (9th Cir. 1957), *cert. denied*, 356 U.S. 975 (1958), and respondents submit that it is sound. The court stated the issue as "whether Moore was unable to obtain a supply of petroleum products which would permit him to remain in business" (251 F.2d at 198). It found the evidence sufficient for a jury verdict, but, in doing so, it examined into each of Moore's sources of supply to reach the conclusion that no adequate source remained.

Petitioners argue (pages 96, 104) that there is a phrase in Apex's letter of November, 1941 (Exhibit V-I-Q, R. 2512A) to the effect that Apex did not have enough oxide to run its production at capacity. The statement was factually true, for Apex had never run anywhere close to capacity, but this was Apex's own choice. As the cited letter itself shows, Apex was at this very time turning down the National Vanadium supply because it did not wish to commit itself ("We feel it is entirely too dangerous to tie up for a five year contract, in fact for any length of time") and because business might decline (a more flexible contract "would take care of us so that if business dropped off entirely, we would have no obligations") (Exhibit V-I-Q, R. 2512). Apex had made the same choice throughout the history of the contract, and this was no exception.

Leir fully recognized all of this at the time, in his reply to the letter cited. He noted that the National Vanadium mill was expected to produce 80,000 pounds per month, "many times the output of Shattuck and Blanding," and that if Apex had any concern about raw materials "one

would think that you would be anxious to tie up this new vanadic acid production" (Exhibit V-Q, R. 2513). He sought to assure them that their supplies would not then be excessive:

> "It would then be a question only of how to manage the output from Shattuck, Blanding, and Gateway. We think you can rely on us to make larger sales of ferrovanadium, in the same proportion in which we obtain raw material."

But Apex had no desire to test the proposition.

The same observations apply to the Apex letters of December, 1941, to the OPM and the Defense Plant Corporation (Exhibit 144, 146, R. 2266-75) as discussed in petitioners' brief (pages 103-04). The letters never state that Apex had inadequate supplies for existing orders, or for any existing need, but that for Apex to operate at a capacity of 50,000 to 60,000 pounds per month it would need more supplies (R. 2275). Apex, of course, had never operated at anything like this capacity, but produced only a little over 100,000 pounds during the entire contract period, or an average of about 5,000 pounds per month during the two years of actual operation (Exhibit 119, R. 2242, 1090, 1351). Thus these letters, which Leir insisted on, and himself drafted,[*] were concerned with "future operations" at a "distant date", as Bayer put it in his testimony (R. 1358). Apex itself had no interest in

[*] Petitioners concede that the letters were written "at the urging and insistence of Mr. Leir." Pet. Brief, page 103, and in fact they were drafted by him and the drafts sent to Apex (Exhibit 144, 146, R. 2266-75, 1354-55).

the allocations, for it had decided to leave the business, but Leir still hoped that Apex would agree to a larger operation (Exhibit V-2-A, R. 1176-85), and also was by then actively sounding out customers for his Van Ex (R. 1159-60). Thus Leir, using Apex as a front, sought to secure allocations for whatever future business he might develop. Under no interpretation was there a present or existing need.

Petitioners can point to nothing else having any bearing on the adequacy of supplies for the Apex contract, and they fail entirely to explain the refusals to buy, the 50,000-pound supply existing at the end of the contract, Leir's admissions of the adequacy of his supplies, and the correspondence which specifies that other causes were exclusively responsible for the termination.

Petitioners do not even contend that supplies were insufficient for the Climax contract (Pet. Brief, pages 105-08). They say with regard to the Van Ex venture that the Nisley production "could not" have been available because of Nisley's toll agreement with the MRC (Pet. Brief, pages 109-11); they fail, however, even to discuss Continental's own correspondence showing a continuous refusal to buy the Nisley supply, or to mention their successful purchase from the MRC mill at Durango, or to explain their failure to make any other requests of the MRC. As to the Imperial contract, petitioners' total argument is that respondents refused on one occasion to sell to them before the contract even began (Pet. Brief, pages 108-09). They never discuss or mention the vast supplies that were available, from respondents and others, from the beginning to the end of the contract period.

There is, in short, no conflict on the pivotal fact that petitioners had adequate supplies for each of their ventures and so could not have been injured by any supply restriction, if any were proved. No other restraint was the subject of evidence.

There Was No Evidence of Loss of Sales or Loss of Profits.

The second aspect of the proof of damages is no less important here, for when it came the petitioners' turn to show from their records that they actually lost sales and profits, they failed to produce the only probative evidence and insisted upon guesswork.

Two established principles control as to this facet of the proof. The first is that enunciated in *Bigelow*, 327 U.S. at 264:

> "In such a case, even where the defendant by his own wrong has prevented a more precise computation, the jury may not render a verdict based on speculation or guesswork. But the jury may make a just and reasonable estimate of the damage based on relevant data, and render its verdict accordingly."

Here, the jury was invited to speculate with no "relevant data" at all.

The second principle is a corollary of *Bigelow* and relates to the fact that here the best available evidence of loss of sales and profits was carefully avoided. As Judge Kirkpatrick stated it in *William Goldman Theatres v. Loew's, Inc.*, 69 F. Supp. 103, 106 (E.D. Pa. 1946), *aff'd.* 164 F.2d 1021 (3rd Cir. 1948), *cert. denied*, 334 U.S. 811 (1948), referring to the *Bigelow* principles:

> "Of course he [the plaintiff] must always produce all the evidence he can * * *."

The same requirement is stated in *Riss & Co. v. Association of American R.R.'s*, 190 F. Supp. 10, 18 (D.C. D.C. 1960), *rev'd on other grounds*, 1962 T.C., ¶ 70,204 (D.C. Cir. 1962); and see *William H. Rankin v. Associated Bill Posters of the United States*, 42 F.2d 152, 155 (2nd Cir. 1930), *cert. denied*, 282 U.S. 864 (1930); *Kobe, Inc. v. Dempsey Pump Co.*, 198 F.2d 416, 427 (10th Cir. 1952), *cert. denied*, 344 U.S. 837 (1952); *Herman Schwabe Inc. v. United Shoe Machinery Corp.*, 297 F.2d 906, 910 (2nd Cir. 1962). The rule is directly related to the presumption that available evidence not produced would be adverse. *Clifton v. United States*, 4 How. (U.S.) 89 (1845); *Galloway v. United States*, 319 U.S. 372, 385-87 (1943); 2 Wigmore, *Evidence*, Sec. 285 (3d Ed. 1940). It is also the converse of the *Bigelow* theory that "defendant by his own wrong has prevented a more precise computation" (327 U.S. at 264). Where the evidence is in fact available, but the plaintiff avoids it, the reason for the *Bigelow* liberality disappears.

The failure of petitioners in this case to show lost sales should in itself be decisive. Instead of showing that there were in fact unfilled orders or requests, and from whom and how much, the evidence of which was necessarily available, and available only to petitioners, petitioners relied exclusively on estimates of market shares unrelated to any evidence whatever. The evidence as offered was wholly nonprobative, and no jury verdict based on it could have stood. *Emich Motors Corp. v. General Motors Corp.*, 181 F.2d 70, 83-84 (7th Cir. 1950), *rev'd on other grounds*, 340 U.S. 558 (1951); *Wolfe v. National Lead Co.*, 225 F.2d 427 (9th Cir. 1955), *cert. denied*, 350 U.S. 915 (1955); *Flintkote Co. v. Lysfjord*, 246 F.2d 368, 391-93

(9th Cir. 1957), *cert. denied*, 355 U.S. 835 (1957); *Wisconsin Liquor Co. v. Park & Tilford Distillers Corp.*, 267 F.2d 928 (7th Cir. 1959); *Herman Schwabe, Inc. v. United Shoe Machinery Corp.*, 297 F.2d 906 (2nd Cir. 1962); *Clapper v. Original Tractor Cab Co.*, 165 F. Supp. 565, 580-82 (S.D. Ind. 1958), *aff'd in part*, 270 F.2d 616 (7th Cir. 1959), *cert. denied*, 361 U.S. 967 (1960); *Delaware Valley Marine Sup. Co. v. American Tobacco Co.*, 184 F. Supp. 440, 446-47 (E.D. Pa. 1960), *aff'd*, 1961 T.C., ¶ 70,170 (3rd Cir. 1961); *Siegfried v. Kansas City Star Co.*, 193 F. Supp. 427, 436 (W.D. Mo. 1961), *aff'd*, 298 F.2d 1 (8th Cir. 1962).

Equally inexplicable and equally destructive of any rational proof of damage was petitioners' failure to show their actual net profits in vanadium. Their "gross profits" were meaningless in the absence of a basis for estimating expenses and thus arriving at net profits.[36] *Wolfe v. National Lead Co., supra*, at page 431; *Delaware Valley Marine Sup. Co. v. American Tobacco Co., supra*, at page 448; *Siegfried v. Kansas City Star Co., supra*, at page 436. The profit made on *all* petitioners' businesses, especially in fluorspar, was obviously no indication of what they might make in vanadium. *Ronson Patents Corp. v. Sparklets Devices*, 112 F. Supp. 676, 692 (E.D. Mo. 1953), *aff'd*, 202 F.2d 87 (8th Cir. 1953). The amount of profit made by respondents was even more irrelevant, because their integrated vanadium-uranium businesses were different in all material respects from petitioners' trading ac-

[36] In Kohler, *A Dictionary for Accountants*, "gross profits" is defined as "net sales, less cost of goods sold and inventory losses, but before considering selling and general expenses, incidental expenses, and income deductions."

tivities. *Fargo Glass & Paint Co. v. Globe American Corp.*, 201 F.2d 534, 540-41 (7th Cir. 1953), *cert. denied*, 345 U.S. 942 (1953); *Flintkote Co. v. Lysfjord*, *supra*, at pages 393-94; *Herman Schwabe, Inc. v. United Shoe Machinery Corp.*, *supra*, at page 911. Thus there was no evidence showing net profits. In the absence of it, in an industry with variable expenses and profit rates, there was no permissible assumption that profits were automatic or guaranteed. *A fortiori* was this the case where petitioners' principal associate had actually lost money. Certainly, no jury could first presume profit, where none was shown, and then pick a rate of profit out of thin air. *Baush Mach. Tool Co. v. Aluminum Co. of America*, 79 F.2d 217, 227 (2nd Cir. 1935); *Wolfe v. National Lead Co.*, *supra*, at pages 431-32; *Flintkote Co. v. Lysfjord*, *supra*, at pages 391-94. See *Talon, Inc. v. Union Slide Fastener, Inc.*, 266 F.2d 731, 737-38 (9th Cir. 1959).

Thus in a case where the precise proof was at hand petitioners asked for a verdict "based upon speculation or guesswork" and now purport to rely on *Bigelow* for justification. The reliance is misplaced. Neither *Bigelow* nor any other case has ever sanctioned a deliberate avoidance of the facts from one having the burden of proof. The aid of *Bigelow* is intended for those who prove all they can and in so doing are able to demonstrate at least the substance of a meritorious claim.

Upon All Aspects of the Claim Petitioners Failed to Tender an Issue.

The present action is similar in one aspect to *Galloway v. United States*, 319 U.S. 372 (1943). There, as here, the best and most probative evidence was withheld, with

the result that the fact to be proved might be presumed against the claimant.

Unlike *Galloway*, however, there is here no difficult question of what inferences are possible from equivocal or fragmentary facts. In the case at bar, the petitioners' own records and admissions resulted in a full and adverse proof upon the precise factual issue, leaving no conflict as to the evidentiary facts. Respondents therefore make no choice between the differing views of the function of judge and jury which were expressed in *Galloway*. Even accepting the stricter of the tests advanced, there is in this case "no room whatever for honest difference of opinion over the factual issue in controversy."[37]

Under the tests set forth in *Bigelow* and *Story Parchment*, the result is the same and perhaps still more clearly apparent. Upon the whole record there is no just and reasonable inference of damage; even less is injury the certain result of the wrong. On the contrary the claim is here destroyed, at its crux, by petitioners' own admissions and undisputed records, to such extent that petitioners' failures are to a certainty not the result of the claimed wrong.

Even if this were not the case, the result would be the same, because the petitioners here chose to take their chances and rely upon speculation, unrelated to any evidence in the case, to prove their actual losses. They

---

[37] Dissenting opinion of Mr. Justice Black in *Galloway v. United States*, 319 U.S. 372, 407 (1943). Compare *Maynard v. Durham & Southern R. Co.*, 365 U.S. 160, 162 (1961), where the court found the evidence sufficient in one of its aspects but as to a different aspect, the subject of a pivotal admission, found "no evidence sufficient for a jury."

offered the jury no alternative. In their effort to build up a large claim, which the facts would not support, they forfeited any real claim which they conceivably might have had.

Petitioners therefore offered the court below no more choice than they offered the jury. Whatever the reasoning chosen, the result was unavoidable.

VI

ASSUMING THERE WAS EVIDENCE OF ANY INDUCEMENT OF THE CANADIAN GOVERNMENT'S ACT OF REFUSING TO BUY FROM PETITIONERS, NEITHER THE ACT NOR THE INDUCEMENT WOULD GIVE RISE TO ANTITRUST LIABILITY.

Respondents have already shown that no evidence was offered relating to petitioners' Canadian business except:

(a) the fact that Eletcro Metallurgical Company of Canada, a Canadian corporation and a Carbide subsidiary, while acting as agent of the Canadian Government to buy vanadium for the Canadian steel mills, declined to buy Continental's vanadium;

(b) hearsay evidence that an employee of Electromet in New York, a different Carbide subsidiary, five months later and without the knowledge or approval of his employer or of any respondent, assertedly told Wolf that Continental should stay out of the vanadium business in Canada.

The evidence therefore showed no connection between the respondents and the refusal to buy.

The court below, however, chose to rest its decision on this aspect of the case upon the ground that the damage-creating act was not within the purview of the antitrust laws,[38] and such is the issue presented by paragraph 5 of the writ of certiorari. Against the possibility that this Court will choose to review the question, the respondents argue it here.

At the time of the refusal to buy, Electromet of Canada was specifically charged by the Metals Controller of Canada, a government official, with the duty of purchasing on behalf of that government all of the vanadium needed by the Canadian steel mills, and then allocating it to those mills. This was conceded in the complaint (paragraph 36, R. 20) and at trial (R. 809), and it is now conceded in petitioners' brief, where it is said that Electromet of Canada had been given "the power in Canada to allocate and control the importation of vanadium into Canada" (page 112). It was also beyond dispute that when the agency was created in early 1943, Canada was in the midst of war and vanadium was a strategic material, so that the purchasing power given was in the interests of the national security of Canada in time of war.[39] Such

---

[38]As previously noted, *supra*, p. 47, the trial court recognized the incompetency the evidence, as well as its irrelevance under the antitrust laws.

[39]The emergency nature of the powers granted, and the broad scope of the powers, are set forth in the various Orders in Council as attached to the Memorandum of Defendants Union Carbide Corporation and United States Vanadium Corporation Regarding Actions Undertaken on Behalf of the Government of Canada in Time of War, which document was included in the second supplemental record transmitted to the Court by the Clerk of the United States Court of Appeals for the Ninth Circuit on November 8, 1961. The Orders are not part of the printed record.

power, granted in wartime, was validly delegated as a matter of Canadian law,[40] and petitioners do not question the validity of the agency.

It further appears from petitioners' own offered evidence that the Canadian Metals Controller acquiesced in and thus ratified the very course of action taken by Electromet of Canada when petitioners called it to his attention. According to the offer of proof, Wolf wrote directly to the Metals Controller on April 26, 1943, saying that Electromet of Canada should be required to purchase from Continental if the Canadian steel mills so requested, and asked for confirmation that this was the policy of the Metals Controller (Exhibit 91 for ident., Vol. IX, R. 449-50, R. 821). The Metals Controller's office replied on April 29, 1943, that Electromet of Canada was charged with the duty of purchasing and that (Exhibit 93 for ident., Vol. IX, R. 451, R. 821):

> "Having the above in mind, we suggest it is advisable you make your own arrangements with Electro-Metallurgical Company."

Thus the Metals Controller, being specifically advised of Continental's complaint, declined to intervene, but instead confirmed his agent's plenary authority.

The issue, then, is whether this government act of Canada, carried out by a duly appointed agent acting within the established and confirmed scope of its agency for purposes of national defense, can now give rise to antitrust liability, or can be called into question at all.

---

[40]See *In the Matter of a Reference As to the Validity of the Regulations in Relation to Chemicals, etc.* [1943] Can. Sup. Ct. 1.

The respondents do not claim or suggest any antitrust exemption created by United States statutes, and accordingly cases like *United States v. Borden Co.*, 308 U.S. 188 (1939) and *Milk Producers Ass'n v. United States*, 362 U.S. 458 (1960) are irrelevant. Nor do respondents depend upon mere approval by a regulatory agency, and thus cases like *United States v. Socony Vacuum Oil Co.*, 310 U.S. 150 (1940); *Georgia v. Pennsylvania R. Co.*, 324 U.S. 439 (1945); and *Atchison, Topeka & Santa Fe Ry. Co. v. Aircoach Transport Ass'n*, 253 F.2d 877 (D.C. Cir. 1958) are beside the point. Nor do they claim general immunity from suit, as to themselves or as to Electromet of Canada, so that cases like *Sloan Shipyards Corp. v. United States S. Bd. E.F. Corp.*, 258 U.S. 549 (1922) and *United States v. Deutsches Kalisyndikat Gesellschaft*, 31 F.2d 199 (S.D.N.Y. 1929), are not in question.[41]

What respondents do assert is that, where the decisive and allegedly injurious act is the act of a foreign government within its own jurisdiction, it cannot be questioned in United States courts. It is not within the ambit of the antitrust laws or any other statute of the United States. *A fortiori*, no action for damages can be based upon it.

The Acts of an Agent of a Foreign Government in Its Own Jurisdiction Are Not Within the Antitrust Laws and Cannot Be Called Into Question.

The act of Electromet of Canada as agent of the Canadian government in refusing to buy is not within the antitrust laws for two major reasons: (1) the Sherman

[41] The cited cases are discussed by petitioners in their brief at pages 112-26.

Act is not intended to apply to governmental acts, and (2) no act of a foreign government within its own jurisdiction can be questioned in our courts.

This Court has very recently reiterated in *Eastern R. Conf. v. Noerr Motors*, 365 U.S. 127, 136 (1961) that:

> "* * * where a restraint upon trade or monopolization is the result of valid government action, as opposed to private action, no violation of the Act can be made out."

Similarly in *United States v. Rock Royal Co-op.*, 307 U.S. 533 (1939), *Parker v. Brown*, 317 U.S. 341, 350 (1943) and *Olsen v. Smith*, 195 U.S. 332, 344-45 (1904), this Court concluded that the Sherman Act had never been intended to reach the governmental acts of the states of the Union or the Federal Government, although in each case the same acts, if undertaken by private parties, would have been illegal.

Governments, like corporations, can only act through agents, and, accordingly, the act of a government agent within the scope of his agency is that of the government.

In *Parker v. Brown, supra*, this Court had occasion to consider the scope of the agency granted to the Raisin Proration Committee in California and concluded, despite the very broad grant of authority,[42] that it was the State which adopted and controlled the program (317 U.S. at 352). In *Olsen v. Smith, supra*, this Court held that indi-

[42] "Complete control and plenary direction were conferred upon the program committee . . . ." *Dickey v. Raisin Proration Zone No. 1*, 24 Cal.2d 796, 808; 151 P.2d 505 (1944); Cal. Stats. (1939) Ch. 894, Secs. 18, 19, pp. 2496-98. See also *Brown v. Parker*, 39 F. Supp. 895, 901 (S.D. Cal. 1941) *reversed Parker v. Brown*, 317 U.S. 341 (1943).

viduals who had been granted full power by a state to decide who could engage in the occupation of pilot, did not violate the Sherman Act by their "combination among themselves [to] exclude all others." 195 U.S. at 344-45.

In each of these cases neither the motive of the agent nor the effect of his activities was considered pertinent. In each, the agent or agents exercised governmental powers which in the private sphere would have amounted to an illegal restraint or a monopoly; in each, the private purpose of price fixing or monopolizing was to a greater or lesser degree evident; nevertheless, the courts refused to inquire into such purposes or effects once the act complained of was found to be within the scope of a valid governmental agency.

The ultimate reason for the judicial reluctance to interfere with such agencies is the courts' respect for the governmental choice. By hypothesis, the sovereignty concerned has knowingly chosen an interested agent; it has clothed him with such power as to permit abuse; deliberately it has taken the risk of a possible conflict of interest. The courts refuse to conclude that the agent's acts within the scope of his agency may be deemed a private act, regardless of his motives, when his sovereign principal has characterized his function in advance as a public function. See *United States v. Rock Royal Co-op., supra*, 307 U.S. at 560. If the courts reverse this policy, and do interfere, plainly the potential agent will be reluctant to accept the appointment, and, if he does accept, will be fearful of liability whatever he does and regardless of his motives. *C.f., Barr v. Matteo*, 360 U.S. 564 (1959). Thus the agent will not perform as he should, if he per-

forms at all, and the courts will have injuriously meddled with a governmental process in the name of a statute aimed at private acts alone.

Most particularly should this reasoning apply where, as here, the sovereignty not only grants a broad authority at the inception of an agency, risking the wrongful purpose of the agent, but later specifically reconfirms that authority when the agent's motive is called into question. As a matter of law the sovereign then ratifies the agent's authority as granted and adopts the acts complained of as its own. *The Paquete Habana*, 189 U.S. 453 (1903); *O'Reilly de Camara v. Brooke*, 209 U.S. 45 (1908); *Tiaco v. Forbes*, 228 U.S. 549 (1913); 1 Mechem, *Agency*, Secs. 430, 432, 459 (2d Ed. 1914); Restatement (Second) *Agency*, Sec. 93, Comment a, Sec. 94 (1958). In such case there should be no question that the acts concerned are governmental in character. The sovereign has so declared them, both before and after the fact, and thereby made them an integral part of its own governmental process.

Where the act of a foreign government within its own jurisdiction is concerned, a further and overriding principle dictates the same result. International comity requires that such acts of state be regarded as beyond the jurisdiction of our courts, for "the courts of one country will not sit in judgment on the acts of the government of another, done within its own territory." *Oetjen v. Central Leather Co.*, 246 U.S. 297, 303 (1918); *Ricaud v. American Metal Co.*, 246 U.S. 304, 310 (1918); *Underhill v. Hernandez*, 168 U.S. 250, 252 (1897); *Cf., American Banana Co. v. United Fruit Co.*, 213 U.S. 347 (1909); *Gladstone v. Ottoman*

Bank [1863] 1 H. & M. 505, 71 Eng. Rep. 221. On the occasions when our courts have by their decrees sought to control foreign acts and policies, immediate and widespread criticism has ensued abroad[43] and our courts have accordingly refrained from so doing in the absence of clear necessity.

Thus in *Vanity Fair Mills v. T. Eaton Co.*, 133 F.Supp. 533 (S.D.N.Y. 1955), *modified*, 234 F.2d 633 (2d Cir. 1955), *cert. denied*, 352 U.S. 871 (1956), the court refused to question the validity of defendant's Canadian trademark registration, regarding this decision as one within Canada's sole jurisdiction. It stated that to do so "might provoke justified resentment" (133 F. Supp. at 529), and the Appellate Court agreed, noting "the tenderness of Canadian authorities concerning what they consider foreign interference with their domestic concerns" (234 F.2d at 647, note 20). The fact that the Canadian registration and defendant's vigorous enforcement of its trademark rights in Canada effectively prevented plaintiff's exports to Canada, was regarded as beside the point.

Especially have the courts declined to intervene when the act complained of intimately concerns the national policy or national security of the foreign country.

---

[43]See, *e.g.*, the Canadian newspaper characterization of the decree in *United States v. Imperial Chemical Industry*, 105 F. Supp. 215 (S.D.N.Y. 1952), as "sheer effrontery" and as an "incredible" example of "American judicial arrogance." *The Globe and Mail*, Toronto, August 20, 1952, page 6, column 1; and see similar comments of the Master of the Rolls in *British Nylon Spinners, Ltd. v. Imperial Chemical Industry, Ltd.* [1953] 1 Ch. 19, 24, 25. See generally Brewster, *Antitrust and American Business Abroad*, pages 45-51 (1958); G. W. Haight, *Antitrust Laws and the Territorial Principle*, 11 Vand. L. Rev., 27, 33-34 (1957); J. T. Haight, *The Restrictive Practices Clause in United States Treaties*, 70 Yale L.J. 240, 251-54 (1960).

The cases in which a foreign government has set up a purchasing or selling agency in the United States for commercial purposes, like *United States v. Deutsches Kalisyndikat Gesellschaft*, 31 F.2d 199 (S.D.N.Y. 1929), (Pet. Brief, p. 117) are not pertinent here, not only because those corporations operated in this country but also because their purpose was commercial. Here the purpose was governmental. As the court stated in the case of *In re Investigation of World Arrangements*, 13 F.R.D. 280, 290 (D.D.C. 1952):

> "The supplying of oil to insure the maintenance and operation of a naval force—and in this day and age, an air force—is certainly a fundamental government function serving a public purpose. See *Berizzi Bros. v. The Pesaro*, 1926, 271 U.S. 562; 46 S.Ct. 611; 70 L. Ed. 1088."

So it is in this case. The purchase of vanadium in time of war for the Canadian steel mills was, under any standards, a governmental function, and the acts of Canada's agent for such purpose were governmental acts.

From the above authorities, it follows that liability cannot be predicated on the governmental act of Electromet of Canada alone. The significance of the alleged influencing of that governmental act remains to be considered.

The Act of Inducing a Government or Governmental Agency to Exercise Governmental Powers Is Not Cognizable.

The established rule is that if the decisive act complained of is governmental, the means by which private parties may have influenced or induced the decision are immaterial. *Eastern R. Conf. v. Noerr Motors*, 365 U.S.

127 (1961); *United States v. Rock Royal Co-op.*, 307 U.S. 533 (1939); *American Banana Co. v. United Fruit Co.*, 213 U.S. 347 (1909). So in the *Noerr* case this Court said (365 U.S. at 136):

> "We think it • • • clear that the Sherman Act does not prohibit two or more persons from associating together in an attempt to persuade the legislature or the executive to take particular action with respect to a law that would produce a restraint or a monopoly."

Similarly, in *Rock Royal* this Court discussed the activities of private parties in proposing, drafting and securing a favorable order from an agency which they dominated and concluded that such activities were beyond the scope of the antitrust laws.

Many years ago Justice Holmes applied the same principle in the foreign field in *American Banana*. Whatever other aspects of the opinion have since been disapproved, the essence of his decision, expressed below, is still sound (213 U.S. at 358-59):

> "The fundamental reason why persuading a sovereign power to do this or that cannot be a tort is not that the sovereign cannot be joined as a defendant or because it must be assumed to be acting lawfully. • • • The fundamental reason is that it is a contradiction in terms to say that within its jurisdiction it is unlawful to persuade a sovereign power to bring about a result that it declares by its conduct to be desirable and proper. It does not, and foreign courts cannot, admit that the influences were improper or the results bad. It makes the persuasion lawful by its own act. The very meaning of sovereignty is that the decree of the sovereign makes law."

Similar is the conclusion of the English court, faced with the same problem, in *Gladstone v. Ottoman Bank* [1863] 1 H. & M. 505; 71 Eng. Rep. 221, where the allegation was that the individual defendants "concerted a scheme" for inducing the Sultan of Turkey to revoke plaintiff's exclusive concession and grant it to defendants. The court sustained a demurrer, saying that such efforts could not be considered:

> "It is the act of a foreign sovereign power which overrides everything" (71 Eng. Rep. at 224).

And see *Hewitt v. Speyer*, 250 Fed. 367, 371 (2d Cir. 1918); *Stark v. Howe Sound Co.*, 266 N.Y.S. 368 (Sup. Ct. 1933) *aff'd*, 269 N.Y.S. 936 (App.Div. 1934); *Frazier v. Foreign Bondholders' Protective Council*, 125 N.Y.S. 2d 900, 904 (App.Div. 1953).

In each of the cited cases the influence leading to the governmental act—whether by means of bribery, persuasion, or domination—is merged in the culminating decision of the sovereign. The courts do not examine into the means and motives, nor into the effectiveness, of those who are claimed to have induced the sovereign's decision, because whatever they did is part of the political process which the sovereign permits, and in the end approves, by its own act. The influence may be combatted in the political arena, but not after the fact in the courts, for to do so is necessarily to question the finality of the governmental act itself.

The case is, of course, different if there are in evidence private acts as well. Thus in *United States v. Sisal Sales Corp.*, 274 U.S. 268 (1927), cited by petitioners in their

brief (pages 118-19)[44] the defendants not only secured a monopoly of a supply of goods in a foreign country but also set up an exclusive sales agency in the United States, which was able to exercise the monopoly here. The facts were, as this Court said in *Sisal*, "radically different" from the facts in *American Banana* (274 U.S. at 275), because in *Banana* the claim was based "upon acts done outside the United States and not unlawful by the law of the place" whereas in *Sisal* the object was a "complete monopoly of both internal and external trade" (274 U.S. at 276).

In the present case nothing of the kind involved in *Sisal* is even alleged, much less proved. If anything at all is shown by the offer of proof, which respondents deny, it is no more than the exercise of some unspecified influence upon a government resulting in a governmental act which itself is claimed to be wrongful. This is precisely the case disposed of by *Noerr*, *Rock Royal* and *American Banana*.

No Action for Damages Can Be Based Upon the Governmental Act in Canada.

There is, however, a further though related reason why petitioners cannot prevail, and that is because they seek *damages*, which necessarily must result from the govern-

---

[44]The petitioners also cite (p. 119) in this connection *United States v. E. P. Oldham Co.*, 152 F. Supp. 818 (N.D. Cal. 1957), but that case involved no governmental act at all.

mental act if there are any damages at all. The present case does not even involve a claim as to any "direct injury as an incidental effect of the . . . campaign to influence governmental action", discussed and rejected in *Noerr*, 365 U.S. at 143. Here there was no attempt to show that the alleged influence, whatever it was, in itself caused damage. Any injuries stemmed solely from Canada's refusal to buy.

But if the injurious act is itself beyond attack, no damages are recoverable. The gist of any treble damage case is the overt act, or acts, which are claimed to cause injury. As said long ago by Mr. Justice Brandeis, in *Keogh v. C. & N.W. Ry. Co.*, 260 U.S. 156, 163 (1922), "injury implies violation of a legal right," so that if, as in *Keogh*, damage stems from a governmental act, no legal injury results. Later, in *Georgia v. Pennsylvania R. Co.*, 324 U.S. 439 (1945), this Court reaffirmed the *Keogh* reasoning, holding that, although the State of Georgia could *enjoin* a conspiracy to fix flat rates, it could not secure *damages* resulting from the rates ultimately set by the Interstate Commerce Commission, for the reason that the rate itself was made the legal rate by the I.C.C.

The same principle was decisive in *Okefenokee Rural Elec. Mem. Corp. v. Florida P. & L. Co.*, 214 F.2d 413 (5th Cir. 1954), the facts in which were strikingly similar to those in the case at bar. The complaint alleged that the State Road Department refused to issue plaintiff a permit because defendants were conspiring to divide the market among themselves and so persuaded the Depart-

ment. The reasoning of the Court of Appeals for the Fifth Circuit is directly applicable here (214 F.2d at 418):

> "In brief, all of the damages averred in the complaint and all that are shown to be probable have been suffered or will accrue from the denial of the right to use this 'only feasible route.'. . . . The plaintiff had no legal right to use the state highway without a permit from the State Road Department, nor the county roads without permission of the Board of County Commissioners, and those authorities have decided against the plaintiff. So long as their decisions stand the plaintiff has not been legally injured, notwithstanding it may have been irreparably damaged."

The result is that even if, contrary to *Noerr*, the alleged influence could be called into question and condemned in a prosecution by the United States, still petitioners would have no legal basis for a damage recovery. Their claimed injury results solely from the sovereign act of the Government of Canada.

CONCLUSION

The statement of questions presented which petitioners have pressed upon the Court, and upon which the writ of certiorari was in part granted, describes issues where none in fact exist. There is no conflict in the crucial evidence. No legal question is fairly presented by the record.

Petitioners left neither of the courts below a choice as to the result. The judgment should now be affirmed, or the writ dismissed as improvidently granted.

Dated, April 1, 1962.

(Appendices A and B Follow)

Appendix A

Respondents file with their Brief in Opposition, under Rule 21(6), certified copies of appellants' designation of record and the designations of the record for printing filed by both parties in the court below, together with a certificate of the clerk of the court below stating that the designations for printing included all of the testimony in the trial transcript. Below are reprinted the appellants' designation of record and the clerk's certificate, omitting in each instance the title of court and cause.

DESIGNATION OF RECORD

To the Clerk of the Above-Entitled Court:

Plaintiffs-appellants in the above-entitled case having appealed to the United States Court of Appeals for the Ninth Circuit from a final judgment heretofore made and entered herein, you are hereby requested to prepare certified record of appeal in accordance with the rules of the said Court of Appeals and to file the same with the Clerk of the said Court in due course, as provided by law, to include the following:

1. The complete record and all of the proceedings and evidence in the above-entitled action.

2. This designation of record.

Dated: June 30, 1958.

Joseph L. Alioto

Joseph L. Alioto
Attorney for Plaintiffs-Appellants

CERTIFICATE OF CLERK, U. S. COURT OF APPEALS FOR THE NINTH CIRCUIT, TO SUPPLEMENTAL RECORD CERTIFIED UNDER RULE 21 OF THE REVISED RULES OF THE SUPREME COURT OF THE UNITED STATES.

I, William E. Wilson, as Chief Deputy Clerk of the United States Court of Appeals for the Ninth Circuit, do hereby certify the foregoing documents: designation of appellants filed in the District Court, appellants' statement of points and designation or record, letter amending designation; designation of appellees' Union Carbide, et al., supplemental designation of appellees' Union Carbide, et al., letter of Clerk, U. S. Court of Appeals of April 26, 1960 to be a full, true and correct copy of documents requested by the appellees and certified as a supplemental record under Rule 21 of the Revised Rules of the Supreme Court of the United States as the originals thereof remain on file and appear of record in my office.

I further certify that I have compared the designations of the record of printing filed by the respective parties as transmitted herewith, with the reporter's transcript in this case in the United States District Court for the Northern District of California, and that the parties did designate for printing all portions of the said reporter's transcript which contain the testimony of the witnesses, and omitted portions consisting of certain statements and arguments of counsel and colloquies between court and counsel.

Attest my hand and the seal of the said The United States Court of Appeals for the Ninth Circuit, in the City and County of San Francisco, State of California, this 7th day of September, 1961.

(Seal)

William E. Wilson

William E. Wilson
Chief Deputy Clerk

No. 16149

Continental Ore Co. v. Union Carbide

Gentlemen:

The Court has requested my office to suggest to counsel in the above entitled case that it would be helpful to the Court if counsel would file additional memoranda (an original and three copies, which may be typewritten) pointing to every specific place in the record where there is testimony or documentary evidence which will show or tend to show:

1. The cause of the termination of Apex Smelting Company's arrangement with Continental.

2. The cause of the termination of Imperial Paper and Color Corporation's arrangement with Continental.

3. The cause of the cessation of shipments by Continental of vanadium compounds from its Long Island premises.

4. The cause of the failure of Continental to work out an arrangement with Climax Molybdenum Corporation.

The Court requests that this memoranda be filed within two weeks from today. Thank you.

Sincerely,
Frank H. Schmid
Clerk

Preliminary statement 2

II

Respondents have not answered Question 1 of the writ granted by this court 6

A. The action involves exclusion of actual competition... 6

1. There existed an exclusionary conspiracy to monopolize 6

2. Respondents were bound not to conspire to refuse to deal with petitioners and each was required to sell oxide 13

3. The so-called "lost opportunities" were in fact excluded by illegal means 14

B. The record contained numerous acts of impact or contact on manufacturing associates and a successful monopolization which prevented the entry into the vanadium industry with substitute raw materials or oxides 15

1. APEX: The destruction of the independent mills and respondents' refusal to deal with petitioners caused a lack of supplies to Apex and its failure, thereby depriving petitioners of a manufacturing associate 15

2. CLIMAX: The proof of an existing contractual arrangement with Climax supports the inference that continued production would have been sustained but for respondents' threats of reprisal..... 20

3. IMPERIAL: The specific reason assigned by Imperial for its unwillingness to produce ferrovanadium was its inability to obtain ample sources of vanadium-bearing materials 21

4. DURANGO: Petitioners have always asserted that the acquisition of the Durango mill interfered with the development of the plans of the independents to form an association 23

C. The proof of damages or the attempted proof of damages by petitioners complied with applicable law.... 25

III

Page

The Bigelow case rejected the use of minority view "legal cause" concepts used in negligence cases in actions based on the intentional interference with the free market and a breach of congressionally imposed duties 28

IV

Petitioners' offer of proof was sufficient to present the issues to the court 29

V

The conspiracy of respondents to monopolize the vanadium industry and to eliminate all competition, including petitioners', took place in the United States. The elimination of petitioners' Canadian customers by preventing petitioners from exporting vanadium into Canada took place in the United States. The fact that respondents used one of their Canadian subsidiaries which had an agency agreement with Canada to assist the elimination does not give respondents antitrust immunity 34

A. The Sherman Act reaches the private use of lawful powers delegated by a foreign government when used to interfere with domestic commerce and stifle American industry pursuant to a conspiracy to create a monopoly in the United States 34

B. An agent of a foreign country engaged in purchasing United States commodities is not afforded sovereign immunity. Manifestly if a government corporation is not afforded immunity a purely private commercial corporation cannot acquire immunity 36

C. Cases such as Parker v. Brown, 317 U.S. 341 (1943), holding that state action as distinguished from private action does not come under the antitrust laws are not in point 38

D. Union Carbide and VCA are both liable for all injuries resulting from the overall conspiracy 39

E. The Noerr case holds that the Sherman Act does not control joint action to lobby or to influence the passage of legislation 40

CONTINENTAL ORE COMPANY, a Partnership, and HENRY J. LEIR, ERNA D. LEIR, LINA SCHLOSS, as Individuals and as Partners under the trade name and style of CONTINENTAL ORE COMPANY, *Petitioners*,

vs.

UNION CARBIDE AND CARBON CORPORATION; UNITED STATES VANADIUM CORPORATION; ELECTRO METALLURGICAL SALES CORPORATION; ELECTRO METALLURGICAL COMPANY OF CANADA, LIMITED; VANADIUM CORPORATION OF AMERICA, *Respondents*.

On Writ of Certiorari to the United States Court of Appeals for the Ninth Circuit

REPLY BRIEF OF PETITIONERS

I

PRELIMINARY STATEMENT.

In their briefs, respondents initially attempt to reframe the questions on which this Honorable Court granted certiorari so as to fit their arguments. Nowhere in their briefs do respondents point out where these questions misstate the issues presented by the record and the opinion of the Court below. And nowhere in respondents' brief in opposition to petitioners' Petition for a Writ of Certiorari did respondents even suggest that petitioners misstated any issue presented by the record, which would seem to be the proper place to raise such an objection.

Secondly, respondents attempt to create the impression that basically this is a "fact" case, pure and simple. Nothing could be further from the truth. Each question set forth in the writ of certiorari presents a serious question of law, one of these questions going to the basic right of a litigant to have all issues decided by the trier of fact and not summarily by an Appellate Court.

Respondents persist in an artful refusal to view the evidence steadily, to view it whole and to consider it in the light that an Appellate Court is required to consider the evidence in determining whether the case should be removed from the jury and decided on a peremptory directed verdict.

This Court has recently expressed a disapproval of peremptory rulings by Courts which take anti-trust cases away from the jury. *Poller v. Columbia Broadcasting System, Inc.* ..... U.S. ....., 82 S.Ct. 486 (1962); *Klor's, Inc. v. Broadway-Hale Stores, Inc.*, 359 U.S. 207 (1959); *Radovich v. National Football League*, 352 U.S. 445 (1957).

Respondents' factual statement and petitioners' factual statement show that there was a serious factual conflict on the issue of causation. This conflict is emphasized by a reading of the Appellate Court's opinion.

Under a factual situation such as presented in the instant case, the cases of *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931) and *Bigelow v. RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946) are controlling. Nowhere in their briefs have respondents offered any sound distinction between the case at bar and the *Story Parchment* and *Bigelow* cases.

Under these cases a conspirator is held responsible for the results which he *intends* to occur by his illegal acts and which do in fact occur.

The most recent statement of this principle occurs in *Elyria-Lorain Broadcasting Co. v. Lorain Journal Co.*, (6 Cir. 1961) 298 F. 2d 356. In that case the Court stated (p. 359):

> "In the usual anti-trust case, proximate cause may present the problem of whether the plaintiff was within the 'target area' of the proscribed activities. Karseal Corporation v. Richfield Oil Corporation, 221 F. 2d 358 (C.A. 9, 1955). But, certainly this can be no problem *here*, where the defendants' acts were admittedly aimed only at the plaintiff broadcasting company."

In the instant case there is no question that petitioners were in the "target area". Burwell admitted that his instructions from his superiors were to eliminate *all* possible competition, and, specifically, he testified that the only reason that Carbide would not sell vanadium to Mr.

Leir was "they wanted to keep him out of the vanadium business. No other reason" (R. 547). Bransome, president of VCA, substantiated this exclusionary policy toward petitioners when he told Burwell that they were trying to keep Mr. Leir out of the vanadium business. (R. 225-226.)

Pursuant to this intent, these "assumed" conspirators performed all the predatory acts set forth in Petitioners' Opening Brief at pages 18 to 63.

In their factual statements, both respondents have made misstatements of the record which should be corrected immediately, so that there will be no confusion as to the questions presented.

1. The Court below "assumed" for the purposes of its opinion that "the evidence was adequate to support a jury finding that the defendants committed the violations of the Sherman Act claimed, and that the defendants did the acts mentioned as part of a plan to monopolize the marketing of ferro-vanadium." (R. 2572.) The Court then stated specifically that its "problem" was "to determine whether or not the evidence could have justified a jury's finding that defendants' illegal acts were in fact the cause of plaintiffs' failure in various adventures into the business of producing and selling ferro-vanadium and Van-Ex." (R. 2572.)

Therefore, there is no question that the opinion "assumed" or "admitted" for its purposes that respondents had violated the anti-trust laws and "did the acts mentioned as part of a plan to monopolize" the ferrovanadium industry. At page 5 of its brief respondent VCA

concedes this. Respondents' attempts to engage in a battle of semantics as to whether the lower Court "assumed" or "admitted" that they violated the anti-trust laws and monopolized the vanadium industry is just an attempt to introduce a non-existing issue.

2. There is no denial by respondents that, except for the ill-fated challenge by petitioners, they, at all times herein pertinent, maintained a 100% two-company monopoly of ferrovanadium.

3. Blair Burwell, without any doubt whatsoever, was USV's chief executive officer and the directing force behind all of Carbide's activities on the Colorado Plateau. His impressive qualifications are set fully at page 16, footnote 3, of Petitioners' Opening Brief. Carbide's attempt to disown him as "Leir's friend" is childish, an abandonment that even their co-conspirator VCA could not swallow. (See VCA Brief, page 4, footnote 3.) The contemporaneous documents and correspondence, letters from Carbide's files, fully support Burwell.[1] Such letters were written long before Mr. Leir came to the United States.

4. Respondents refuse to recognize that the elimination of petitioners was but a facet of respondents' overall conspiracy to monopolize all phases of the vanadium industry. This overall conspiracy certainly was "confessed" by Burwell in no uncertain terms. *Union Carbide*

---

[1]See *Union Carbide & Carbon Corp. v. Nisley*, (10 Cir. 1962) 1962 Trade Cases, paragraphs 70, 222, p. 75, 805 at 75, 831, where the 10th Circuit Court, in speaking of Mr. Burwell, states "While these incriminating statements may have been apocryphal, no one familiar with this record can doubt the power and ingenuity of the responsible maker of the statements to make good his boast."

and Carbon Corp. v. Nislay, (10 Cir. 1962) 1962 Trade Cases para. 70, 222, p. 75, 805, clearly sets forth this overall conspiracy and the various violations of the anti-trust laws utilized by respondents to monopolize all phases of the industry.

With these preliminary statements, we proceed to answer respondents' arguments.

II

RESPONDENTS HAVE NOT ANSWERED QUESTION 1 OF THE WRIT GRANTED BY THIS COURT.

A. The action involves exclusion of actual competition.

1. There existed an exclusionary conspiracy to monopolize.

Nowhere in their briefs have either of the respondents met or answered petitioners' contention that the decision below is in direct and basic conflict with the purposes of Congress in establishing liability on those who conspire to monopolize, with the decisions of this Court which have rejected the determination of "legal cause" as a matter of law in Sherman Act litigation and which allow damages to those who suffer from the *natural consequences of wrongful and intended acts.*

We must start with the following facts which are now not seriously challenged.

1. Respondents committed violations of the Sherman Act as claimed in the complaint.

2. Respondents did all the acts mentioned by petitioners in their complaint as part of a plan to monopolize the marketing of ferrovanadium.

3. Burwell, the chief executive officer of USV, testified directly that Carbide, one of the conspirators, had as its purpose and intent the exclusion of all independent and potential sources of supply for petitioners. See Petitioners' Opening Brief, pages 28 to 36.

In this connection, Mr. Burwell testified that pursuant to his instructions to eliminate all potential competition he eliminated:

1. *Anaconda Copper Co.*: He purchased its production only "to keep it off the market" (R. 297);

2. *Gateway Alloys*: "We wanted to keep another vanadium operation from getting started" (R. 292-293);

3. *Mesa Vanadium Mill*: The entire mill was acquired by USV "to keep it out of production" (R. 303);

4. *Durango Mill*: This mill was acquired because "we wanted the plant to keep control of the production of vanadium" (R. 246);

5. *Nisley & Wilson Mill*: For the predatory practices instituted against this mill, see Petitioners' Opening Brief, pages 35-36; 46, and *Union Carbide & Carbon Corp. v. Nisley, supra*;

6. *Loma Mill*: USV commenced purchasing unneeded ore located in this mill's tributary areas to keep the ore "away from this mill" (R. 303-306);

7. *Mammoth St. Anthony Mining Co.*: Burwell purchased its production to "keep it off the vanadium market" in the United States (R. 178);

8. *Blanding Mines*: See Petitioners' Brief, p. 34;

9. *North Continental Mill:* Turned into an ore buying station (R. 134, 121).

4. Burwell testified that there was an admitted policy on the part of respondents to exclude petitioners. (Petitioners' Brief, pages 36 to 39.) In this respect, Burwell testified that Carbide "did not want to sell vanadium to Mr. Leir because they wanted to keep him out of the vanadium business. No other rea. n." (R. 547.) And Burwell testified that in a meeting with Mr. Bransome, chief executive officer of VCA, a proposed operation was not sanctioned because "that would put Mr. Leir in the vanadium business and that is what we are trying to keep him out of." (R. 225-226.)

5. There was substantial evidence that respondents interfered with every source of supply available to petitioners and with their manufacturing associates. (Petitioners' Brief, pages 39 to 56.)

6. Both respondents consistently refused to sell vanadium oxide to petitioners. (Petitioners' Brief, pages 56 to 63.)

7. Petitioners, who were successful in other fields of metals and alloys, were in fact required to leave the vanadium industry.

The sum total of the evidence then is that respondents had entered into a conspiracy to monopolize the vanadium industry at all its levels, that as a part of this conspiracy they had as their intention the premeditated elimination of all competition, that they in fact eliminated all independent sources of supply and all mills that could pos-

sibly nurture an independent vanadium operation, that there was a policy in both companies to prevent petitioners from entering or remaining in the vanadium industry, that executive officers of both companies stated that they did not want petitioners in the vanadium industry, and finally, that petitioners were in fact caused to leave the vanadium industry. The end result is that which respondents intended to occur by their company policies and practices in violation of the antitrust laws did occur. *Elyria-Lorain Broadcasting Co. v. Lorain Journal Co.* (6 Cir. 1961) 298 F.2d 356.

Certainly an intentional wrongdoer is to be held liable in the Courts for all the natural consequences of his intended acts. He cannot be heard to say that the precise manner of the capitulation of sources of supply or manufacturing associates was not foreseen, having embarked on a program which insured that these sources and associates would fall. Respondents have made no real answer to the application of ordinary rules of proximate cause. Rather they misstate the issue as one in which a competitor seeks damages only upon proof of violation; that the case at bar involves no acts of impact or contact or natural tendency to cause harm, the proof of which establishes liability. But in contrast to the legal explanation of the issue before the Court, the respondents in their factual statement only seek latter-day excuses for conduct which would crush any competitor. The logical and rational answer is simply that the respondents would not have done the acts proven here had they been assured of the demise of these petitioners for other reasons. But the issue is one of fact for the jury.

As stated by this Court in *Wilkerson v. McCarthy*, 336 U.S. 53 (1949):

> "It is the established rule that in passing upon whether there is sufficient evidence to submit an issue to the jury we need look only to the evidence and reasonable inferences which tend to support the case of a litigant against whom a peremptory instruction has been given."

Under respondents' interpretation of the *Eastman Kodak*, *Story Parchment* and *Bigelow* cases, as a matter of law there can be no recovery without proof of a complete inability to proceed in market entry during every moment of the conspiracy's march to a complete one hundred percent monopolization. Thus respondents look upon the fact that petitioners did receive some independent oxide production as a great insulator from liability despite the showing that the failures of these very suppliers were attributable to illegal practices of the respondents in their preemption of the field.

Respondents would further categorize *Bigelow* as not really a causation case. But this Court stated:

> "Hence, it is said, petitioners' evidence does not *establish the fact of damage*; and that further, the standard of comparison which the evidence sets up is too speculative and uncertain to afford an accurate measure of the amount of damage.
>
> • • •
>
> In each case we held that the evidence sustained verdicts for the plaintiffs, and that in the absence of more precise proof, the jury could conclude as a matter of just and reasonable inference from the

> proof of defendants' wrongful acts and their tendency to injure plaintiffs' business, and from the evidence of the decline in prices, profits and values, not shown to be attributable to other causes, that defendants' *wrongful acts had caused damage* to the plaintiffs." (327 U.S. 263-264.) (Emphasis added.)

But the petitioners were not bound to show a complete inability to obtain all supplies.

In *Standard Oil Co. v. United States*, 221 U.S. 1, (1910) it was held that defendants' failure to control crude oil and the abundance of said oil showed *not* that there was little chance of success for monopolization, but rather that control of the refined product as a matter of law carried with it control of the field. (Id. at 77.)

In *Associated Press v. United States*, 326 U.S. 1 (1945) this Court rejected the argument that the availability of alternative news supply justified exclusionary by-laws.

American Tobacco Co. v. United States, 328 U.S. 781 (1946) established that in a Section 2 case it is not necessary to establish power and intent to exclude *all* competitors, or to show a conspiracy to exclude *all* competitors.

In *W. W. Montague v. Lowry*, 193 U.S. 38 (1904) it was held that a combination could *not* claim that there was no showing of injury simply because the competitor could easily join the defendants' association, and that a combination could not assume the right to tell businessmen how to exercise their right to compete.

In *Eastman Kodak Co. v. Southern Photo Materials Co.*, 273 U.S. 359 (1927) the ability of the plaintiff to obtain a competitive line did not prevent the award of

extensive damages arising from the loss of the Kodak line even though it was urged that the evidence showed that the total business of the plaintiff earned more money after the loss of the Kodak line.

In *C. E. Stevens Co. v. Foster & Kleiser Co.*, 311 U.S. 255 (1940) it was held that plaintiff need not aver that he was wholly unable to buy posters in order to claim damages under the anti-trust laws.

In *Keifer-Stewart Co. v. Joseph E. Seagrams & Sons*, 340 U.S. 211 (1950) recovery was allowed against two conspirators in spite of the availability of dozens of other available liquor supplies.

In *Klor's Inc. v. Broadway Hale Stores, Inc.*, 359 U.S. 207 (1959) the right to a trial by a trier of fact was allowed despite the availability of alternative brands to a household appliance dealer.

Thus, in the instant case, the fact that there were some vanadium oxide millers available which were utilized by petitioners to their best business judgment does not in any manner allow these respondents to claim as a matter of law that their conspiracy's progress did not harm petitioners. The proof in this case showed that these independent oxide millers, i.e., Gateway, Morrison, Blanding, Nisley and Wilson and finally North Continent were all thwarted in their production of oxide by the conspiracy itself. The fact that in a given month, in a given time, petitioners had some supply available to them simply converts the action from one based on attempts to enter the market without the opportunity to have any contacts allowing entry, into one of exclusion of an actual com-

petitor. See *William Goldman Theatres, Inc. v. Loew's, Inc.* (3 Cir. 1945), 150 F.2d 738, involving a refusal to sell first run pictures causing plaintiff's theatre to remain closed, in which the Court allowed extensive damages for the closing of a first run theatre which could have acquired lesser runs.

2. Respondents were bound not to conspire to refuse to deal with petitioners and each was required to sell oxide.

Respondents further urge that petitioners rejected plans from independent millers and others to expand their production or to open a new venture.

These offers from independents, even if any were made, patently have no materiality to the legal principle that respondents were themselves under an obligation to deal with petitioners, to sell them oxide, and not to discriminate against them. The record showed that respondents were monopolists. Union Carbide possessed 77% control of the domestic supply of vanadium oxide (Pl. Ex. 136, R. 1253), VCA held 64.7% of the sales of ferrovanadium. (Pl. Ex. 138, R. 1256.) As monopolists, respondents were under a duty to deal with petitioners and not to discriminate against them. *United States v. Aluminum Co. of America* (2 Cir. 1945), 148 F.2d 416; *United States v. Griffith*, 334 U.S. 100 (1948). But such was not done in the instant case. The record shows blatant discrimination. VCA was being supplied its vanadium oxide needs by its co-conspirator Union Carbide at below market prices. (Pl. Ex. 8, R. 2073-2074, 117; Pl. Ex. 46, R. 2128, 294; Pl. Ex. 150, R. 2340, 1583.) Yet petitioners' requests were consistently denied. (Table, Pet. Op. Br., p. 59.)

3. The so-called "lost opportunities" were in fact excluded by illegal means.

Once respondents had entered into their cartel arrangement of mutual assistance, they were in no legal position to demand that competitors, targets of their conspiracy, finance new mills or enter into hazardous expansions, especially when existing independent mills were being eliminated by the monopoly. *United States v. Aluminum Co. of America* (2nd Cir. 1945), 148 F.2d 416; *Gamco, Inc. v. Providence Fruit & Produce Bldg.* (1st Cir. 1952), 194 F.2d 484; *American Federation of Tobacco Growers v. Neal* (4th Cir. 1950), 183 F.2d 869.

For example, respondents claim that the National Vanadium Corp. was an opportunity which petitioners failed to utilize for an independent source of oxide. (VCA Brief, p. 32; UCC Brief, p. 34.)

But at the time respondents claim petitioners should have utilized this company as a source of supply, it was writing to Mr. Leir:

> ". . . You will probably not be surprised to hear that the U.S. Vanadium Corp. are endeavoring to tie up our product if we are successful and also to block us in every way possible if we do not line up with them." (Df. V.'s Ex. V-1-Q, R. 2508.)

The other alleged "lost opportunities" i.e., Blanding, Morrison [Loma] and Ackermann (VCA Brief, p. 32; UCC Brief, pp. 32-33) were shown to have been directly thwarted by the respondents. See Petitioners' Opening Brief pages 34 to 46 for the evidence as to how these mills were eliminated by respondents.

Respondents cite no authority for their proposition that conspirators to a monopolization can defend an antitrust action by showing that the excluded competitor did not invest in all offers to deal. Actually the law is directly to the contrary for monopolists cannot extract a monopolist's advantage. *Associated Press v. United States*, 326 U.S. 1 (1945).

B. The record contained numerous acts of impact or contact on manufacturing associates and a successful monopolization which prevented the entry into the vanadium industry with substitute raw materials or oxides.

1. **APEX: The destruction of the independent mills and respondents refusal to deal with petitioners caused a lack of supplies to Apex and its failure, thereby depriving petitioners of a manufacturing associate.**

Respondents represent in their briefs that Apex, throughout its operations, had all the oxide it needed and that a plentiful additional supply was available to it. (VCA Brief, p. 30.) They claim that Mr. Leir and Apex erred in not stockpiling oxide prior to the start of the Apex contract in August or September, 1940. Respondents claim that Mr. Leir was wrong in recommending that the 20,000 pounds of oxide expected to come from Blanding in September and October be resold. (Id. p. 31 citing Df. V.'s Ex. V-1-J, R. 2498-2499.) But Mr. Leir expected to obtain production from the Rifle mill and two new expected mills in Arizona and Los Angeles. (Id.) Neither was able to produce oxide. (Pl. Ex. 18, R. 134, 125. Note: The Rifle mill shown thereon as the USV Rifle plant is not the small plant referred to in Mr. Nisley's testimony, R. 639.) In 1941 only de minimis sales of oxide were made to others. (Pl. Ex. 119, R. 2212, 1065.)

In respect to the Apex association, respondents also claim that petitioners did not really request oxide at all from the respondents and if they did, they did not "follow" these requests through. (VCA Brief, pp. 32-33.) This is completely contrary to the record. A request to do business with Electromet was made in June 14, 1941. (Pl. Ex. 77, R. 176-177, 776.) This was followed by a request that petitioners be allowed to convert oxide for the account of respondents. (Id., and Pl. Ex. 132, R. 2261-2262.) This was followed by a request through OPM that respondents sell petitioners oxide. (Pl. Ex. 132, R. 2265.) It is manifest that the petitioners were "following up" their requests. It is also important that petitioners never did get their supplies.

Next, we are told by respondents that Shattuck or North Continent was gutting Apex with supplies of between 12,000 to 18,000 pounds of oxide every couple of weeks in October, 1941. (VCA Brief, p. 34, citing Df. V's Ex. V-1-S; R. 1155-1157.) But the record showed that in September, 1941, Apex informed petitioners that it was not getting a sufficient quantity of oxide to run facilities *on half time*. (Df. V's Ex. V-1-Q; R. 2512A.) The record also shows Apex was refused supplies by respondents and was turned down by the respondents after positive requests through the OPM were scoffed at by the respondents. The record shows that nevertheless petitioners persisted in their efforts to acquire oxide as did Apex (R. 1158) and that during October to December, 1941 there was a frantic but futile attempt by petitioners to obtain necessary oxide supplies for their Apex arrangement. (Pl. Ex. 144, R. 2266, 1313; Pl. Ex. 145, R. 2270, 1315; Pl. Ex. 146, R. 2271, 1320.)

In its Brief, respondent VCA conveniently skips these requests for oxide made during the period October to December, 1941, just prior to Apex's capitulation. It relegates these important requests to footnote 16. (VCA's Brief, p. 34.) Respondents simply do not come to grips with the admissions by Apex which appear in this record that Apex specifically told the United States government agencies in requesting oxide that the reason for the fact they were not producing at capacity was *because of lack of raw material.* Respondents seek to weaken the effect of this testimony by citing statements by Mr. Bayer to claim that these referred to "future operations" and "distant date". (R. 1358.) But the record shows that Mr. Bayer specifically testified that Apex was not operating at full capacity because of lack of raw materials. The record shows:

> "Q. Well, now, specifically, the statement that you make in that letter with respect to not operating full capacity because of a lack of raw materials, that statement was true when you made it, was it not, sir?
>
> A. As far as I know, yes." (R. 1319.)

Also, it is to be remembered that 50,000 pounds of oxide on hand would still be only one half of estimated capacity for one month, because the oxide ratio is about two pounds for one pound of V. (Pl. Ex. 146 at R. 2275.)

In this respect, neither respondent has shown that petitioners ever had a steady, dependable source of supply. Certainly, sporadic shipments which got away from respondents or which they made available at strategic times when their activities had eliminated petitioners' customers

cannot protect them from the obvious implications of the testimony in this record that respondents conspired to eliminate all sources of supply and were successful in this respect.

Respondents claim that the VCA-Apex arrangements involved only the offer of equipment by Apex to VCA. (VCA's Brief, pp. 35-36.) The memorandum of April 14, 1942 (Pl. Ex. 62, R. 168), clearly shows that Apex offered VCA the names of its suppliers and promised to stay out of the vanadium business. The statement appearing in the memorandum that "He further stated that he would furnish us with the names of all their suppliers of Ores and Oxide, the principal ones apparently being Shattuck Chemical Company and Nisley & Wilson" creates an inference this information was supplied by Apex after VCA's request and shows that Mr. Christiansen was being examined as to Apex's future course of conduct. The inference is clear that upon being satisfied with the fact that Apex would stay out, "We had an interesting discussion concerning low copper grained aluminum . . ." (Id., R. 169.) It must be remembered that the negotiations were being pushed by VCA with Apex at a time when Apex had a binding legal 14-year contract with petitioners.

The purpose of these meetings is clear from the letter from Mr. Sterling (VCA) to Mr. Kett (VCA), wherein Mr. Sterling states (Pl. Ex. 62, R. 166):

> "Apex Smelting Co.—It is nice we won't have to worry about them after July 1st." (R. 166.)

In their opening brief, petitioners felt that the implications of this transaction were obvious. However, in view

of respondents' attempt to rationalize this transaction as an innocuous sale of equipment, petitioners feel it should be characterized for what this transaction actually was, a commercial bribery which had as its reward Apex's withdrawal from the vanadium industry and its abandonment of its relationship with petitioners.

Respondents would also ignore the devastating effect on Apex caused by Apex's loss of the Blanding production. The contemporaneous letters of Mr. Leir and Apex show that this was a crucial matter to Apex. Mr. Leir wrote Mr. Bigler on January 6, 1942:

> "In any case, we wish to say that it is of course the tendency of the U.S. Vanadium and the Vanadium Corp. of America to firmly establish their monopoly by getting hold of all sources of vanadic acid, so as to impede the operations of their sole competitor, the Apex Smelting Company." (Pl. Ex. 131, R. 2237.)

Six days later, on January 12, 1942, Apex wrote to Blanding:

> "We have your letter of January 9th, and we regret exceedingly to note that you are compelled to dispose of your material in your district, as we enjoyed doing business with you, and we were looking forward *to receiving increased amounts from you.*" (Pl. Ex. 131, R. 2239.) (Emphasis added.)

In February 23, 1942, Blanding wrote to Apex that "We regret that we are unable to sell our product to you, however, you are aware of our set-up and the fact that we are merely operating under a lease". At that time Apex, it may be inferred, knew that Blanding was talking of VCA. (R. 2241; Pl. Ex. 131, R. 2237, 1242; Pl. Ex. 157, R. 2341.

1791.) The tactics used by VCA to acquire this lease, and thereby corral the Blanding production for VCA, eliminate Blanding as a supplier to petitioners and Apex are set forth in Petitioners' Opening Brief at page 34.

So it was that Apex could not continue, being faced with losses in a business which had inadequate supplies to permit it to operate successfully. (Pl. Ex. 144, R. 2266, 1313; Pl. Ex. 145, R. 194, 1315; Pl. Ex. 146, R. 2270, 1320; Df. V.'s Ex. V-1-Q, R. 2512A, 1145; Bayer, R. 1301, 1302, 1305, 1313, 1319; Leir, R. 1070, 1079.)

After the loss of Apex, petitioners were never able to arrange for the production of ferrovanadium on a sound dependable basis.

2. **CLIMAX: The proof of an existing contractual arrangement with Climax supports the inference that continued production would have been sustained but for respondents' threats of reprisal.**

The record contained proof of continued acts of impact and contact on petitioners' business after the loss of Apex. Petitioners offered to prove that they were told to stay away from Climax by Union Carbide, who, in this respect, engaged in the boldest kind of conduct in restraint of trade. It is no answer to say that there was no evidence of the effect of this threat when it is admitted that prior to the threat, petitioners had entered into an arrangement with Climax under which Climax was to produce 20,000 pounds of ferrovanadium for petitioners' account. (Pl. Ex. 111, R. 182, 1014.) Since the boast of the respondents is that they supplied 10,000 lbs. of vanadium oxide for this toll milling, it would be only honest for them to explain why if Union Carbide was so helpful in supplying

the 10,000 lbs. they could not continue to supply petitioners. Instead, respondents attempt to direct this Court's attention to an argument that petitioners did not show that the threat was successful. Yet the threat by Carbide was coupled with a point blank denial by Electromet, its subsidiary, to supply petitioners with 10,000 lbs. of V contained in pentoxide per month. (Df. U's Ex. U-4-M, R. 581, 955.) The record shows that in 1943, a year of great demand for ferrovanadium, in a period when sales were no problem, petitioners were able to sell only 10,000 lbs. of ferrovanadium for the obvious reason that they had no production to sell. (Pl. Ex. 119, R. 2212, 1089.) We are told by respondents that not a single piece of paper suggests that the threats were ever carried out. (VCA Brief, p. 40; UCC Brief, p. 54.) But a threat of reprisal is completed when the threat is made to the competitor. The threat is a completed overt act illegal in itself under the antitrust laws. *United States v. Kissel*, 218 U.S. 601 (1910). As part of a continuing conspiracy it is pro tanto injurious. *Albert Pick-Barth Co. v. Mitchell Woodbury Corp.* (1 Cir., 1932), 57 F.2d 96.

3. **IMPERIAL: The specific reason assigned by Imperial for its unwillingness to produce ferrovanadium was its inability to obtain ample sources of vanadium-bearing materials.**

The ultimate significance of Imperial's refusal to produce vanadium products is that it, a leading American corporation, corroborated petitioners' contention that entry into the vanadium industry required a steady, certain, dependable source of supply. Imperial wanted dependable sources "from whom we can always obtain vanadium bearing materials at a price which will enable

us to manufacture." (Pl. Ex. 114, R. 185, 1022.) On December 5, 1944, Imperial wrote to petitioners:

> ". . . we would have to have more confirmation than we have been able so far to obtain that there are, and always will be, ample sources of vanadium bearing material, . . ." (Id., R. 185.)

Later, on April 5, 1945, Imperial stated:

> "The viewpoint we have now is that this whole production of Vanadium Oxide is dependent largely upon having a satisfactory source of supply of raw material in sufficient volume." (Pl. Ex. 115, R. 2179, 1023.)

Imperial was interested in making both its own vanadium oxide and ferrovanadium or in making the ferrovanadium from vanadium oxide purchased at a higher market price. (Pl. Ex. 115, R. 2181.)

Bodies of vanadium bearing ores were known to Imperial, but these offered no substitute for an assured, dependable source of uniform ores or oxides. (Wolf, R. 883-884, 891.) The basic fact is that the monopolization of the Plateau had reduced the petitioners and Imperial to exploring all sorts of alternatives which Imperial found to be so inadequate, undependable and insufficient that it could not enter into the vanadium business. The monopolization thereby was a complete success. Control of the basic American mills and ore supply gave respondents control over the vanadium industry in much the same fashion that control over the virgin aluminum ingot ore gave the Aluminum Co. control over the seconds market. *United States v. Aluminum Co. of America* (2 Cir. 1945), 148 F.2d 416.

The other sources of vanadium supplies were shown not to be a substitute for respondents' monopoly power, which in 1943 was 100% in both the domestic millsite production of vanadium oxide and ferrovanadium. The rejection of production by Imperial then also answers the other possibilities respondents claim were open to Leir. (VCA Brief, p. 43.) Respondents' citation to Ex. U-4-B, R. 936-937 shows that in January 1944 the only material available to petitioners was 50,000 lbs. of oxide without possibility of any more. Petitioners deemed that the blocks or lumps of oxide at Durango mentioned in this memorandum would not be ground by Carbide. (Id.)

4. **DURANGO:** Petitioners have always asserted that the acquisition of the Durango mill interfered with the development of the plans of the independents to form an association.

In their briefs respondents claim that petitioners are now for the first time claiming interference with the forming of an independent association on the Plateau by Leir and other independents. (UCC Brief, p. 56; VCA Brief, p. 43.)

In Petitioners' Opening Brief in the Ninth Circuit it was asserted, at page 28:

> "Mr. Leir attended meetings in March, 1944, with independent operators with respect to an independent mill site on the Colorado Plateau. (Tr. 1774-1780; see Plfs' Ex. 158, dated March 17, 1944, Tr. 23533). Nothing could be materialized."

And in their Reply Brief in the Ninth Circuit petitioners urged the same matters appearing at page 28 of their Petition for a Writ of Certiorari in this Court. It was expressly stated,

"In so doing they thwarted Mr. Leir's plans to form an independent cooperative association of miners and millers."

The record is clear that respondents learned of the meeting of Leir, Bigler, Sitton and others in the middle of February, 1944. (Df. V's Ex. V-2-K, at R. 2536.) Bigler specifically remembered that Sitton was at this meeting, which included the discussion of the formation of an association and the building of an independent mill. (R. 1776.) USV sought to discourage any possibility that Brinker (Blanding) and Sitton would have to acquire the Durango mill. The wire from Burwell to Haldane advising him that Brinker and Sitton were planning to acquire the Durango plant is dated February 29, 1944. (Pl. Ex. 37, R. 148, R. 243.) Burwell specifically testified under oath that the only reason for the acquisition of the Durango mill was to keep control of the production of vanadium and to keep outsiders out of the vanadium business. (R. 246.)

The record, taken as a whole, shows that respondents were always at the opportune place at the opportune time to preempt competition and to stifle any competitive operation which was showing any signs of succeeding. However, respondents claim these preemptions affected no one and had no effect on the market place. Yet these preemptions resulted in the complete effective domination of the market and the forestalling of all competition as condemned by the *Aluminum* case, which was affirmed by this Court in *American Tobacco Co. v. United States*, 328 U.S. 781 (1946).

Each passing year showed the elimination of competitive opportunities. First petitioners' suppliers were lost in 1940, 1941. Then petitioners' associate, Apex, was lost. Then during 1942 to 1944 all the independent mills were thwarted on the Plateau. And finally petitioners had to rely on Imperial's undertaking the production of vanadium oxide and ferrovanadium from sources outside the United States because of respondents' monopoly power. (R. 896.) This substitute was held by Imperial to be futile. There is no question that by 1945 respondents had successfully eliminated any possibility of manufacturing oxides and ferrovanadium in competition to them.

C. The proof of damages or the attempted proof of damages by petitioners complied with applicable law.

The history of petitioners' business was offered.

Respondents now for the first time assert that petitioners have avoided and omitted all pertinent evidence relating to the asserted loss of sales and profits. (Brief of UCC, p. 57 et seq.) Much effort is made by respondents to show that petitioners did not prove they lost sales. But petitioners proved much more. Petitioners proved that they lost their manufacturing associates and were excluded from all aspects of an industry, i.e. production, distribution and sales.

Respondents also assert petitioners failed to show net profits and that there was a failure to allocate operating expenses. But petitioners showed that their business was comparable to the loss of gross profits in a motion picture antitrust case. Leir specifically testified that overhead would not have increased had he sold vanadium products.

(R. 1110-1111.) The net profit figures of petitioners' overall business were erroneously excluded by the trial Court and this was assigned as error. (Pl. Ex. 121 for Id., R. 469.)

In summary the evidence showed as follows: (1) A decline in sales and profits after 1942 and a further showing of inability to produce, distribute or sell vanadium products. (Pl. Ex. 119, R. 2212, 1089; Pl. Ex. 120, R. 2213; R. 1094.) (2) Profits were made during the Apex period when petitioners had production. (Id.) (3) The spectacular comparison of the growth of sales of fluorspar. (Pl. Ex. 123 for Id. only, R. 536.) (4) The comparison of the growth of the Continental Ore Group in the post war period. (Pl. Ex. 124 for Id. only, R. 537, et seq.)

The jury would have had before it the complete balance sheets and profit and loss statements of the petitioners, the comparison of the free market aspects of their business as contrasted to the vanadium portion of their business, the production, sales and profits of respondents, the expert testimony of men such as Leir and Wolf (men with a proven ability to succeed), the production of Apex and its relation to the total production of ferrovanadium (Pl. Ex. 139 for Id. only, R. 543), the complete record of total production of ferrovanadium by respondents from 1939 to 1949 and the estimated loss of profits based on a gross profit percent of sales factor. (Pl. Ex. 141 for Id., R. 545.) Petitioners produced substantially more evidence than that upheld by this Court in *Bigelow v. RKO Radio Pictures*, 327 U.S. 251 (1946)—the decline of sales, profits and values and the loss of sales, profits and values in the restrained market as contrasted with the free market.

Respondents place great reliance on *Herman Schwabe Inc. v. United Shoe Machinery Corp.* (2 Cir. 1962), 297 F.2d 906. But respondents successfully excluded petitioners net profit history upon which petitioners relied to establish damages and which the *Schwabe* case found lacking. (R. 1083-1088; 1095-1096; Pl. Ex. 121 for Id. only.)

Petitioners attempted to follow the standards set forth in this Court's opinions and in *William H. Rankin Co. v. Associated Bill Posters of U.S.* (2 Cir., 1930), 42 F.2d 152 and *Locke v. Stearns, Welch Grape Juice Co.* (4 Cir., 1917), 240 Fed. 114. Respondents objected below.

Petitioners' proof of damages thus closely followed cases specifically referred to and approved by the Second Circuit in the *Schwabe* case.

Petitioners did as the *Schwabe* case suggested in footnote 7. They took their actual proportions of production during the Apex period as contrasted to the production of respondents and projected this forward until 1949.

Mr. Wolf specifically testified that fluorspar afforded a reliable guide as to what vanadium sales might have been in the absence of restrictions. R. 855 stricken.

Unlike the plaintiffs in the *Schwabe* case, petitioners had a demonstrated production and sales record in vanadium which declined and became nil.

III

THE BIGELOW CASE REJECTED THE USE OF MINORITY VIEW "LEGAL CAUSE" CONCEPTS USED IN NEGLIGENCE CASES IN ACTIONS BASED ON THE INTENTIONAL INTERFERENCE WITH THE FREE MARKET AND A BREACH OF CONGRESSIONALLY IMPOSED DUTIES.

The plain issue before this Court in *Bigelow* was whether or not an illegal conspiracy to establish a fixed system of film distribution was the proximate cause of loss of patronage. The Seventh Circuit opinion specifically stated that the issue was one of the fact of damage. (150 F.2d 877.) It attempted to distinguish the *Story Parchment* decision on this ground. In the *Bigelow* case, the lower Circuit Court interpreted the *Story Parchment* and the *Eastman Kodak* cases in precisely the same manner as the respondents do here.

But this Court in *Bigelow* compared the private antitrust action to cases of intentional wrongdoing where upon the showing of liability, the doing of an intentional act plus impact or contact, the wronged party is to be placed in as good a position as if the wrong had not been done. Thus in *Martin v. Herzog* (126 N.E. 814, 228 N.Y. 164), cited by the learned Court below, Judge Cardozo specifically declared that the result would have been different if the defendants had run into the buggy purposely. (126 N.E. 816.)

In an intentional tort, damages are awarded for all the natural consequences of the wrongful act. To speak in terms of "causation" in such a setting by looking upon petitioners' business judgments as a superseding or intervening cause manifestly changes the private antitrust case from a case of judicial enforcement of legislative pro-

nouncement into a judicial analysis of a plaintiff's business judgment viewed from a hindsight position. But such an analysis assumes liability on the part of the defendants and, if applied, allows the wrongdoer to violate the anti-trust laws with impunity. We respectfully submit that a conspiracy to monopolize followed by predatory acts committed against the business of a competitor attempting to compete creates liability and the right to damages, based on relevant data, when it is shown that the competitor is unable to enter the market place after persistent and bona fide efforts and a prior history of sales and profits. *Story Parchment Co. v. Paterson Parchment Paper Co.*, 282 U.S. 555 (1931).

IV

PETITIONERS' OFFER OF PROOF WAS SUFFICIENT TO PRESENT THE ISSUES TO THE COURT.

Respondents' argument as to petitioners' Offer of Proof concerning respondents' interference with petitioners' business in Canada is totally without merit.

From the first day of trial in this case, respondents took the position that petitioners could not offer any evidence on their elimination from the Canadian market. (R. 125.) The trial Court adopted this position and sustained any and all objections made by respondents concerning any reference to the Canadian exclusion. Counsel for respondent Carbide stated specifically that "the Canadian situation should not be a part of this lawsuit". (R. 801.) The Court agreed, and, as a result, excluded all references in

that respect. Now respondents claim that petitioners did not make a complete offer of proof because it lacked certain specifics which respondents themselves prevented petitioners from showing because they objected to the Canadian exclusion and any references to it.

Be that as it may, petitioners respectfully submit that the offer of proof by petitioners on the Canadian exclusion of petitioners showed what the substance of the proposed evidence was, which is all that is required in any offer of proof. *Iva Ikuko Toguri D'Aquino v. United States* (9 Cir. 1951), 192 F. 2d 338, 374.

The applicable rule was stated by this Court in *McCandless v. United States* (1936), 298 U.S. 342, 346, as follows:

> "An offer of proof cannot be denied as remote or speculative because it does not cover every fact necessary to prove the issue. If it be an appropriate link in the chain of proof, that is enough."

There is no question whatsoever in this case as to what petitioners offered to prove. The offer of proof speaks for itself and requires no analysis such as respondents give it in their briefs.

None of the cases cited by respondents in their briefs, particularly those appearing at page 48 of Respondent Carbide's brief, are in point. The cases cited there, with the exception of *Talon, Inc. v. Union Slide Fastener, Inc.* (9 Cir. 1959), 266 F. 2d 731, are cases where *no* offer of proof was made, which is not the case here. The *Talon* case involved a rejected offer to prove hypothetical prices, which is also not involved here. There was nothing hypothetical in petitioners' offer of proof.

It is illogical for respondents to argue that the offer of proof made as to the Canadian exclusion was ineffective because it was not complete in all minutiae in view of the fact that the applicable authorities hold that "a formal offer of proof is not necessary where the record shows, either from the form of the question asked or otherwise what the substance of the proposed evidence is" *Iva Ikuko Togari D'Aquino v. United States, supra,* at page 374; *Meaney v. United States* (2 Cir., 1940), 112 F. 2d 538. Cf. *Buckstaff v. Russell & Co.*, 151 U.S. 626 (1894).

As stated by Judge Frank in *Hoffman v. Palmer* (2 Cir. 1942), 129 F. 2d 976, 994:

> "Such an offer of proof, while provided for by Federal Rules of Civil Procedure, rule 43, 28 U.S.C.A. following section 723c (cf. 3 Moore's Federal Practice, 3076, 3077), is not absolutely essential, if it is otherwise entirely clear what the alleged error is. Meaney v. United States, supra."

It cannot be seriously questioned that this record shows clearly what the alleged error is and that the offer of proof more than adequately establishes the issue presented by the trial court's refusal to admit the Canadian evidence.

In addition, Mr. Arrouet's statements were admissible on various grounds:

(1) They were made by an agent who, petitioners showed, was prima facie authorized to speak for Electromet. 2 Mechem *On Agency* (2d ed.), §§ 1778, 1779; (2) They were statements made as part of the res gestae; i.e., to explain the conduct of Electromet in settlement of

petitioners' complaint and protest against Electromet. 2 Mechem *op. cit. supra* §§ 1781-1783; and (3) They were admissible as affirmative circumstantial evidence to show that petitioners were entitled to rely on Arrouet's statements in the conduct of their business.

The testimony in the record is uncontradicted that after petitioners registered a complaint to Electromet in New York, it voluntarily called petitioners and asked them to come in to discuss the complaint, telling them where to call and the person to whom they were to speak. Wolf followed their directions. Wolf knew Arrouet and it was respondents who designated him as the individual authorized to act and speak for them and to represent them in this matter.

General Finance, Inc. v. Stratford (D.C. Cir. 1940), 109 F. 2d 843 is squarely in point. In that case, the Court stated at page 843:

> "Appellant objected to this testimony, and contends that the statements of Hausenblus should have been excluded as hearsay. We think they were properly admitted against appellant, as admissions which appellant had authorized Hausenblus to make in its behalf. 'Where one person is sent by another to a third party for information in reference to an uncertain or disputed matter, the person sending is bound by the declarations of the party to whom he was referred, as if they were made by himself', i.e., they are admissible in evidence against him. Allen v. Killinger, 8 Wall. 480, 486, 487, 19 L. Ed. 470. 'The admissions of a third person are receivable in evidence against the party who has expressly referred another to him for information in regard to any uncertain or disputed fact.'" (Citing cases.)

This case is consistent with the holding in *State Farm Mut. Auto Ins. Co. v. Porter* (9 Cir. 1950), 186 F. 2d 834, in which the Court stated at pp. 841-842:

> "We believe a jury could well find as a fact that a person employed as a claim adjuster had at least apparent or ostensible authority to adjust claims and such would include negotiations for settlement. Special instructions as to what he was to do on this particular occasion, not divulged by him to the other party, would not constitute a limitation on his real or apparent authority . . . Where the special character of the agency is not known, and the principal has clothed the agent with apparent powers, strangers, in dealing with the agent, may assume that such apparent powers are possessed. The principal cannot, by private communications with his agent, limit the authority which he allows the agent to assume" (Citing *Robinson v. American Fish & Oyster Co.*, 17 Cal. App. 212, 219, 119 P. 388, 389.)

See also *Johnson v. J. H. Yost Lumber Co.* (8 Cir. 1941), 117 F. 2d 53; Restatement of Agency (2d ed.), § 286.

It is fundamental that whether a person is an agent and the scope and extent of his authority are questions to be decided from all the facts and circumstances and that these questions are to be decided by the trier of fact. 2 *Am. Jur., Agency*, § 454; 2 *Mechem On Agency* (2d ed.) § 1785. At the very least, Arrouet's authority, as well as the scope of that authority, were questions which were properly determinable by the trier of fact under proper instructions by the Court. 2 *Am. Jur., Agency*, § 454.

V

THE CONSPIRACY OF RESPONDENTS TO MONOPOLIZE THE VANADIUM INDUSTRY AND TO ELIMINATE ALL COMPETITION, INCLUDING PETITIONERS', TOOK PLACE IN THE UNITED STATES. THE ELIMINATION OF PETITIONERS' CANADIAN CUSTOMERS BY PREVENTING PETITIONERS FROM EXPORTING VANADIUM INTO CANADA TOOK PLACE IN THE UNITED STATES. THE FACT THAT RESPONDENTS USED ONE OF THEIR CANADIAN SUBSIDIARIES WHICH HAD AN AGENCY AGREEMENT WITH CANADA TO ASSIST THE ELIMINATION DOES NOT GIVE RESPONDENTS ANTITRUST IMMUNITY.

A. The Sherman Act reaches the private use of lawful powers delegated by a foreign government when used to interfere with domestic commerce and stifle American industry pursuant to a conspiracy to create a monopoly in the United States.

The elimination of petitioners from Canada was merely part of an overall conspiracy to monopolize the whole vanadium industry. Even if petitioners' elimination from Canada were lawful, which it was not, since it was part of an illegal scheme to monopolize the whole industry, the entire combination and conspiracy is stricken down by the Sherman Act. (*United States v. Bausch & Lomb Optical Co.* (1944), 321 U.S. 707; *American Tobacco Co. v. United States* (1946), 328 U.S. 781, affirming 147 F. 2d 93 (6 Cir. 1944); *Aikens v. Wisconsin*, 195 U.S. 194 (1904). The record shows that the conspiracy started in 1933, long before any foreign government agency was involved, and continued on at least until the time of the complaint. Part of that over-all conspiracy was the elimination and destruction of petitioners' business, including shipments into Canada.

In spite of respondents' efforts to the contrary, petitioners repeat that this is not an action against the

Canadian government nor against the Office of Metals Controller of Canada. It is an action against two American companies for activity *in the United States* with the purpose of destroying petitioners' business in the United States. The conduct which created and brought about this specific result was carried out in the United States, by United States companies, by United States actors. The Canadian subsidiary, and its discretionary power to select the persons from which it would purchase vanadium were used by the illegal combination created and operated in the United States to insure the demise of petitioners. (Pl. Ex. 93, R. 451, 821.)

Respondents rely on *American Banana Co. v. United Fruit Co.*, 213 U.S. 347 (1909), which involved the confiscation by the Costa Rican government of plaintiff's plantation and properties in Costa Rica. It is respectfully submitted that the limited holding in *American Banana* is not applicable to the facts of this case, and that *United States v. Sisal Sales Corp.*, 274 U.S. 268 (1927), is controlling. In the *Sisal* case, this Court held illegal a conspiracy to monopolize foreign commerce in sisal. The Court noted that laws favorable to the Mexican agents in the conspiracy were solicited and secured from the governments of Mexico and Yucatan, and that the governments of both Mexico and Yucatan were persuaded to pass discriminatory legislation and all other buyers were forced out of the market. Despite this government involvement, the Court stated (p. 276):

> "Here we have a contract, combination, and conspiracy entered into by parties within the United States and made effective by acts done therein. The fundamental object was control of both importatio

and sale of sisal and complete monopoly of both internal and external trade and commerce therein. The United States complain of a violation of their laws within their own territory by parties subject to their jurisdiction, not merely of something done by another government at the instigation of private parties. *True, the conspirators were aided by discriminating legislation, but by their own deliberate acts, here and elsewhere, they brought about forbidden results within the United States. They are within the jurisdiction of our courts and may be punished for offenses against our laws.*" (Emphasis added.)

See also: *United States v. Aluminum Co. of America* (2 Cir. 1945), 148 F.2d 416; *United States v. Pacific and Arctic Railway & Navigation Co.*, 228 U.S. 87 (1913); *United States v. National Lead Co.*, 63 F.Supp. 513, (S.D. N.Y. 1945) aff'd 332 U.S. 319 (1947); *United States v. Timken Roller Bearing Co.*, 83 F.Supp. 284 (N.D. Ohio 1949), aff'd 341 U.S. 593 (1951); *Steele v. Bulova Watch Co.*, 344 U.S. 280 (1952); *Sanib Corporation v. United Fruit Company* (S.D. N.Y. 1950) 135 F.Supp. 764; *In re Grand Jury Investigation of the Shipping Industry* (D.D.C. 1960), 186 F.Supp. 298, 319; *United States v. Imperial Chemical Industries* (S.D. N.Y. 1952), 105 F.Supp. 215.

B. An agent of a foreign country engaged in purchasing United States commodities is not afforded sovereign immunity. Manifestly if a government corporation is not afforded immunity a purely private commercial corporation cannot acquire immunity.

Respondents advance the claim of foreign governmental immunity. But the Canadian government's appointment

of Electromet of Canada to acquire vanadium products from the United States did not authorize it to carry out such purchases so as to restrain trade or monopolize trade in violation of the antitrust laws. *United States v. Deutsches Kalisyndikat Gesellschaft* (S.D. N.Y. 1929), 31 F.2d 199.

The claim of governmental immunity, we respectfully submit, seeks to attach governmental authority to bold practices which cannot be attributed to Canadian officials. Canadian officials referred the complaints of petitioners to Union Carbide's subsidiary Electromet in New York City. (Pl. Ex. 80, R. 438, 805.) The government of Canada through the Office of Metals Controller cannot be deemed to have had any knowledge of the agreements of the respondents to control and dominate the vanadium industry.

Respondents have not and cannot point to any evidence in the record showing that the Canadian government authorized Union Carbide to conspire with VCA to destroy petitioners, nor any ratification of that conspiratorial conduct. Petitioners offered to prove that the Canadian government was totally oblivious to the purpose for which Electromet of Canada decided not to deal with petitioners (R. 828-831) and offered to prove that Union Carbide, pursuant to its conspiracy with VCA, directed Electromet of Canada not to purchase from petitioners. (R. 826-828.) Whereas petitioners sold to Canadian customers prior to the appointment of Electromet of Canada (Pl. Ex. 79, R. 2174), after the appointment *only VCA and Union Carbide* were able to sell and ship to Canadian customers. (Pl. Ex. 17, R. 127, 133.)

Just like instrumentalities of the United States, corporate entities of foreign countries which do business in this country are subject to the laws of the United States, including the antitrust laws. (*United States v. Deutsches Kalisyndikat Gesellschaft* (S.D. N.Y. 1929), 31 F.2d 199; *Bank of U.S. v. Planters' Bank of Georgia*, 9 Wheat. 904, 907 (1924); *Coale v. Societe Co-op Suisse des Charbons* (S.D. N.Y. 1921), 21 F.2d 180. Certainly, no foreign governmental immunity of any kind would attach to two private companies, Union Carbide and VCA, which used Electromet of Canada as part of an overall, preexisting conspiracy, to monopolize the vanadium industry.

C. Cases such as Parker v. Brown, 317 U.S. 341 (1943), holding that state action as distinguished from private action does not come under the antitrust laws are not in point.

In their answering briefs, respondents rely on such cases as *Parker v. Brown*, 317 U.S. 341 (1943), *United States v. Rock Royal Co-op*, 307 U.S. 533 (1939), *Olsen v. Smith*, 195 U.S. 332 (1904), and *Okefenokee Rural Elec. Mem. Corp. v. Florida P. & L. Co.* (5 Cir. 1954) 214 F.2d 413, which we respectfully submit are not applicable. Those cases advance the proposition that a legislatively-created monopoly is without the ambit of the antitrust laws and that *state action* as distinguished from private action does not come within the antitrust laws. Petitioners here are not seeking to invalidate any legislation on the ground that it violates the Sherman Act, nor are they seeking to undo the action of a state in creating a monopoly. For example, the *Parker* case was an injunction case seeking to enjoin official state action created by the legislature involving an overall detailed legislative program

adopted by the state. The *Parker* case itself recognizes that even a legislatively created monopoly is not *per se* outside the ambit of the antitrust laws. This Court stated (pp. 351-352):

> "There is no suggestion of a purpose to restrain state action in the Act's legislative history. . . ."
>
> "True, a state does not give immunity to those who violate the Sherman Act by authorizing them to violate it, or by declaring that their action is lawful, [case cited]; and we have no question of the state or its municipality becoming a participant in a private agreement or combination by others for restraint of trade [case cited]. . . ."

In the *Okefenokee* case, the Court found that the validity of the order involved could be attacked only in an action on mandamus, that there was no interstate commerce involved, and that the subject matter was exclusively within the jurisdiction of the administrative board. Furthermore, the later case of *Crammer Co. v. Du Pont* (5 Cir. 1955), 223 F.2d 238, cert. denied, 350 U.S. 848, from the same circuit, in effect explains away the *Okefenokee* case and clearly holds that a violation of the antitrust laws can occur even though the most important element of the conspiracy in attaining its objective is by secretly moving under the guise and protection of the public interest and through the public authorities.

D. Union Carbide and VCA are both liable for all injuries resulting from the overall conspiracy.

Again, this is an action against two private American companies which conspired to monopolize an industry and used a private Canadian corporation which had an agency

agreement with Canada to bring about the demise of the petitioners. There is no evidence in the record that any government authorized Union Carbide and VCA to conspire to monopolize the vanadium industry and to eliminate petitioners, and to insure the complete elimination by cutting off petitioners' right to ship their products into Canada. The elimination was caused by the American conspiracy, by the acts of private companies, by conduct taking place in the United States. VCA and Union Carbide both were members of that overall conspiracy and obviously both are responsible for any and all injuries resulting therefrom. The fact that one member of the conspiracy may have been the active partner in certain phases of the overall conspiracy does not insulate the other member. (*Chattanooga Foundry & Pipe Works v. Atlanta*, 203 U.S. 390 (1906).)

E. The Noerr case holds that the Sherman Act does not control joint action to lobby or to influence the passage of legislation.

As discussed in greater detail in petitioners' opening brief, it is respectfully submitted that the *Noerr* decision is not applicable to the facts of this case and was not intended to apply to the exclusion of competition accomplished under and pursuant to the terms of a conspiracy to monopolize an industry by predatory business tactics, even though part of the conspiracy included the use of the discretionary power to control purchases of vanadium given to one of the conspirator's Canadian subsidiaries by the Canadian government. Such traditional, predatory conduct has always been held to violate the Sherman Act and the *Noerr* decision has not changed this. Here there was an express showing of a classic divi-

sion of the market between respondents as to American production of vanadium and the in fact elimination of Mr. Leir's ability to continue as a competitor in vanadium both as to interstate and foreign commerce.

CONCLUSION

The trial Court committed error in excluding all evidence as to petitioners' elimination from Canada and in rejecting Petitioners' Offer of Proof in this regard. The trial Court clearly committed prejudicial error that cannot be corrected by return to the Ninth Circuit.

For the foregoing reasons petitioners respectfully request that the Court reverse the judgment entered herein and remand the action to the District Court for retrial.

Dated, April 12, 1962.

Respectfully submitted,

JOSEPH L. ALIOTO,
MAXWELL KEITH,
RICHARD SAVERI,
G. JOSEPH BERTAIN, JR.,
